# We Welcome You

Welcome to new and returning clients for the 34<sup>th</sup> Annual Haddon Rig Merino and Poll Ram Sale. Thank you very much for your continued support.

The HR Stud Team is looking forward to presenting the 2016 drop Haddon Rig Merino and Poll Merino rams to our valued clients at the On-Property 2-Tooth Sale on Thursday 7th September 2017 at 1 pm. This year we have increased the numbers in both teams to meet demand and provide buyers with a better selection of more affordable rams. We will be offering 150 top quality merino rams and 60 premium poll merino rams for auction in front of the Haddon Rig homestead. The rams are well grown and even with exceptional figures and quality white wool.

The rams will be penned for inspections and registration is from 9.30am. ASBV's will be available on all auction rams and the sale will start at 1pm. As in 2016 the ram sale will be interfaced with Auctions Plus again this year. This will provide buyers the opportunity to follow the auction if they cannot attend the sale on the day, please contact Andy Maclean to organize an inspection prior to the sale.

Yours Sincerely,  
*Haddon Rig Merino Stud*

# Understanding ASBV's

ASBV's are the units of measurement MERINOSELECT use to analyse animals.

Australian Sheep Breeding Values are an estimate of the animal's true breeding value based on pedigree and performance recorded information.

They are essentially a projection of how the animal's progeny will perform for a range of traits and can be used as a guide to assist in your ram selection.

## **ASBV's Traits Measured by Haddon Rig in 2016:**

### **Weight (YWT)**

ASBV's describe the animal's genetic merit for growth rate. A positive ASBV means the animal is genetically faster growing. Weight ASBVs are available for weaning (100 days), and yearling (YWT), adult weight

### **Fat Depth (YFAT):**

ASBV's describe the value of an animal's genes for fat depth at a constant weight – a negative ASBV means a genetically leaner animal.

### **Eye Muscle Depth (YEMD):**

ASBV's describe the value of animal's genes for eye muscle depth at a constant weight – a positive ASBV means a generally thicker-muscled animal, and one that will have slightly more of its lean tissue in the higher-priced cuts.

### **Fleece Weight (FW):**

This within-flock dataset describes the value of animals' genes for fleece weight. Animals with more positive FW figures are genetically heavier-cutting.

### **Standard Deviation (SD):**

A measure (in microns) either side of the mean fibre diameter in which 68% of fibres lie.

### **Coefficient of Variation (CV):**

The fibre diameter variation expressed as a percentage of standard deviation and mean fibre diameter.

**Fibre Diameter (FD):**

ASBVs describe the value of an animal's genes for finer or coarser wool – a negative ASBV means a genetically finer animal. In addition fibre quality measurements such as staple length, staple strength, CV and curvature can be converted into ASBVs

**Greasy Fleece Weight (GFW%):**

This is the yearling fleece weight measured as a percentage.

**Merino Production Index (MP+):**

The merino production index ranks animals on their ability to produce progeny for a medium wool operation that has significant surplus sheep sales. The index is aimed at those producers whose sheep income is a balance of both wool and surplus sheep sales. It is for self-replacing merino flocks who do not keep their wethers to produce wool.

**Dual Purpose Plus (DP+):**

The Dual Purpose (DP & DP+) indexes rank animals on their ability to produce merinos for a dual purpose operation. These indexes are aimed at those producers whose majority of sheep income comes from sheep sales. It is for self-replacing merino flocks that do not keep their wethers and also join a portion of their ewes to terminal sires for lamb production.

**Comfort Factor (CF):**

The percentage of fibres less than 30 microns. i.e.: 100% Comfort Factor = 0% of fibres greater than 30 micron.

**Body Weight (BdW):**

Current body weight.
