	<b>Comment</b>	Low birth weight flush brother to lot 52. Fertility is one of the most important determinants of profitability and this bull has a fertility EBV in the top 1% of the breed.																				<b>Comment</b>

	<b>Comment</b>	High IMF% and growth and reasonable birth weight. The high fertility EBV traces back to the mother who is a rising seven year old cow due to calve to V A R Legend in six week time. Lot 8 is H107's calf from 2017.																				<b>Comment</b>

	<b>Comment</b>	In evaluating these Grando sons note that they are lean but not lowly fertile. The Days to Calving EBVs suggest the daughters will have better than average fertility for Angus cattle.																				<b>Comment</b>
