WELCOME TO OUR 2019 ROMA SALE

THE SALE WILL BE HELD AT THE ROMA SALE YARDS ON FRIDAY 2 AUGUST 2019 AT 1PM. WE HAVE A FANTASTIC, WELL BALANCED, ELITE LINE-UP OF 60 ANGUS BULLS, WHICH ARE MOSTLY TWO-YEAR-OLD AND A GROUP OF 18-MONTH OLD BULLS. THANKS TO ANDREW HOLT AND COLY EDE AND THE LANDMARK TEAM FOR THEIR CONTINUED SUPPORT.

Like most people we have had a tough year dealing with drought in all our Operations. The most severe impacts were in WA where we experienced the lowest rainfall on record. The on-going drought and big floods in Qld and NSW keeps things in perspective and our thoughts are with all those farmers still battling away.

We have completed setting up our new cell grazing and GrowSafe Feed Efficiency testing Unit at Claremont, Yea, Victoria and hope to finally get bulls out grazing late June after another late break. The majority of this year's Roma bulls have been managed at Victoria and WA until mid-June (as Queensland feed costs are significantly higher and we had no winter cereal grazing options) so please note that is why bulls are a bit hairier this year in the photos. Our bulls have proven over the years that they adapt very well and quickly to Queensland conditions; this is partly their genetics but also they have had to work hard and compete under high stocking rates for all of their life as have their dams for over 50 years.

COST OF PRODUCTION – IT IS ALL ABOUT THE BALANCE BETWEEN INPUTS AND OUTPUTS

The GrowSafe Feed Efficiency testing unit is now fully operational and some of the first Cohort of bulls are offered in the Roma Sale including the #1 ranked Net Feed Intake bull, Lot 1 Lawson's Kodak N961.

We feel the investment in GrowSafe technology and the Feed Intake system will be a valuable genetics and management tool going forward. The GrowSafe Beef (GSB) allows us to weigh animals on a daily basis as they drink, so we not only record daily feed intakes

we also get weight performance in real time. This is the feedback that has been lacking in beef systems and will take our genetics and management systems to another level.

In terms of genetics we see the ability to accurately measure what individual animals eat and their feed conversion rate as an opportunity to fine tune and rank sires for these important traits – Residual Feed Intake (RFI or NFI), Dry Matter Intake (DMI) and Feed Conversion (FC). We know our genetics (and those sourced from GAR) are amongst the most in the Angus breed from the many feedlot trials and feedback from feedlots over many years, however, this allows us to identify and rank animals with greater accuracy and make even greater genetic progress for this important trait.

We are at a stage where we have most of our herd in optimal ranges for most economic traits and the timing of being able to put more emphasis on feed efficiency is perfect. Breedplan is an amazing tool and describes animals for a wide range of economic very well, but most of the traits (with the exception of MCW) are based on outputs, whereas in farming systems getting the balance right between inputs and cost of production and outputs (like growth) is critical for beef farmers. This is the start of a great learning journey for both us and our clients and we look forward to sharing this information with you as we progress.

2019 Roma Sale Bulls

The bulls this year are a fantastic line-up of elite, well balance grazing machines! Nothing single dimensional about these bulls – they really do epitomise what multi-trait excellence is all about. There are large lines of uniformed consistent genetics that excel in calving ease, growth, moderate mature size and elite carcass genetics.

This year's bulls are sired by the world's leading performance Angus sires including GAR Prophet, GAR Prophecy, GAR Sure Fire, GAR Momentum, GAR Sunrise, Ayrvale Bartel E7, Lawsons Incredible H803, Lawsons Prosperity H382, Paringa Judd J5, Lawsons LinkedIn L483, Alloura Get Cracking G10 and Rennylea Kodak K522, are all well balanced that will make a valuable contribution to any breeding program whether in the south or crossbreeding in the north.

This year's 60 Sale bulls rank at the top end of the Angus breed on many levels including:

- 54/60 (90%) of bulls have a calving ease tick ✓ and 77% are positive Calving Ease Direct (DIR)
- Top 35% for Calving Ease Direct (DIR) and lowest 25% for Birth Weight (BW)
- Top 15% of the breed for Heavy Grain Fed Index (GRN), Domestic Index (DOM) and Angus Breeding Index (ABI)
- Top 35% for 600D Growth
- Below Breed average for Mature Cow Weight (MCW)
- Top 30% for Carcase Weight (CW)
- Top 10% for marbling (intramuscular fat)
- Top 30% for Eye Muscle Area (EMA)

It's easy to breed high Indexing bulls, it's harder and takes a lot of focus and discipline to breed cattle that are able to rebreed in tough seasons and handle high stocking rate pressure. The article opposite from Dorian Garrick highlights the issues we have been raising for many years that Angus need to keep a check on. From the article:

"...HE ESTIMATED THAT MATURE COW WEIGHTS HAD RISEN BY BETWEEN 100 TO 150 KILOGRAMS SINCE HE WAS A STUDENT IN THE LATE 1970s..."

This trend is not only visible in Angus, but applies to a number of breeds as well.

Hopefully many breeders that need to rebuild numbers or as a normal part of their annual breeding program are in a position to retain as many heifers as they can this year. It's important to remember that retaining heifers that are sired by superior bulls is the fastest and most cost effective way of making long term sustainable genetic progress. We've tried to make it easy for those wishing to purchase heifer bulls, basically anything with a red calving ease tick are suitable for yearling heifers, this is 90% of the Sale bulls.

We look forward to seeing you in Roma on 2 August if not before. We appreciate the on-going support of our Queensland clients and hope the next 12 months sees more favourable seasonal conditions.

Regards,

Harry Lawson

Special Article

ANGUS MUST CHANGE ITS 'TERMINAL' BREED DIRECTION, SAYS LEADING GENETICIST.

27 The Land May 2019

WIDER FOCUS: Leading New Zealand geneticist, Professor Dorian Garrick, says Angus breeders need to focus more heavily on measuring and improving maternal traits.

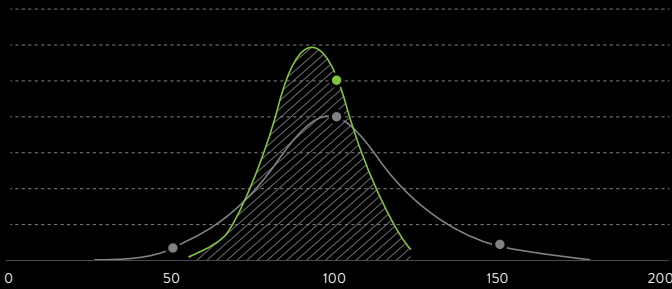

Angus breeders need to broaden their selection beyond the current heavy focus on increasing animal size and carcase weight, according to one of the world's leading animal geneticists. Professor Dorian Garrick, from New Zealand's Massey University, said the industry's concentration on improving a few key income traits had produced tremendous results in the past 40 years but not necessarily for the breeders of young slaughter cattle.

He told last week's "Angus through the Ages" national conference in Albury that the time had come for bull selection to be based on a total merit index rather than the current narrow number of estimated breeding values (EBVs) based largely around improving growth and some of the traits that influence eating quality. These larger cattle were producing offspring that were more beneficial to feedlots, processors and consumers than the cow-calf operators who were breeding them, he said. Professor Garrick likened the total variation in a cattle breed as genetic "cloud" which could be pushed in any direction the industry wanted. Right now the Angus cloud had been pushed too far towards terminal traits at the cost of maternal and other traits that were becoming increasingly critical to the beef sector's future such as reducing the industry's environmental hoof print and improving animal welfare and feed and protein efficiency.

Professor Garrick returned to NZ two years ago after working in the US and used the example of the American Hereford and Angus Associations to demonstrate the impact of moving the genetic "cloud" in different directions. Long-term data from the American Hereford Association revealed breeders had used the advent of ultrasound around 1990 to reduce the selection focus on growth in favour of carcase characteristics. In contrast, data from the American Angus Association showed a continued focus on growth and as a result he estimated that mature cow weights had risen by between 100 to 150 kilograms since he was a student in the late 1970s while they were also producing more milk which increased maintenance costs even when they weren't lactating.

COW EFFICIENCY AND FEED COSTS ON THE RADAR AFTER TOUGH SEASONS – WHAT CAN COMMERCIAL BREEDERS DO TO MANAGE THIS?

Now is a good time to sell older cows and assess your current bull team. If you can't retain all your heifers, try to prioritise the ones out of your younger cows even if they are lighter and less attractive than the heavier ones out of mature cows. Angus Australia are promoting the use of genomics Angus Heifer SELECT for commercial breeders at a cost of \$48.50. For most breeders we do not see the return on investment at this point and suggest it would be well down the list in terms of getting an economic return on this investment. This is more than the annualised cost of a bull purchase, which in our program equates to \$25-\$40 per calf depending on bull purchase price and longevity of the bull.

Upgrading the genetics in your bull team and capturing the benefits of these in your cow herd is better served simply by retaining as many heifers as you can by these superior bulls. Genomics is evolving and will become more useful, but in terms of improving profitability in commercial beef herds it's a long way down the list of priorities for most commercial breeders.

The focus should remain on multiplying out good females from superior bulls and short joining these heifers to set them up for a lifetime of productive work. Cashflow and managing feed costs are far more important priorities for beef farmers like us recovering from drought!

These days we place more emphasis on Calving Ease Direct (DIR) than birth weight (BW) or gestation length (GL) are indicative traits. For those breeders mating heifers we recommend you just consider bulls with a calving ease red tick. To get a red tick we considered Calving Ease Direct (DIR), BW and pedigree. In this Sale 54/60 (90%) of bulls have a calving ease tick and 46/60 (77%) are positive Calving Ease Direct (>+1.2 DIR, breed average is +0.2). We take our responsibilities as a seedstock provider seriously and a big reason why commercial breeders still pull too many calves is that most studs have a huge variation in calving ease and birth weight (BW). While they shirk the issue with also sorts of excuses and myths that their cattle are easy calving as they have the right shape, it's the commercial industry that pay the price. Apart from the stress it puts on beef farmers it's also a major animal welfare issue.

EASY CALVING, MODERATE CATTLE ARE LOWER RISK AND LOWER COST, IT'S NOT ROCKET SCIENCE, JUST BASIC ECONOMICS!

"THE AVERAGE DOESN'T TELL THE TRUE STORY, BUT THE BELL CURVE DOES; IT MORE CLEARLY SHOWS THE CONSISTENCY (TIGHTER BELL CURVE) FOR EVERY ECONOMIC TRAIT."

It's important to note these Sale bulls still have plenty of growth and flexibility to hit both grass fed and long fed grain targets with more predictability than other Angus. The massive grass converting potential in these bulls and our females remains a strong focus of our breeding program. These days you really can have it all!

Mature Cow Weight (MCW) is our most important indicator of feed costs and fertility. People talk about fat as the driver for fertility, but fat is secondary to mature cow eight and milk. Selection for fat also reduces feed efficiency as **fat takes four times more energy to put on than a kilogram of muscle**. We prefer to breed moderate, efficient females that still have high feed conversion and yield, efficient/moderate cows can still lay down fat in good times but they also produce faster growing, higher yielding, higher value carcasses.

The Beef Industry has been slow to understand a simple scientific fact that big cows eat more, crash faster in tough times, stop cycling quicker in tough times and have to be either fed more to meet feed requirements or run under lower stocking rates. We wish more people would get it as it makes it tough to find outside Australian sires that meet our criteria. Most high \$ Indexing bulls fall outside our acceptable ranges on calving ease and mature cow weight.

While our plant breeders are making massive in-roads into breeding plants with lower stem and leaf mass (that require higher water and nutrients) and higher yields and improved drought and insect tolerance the Beef Industry keep making our females bigger. Where's the economic sense in that? We get criticised pushing this important issue even though our cows are still big, last year they weighed 640kg at weaning, so they are not small cows by any means and these are around breed average (+91 MCW). When I read catalogues with many bulls >120 on MCW and you see people paying big money for these bulls it doesn't make sense.

MARBLING MATTERS - THE IMPORTANCE OF MARBLING IN BOTH GRASS FED AND FEEDLOTS SHOULD NOT BE UNDERESTIMATED

JBS's Little Joe Super Premium Grass Fed Tomahawk

If you have ever eaten King Island grass fed beef you will know why people rate it so highly, it's king of the MSA grass fed branded products and renowned for it's consistency of eating quality. Part of that is good management and environment, but without the essential ingredient of genetics, King Island and other beef producers will not continue to keep finding the next level like they have in the past.

JBS's world class Little Joes brand takes the premium grass fed-beef up several notches – it has less than a 5% compliance rate (has to be Ausmeat marble score 4+) and those animals that make it get a \$50-\$60/hd premium above their other MSA grass-fed brands. Imagine if you could get a 40% compliance rate? I recall over 25 years ago in the US that CAB average compliance rate was 14%, now some herds conquer this routinely with an 80% CAB compliance.

This extract from Gardiner Angus Ranch (GAR) January 2019 catalogue sums up the importance of marbling on US grids:

As Mark Gardiner puts it "**Marbling is the biggest factor in determining the value of beef per pound.**"

"As evidenced that *"marbling matters"* we point to the value our customers received during the 18-month period from May 2017 to November 2018 when they delivered 5,345 head to U.S. Premium Beef (USPB). A whopping 98% of the cattle delivered by our customers graded Choice or better and 24% graded Prime. As a result our customers took home a total of \$503,012 in premiums (\$94/hd) primarily as a result of carcasses that qualified as Certified Angus Beef (CAB) or graded Prime.

To that point it is not just about reaching the Choice quality grade. The greatest profit comes from reaching the upper two-thirds of the Choice grade or Prime based on marbling. At a time when the plant average for USPB cattle ran at around 65% Choice and 4% Prime, our customers' cattle averaged 98% Choice or better and 27% Prime. Simply put, they captured the added value. You can do this too." Mark Gardiner, Gardiner Angus Ranch.

OUR POINT IS THAT IF YOU ARE GOING TO BREED ANGUS CATTLE YOU MAY AS WELL BE AT THE TOP END OF THE BELL CURVE IN TERMS OF QUALITY AND WE HAVE THE TOOLS AND GENETIC POTENTIAL TO DO THIS WELL WITHOUT COMPROMISING ON-FARM EFFICIENCIES.

MARBLING

■ LAWSONS ■ OTHER

Angus are multi-dimensional and we have a global genetic data base to keep making progress across all important economic traits simultaneously. The key is to stay focused and disciplined and not chase fads or outcross genetics for the sake of being different and on trend! It's great to see our clients starting to reap the rewards and recognition for the quality of their cattle Australia-wide.

We appreciate the trust our clients have in us and will continue to do the best job we can going forward.

We look forward to seeing you on the 2nd of August.

Harry Lawson
Harry Lawson

SINCE 1990, GROWSAFE HAS APPLIED ADVANCED TECHNOLOGY TO MAKE ANIMAL AGRICULTURE MORE EFFICIENT, ECONOMICALLY VIABLE, AND ENVIRONMENTALLY AND ETHICALLY SUSTAINABLE.

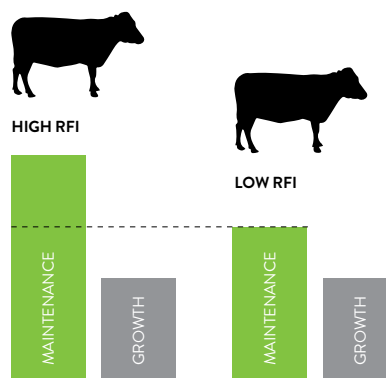

GROWSAFE HAS DEVELOPED AN ADVANCED LIVESTOCK DATA DECISION PLATFORM THAT USES PHYSICAL SENSING, PREDICTIVE ANALYTICS AND COGNITIVE COMPUTING TO MEASURE, MONITOR, PREDICT AND OPTIMISE DECISION MAKING ON FARM. IN 2018, LAWSONS MADE THE INVESTMENT TO JOIN THE GROWSAFE BEEF GENETICS PROGRAM AND START THE JOURNEY OF ON-FARM GENETIC SELECTION FOR FEED EFFICIENCY AS PART OF OUR PROGRAM.

THE PROGRAM

The objective of the Beef Genetics Program is to measure individual animal feed Intake with the GrowSafe Feed Intake measurement unit in parallel with growth with the GrowSafe Beef® measurement unit (records partial body weights as animals drink) and calculate Residual Feed Intake (RFI) to enable selection for the most efficient animals.

This will help us here at Lawsons Angus to raise better bulls that will help make our customers more money with less resources. Since as much as 75% of all production costs comes from feed, a more efficient calf, cow or bull can save you money all year long.

Residual feed intake (RFI) is a measure of feed efficiency that is calculated as the difference between an animal's actual feed intake and it's expected feed intake. RFI is independent of body weight and size. Differences in the trait cannot be detected by physically looking at an animal, it requires accurate and simultaneous measurement of an animal's feed intake and body weight. Animals with low RFI values are more efficient than those with high RFI values. These off test contemporary group calculations with 3 generations of pedigree will then be used to calculate RFI EBVs for genetic selection and benchmarking.

MEASURE. MONITOR. PREDICT. OPTIMISE.

Residual Feed Intake is a trait that you cannot visually appraise, it must be measured to manage. We have started running RFI trials in 2019. The test is a 49 day duration + 10-14 days warm up. Contemporary groups are built post-weaning with similar breed, sex, age (within 90 days), each animal has a unique EID (electronic identification /NLIS) tag that allows the measurement units to identify it.

Animals are fed the same diet and individual feed intake is measured to a 10-gram resolution by the GrowSafe Feed intake measurement units. Partial body weights are taken individually every day, every time the animals come to drink by the GSB measurement unit whose collected data are used to calculate individual predicted daily live weights. Routine weights are collected when animals are handled and this data is correlated during the trial to add to the accuracy and validation of GSB units. The data is collected in a standardised way and at the end of the trial, GrowSafe's analytics team calculate individual DMI, ADG and RFI for the cohort as well as providing the genetic evaluations.

FEED EFFICIENCY: IF YOU DON'T MEASURE IT, YOU CAN'T MANAGE IT.

		
366 KG	WEIGHT	325 KG
1.24 KG/D	ADG	1.23 KG/D
9.58 KG/D (708 KG)	EXPECTED FEED INTAKE	9.29 KG/D (688 KG)
11.04 KG/D (817 KG)	ACTUAL FEED INTAKE	7.95 KG/D (588 KG)
1.46 KG/D (+108)	DIFFERENCE	-1.34 KG/D (-99.2)

Lawsons Angus first cohort of bulls in our on-farm GrowSafe system that measures individual Feed Intake. We calculate individual Residual Feed Intake (RFI) and Dry Matter Intake (DMI) EBVs along with average daily gain (ADG) data.

GrowSafe beef (GSB) units measure body weight allowing us to record weights on a daily basis – this is a powerful management tool allowing us to track individual and group performance in real time.

SELECTING FOR RFI*

- RFI is a moderately heritable trait (26-58%), and when used as a selection tool, will result in progeny that consume less feed for the same level of production
- Reduction of overall feed intake by up to 12% while maintaining the same level of production
- Reduction in the maintenance requirements of the herd by 9-10%
- Improvements in the feed conversion rates of calves of from 9-15%
- Reduction of manure NPK production by 17% and greenhouse gas emissions such as methane, by 30%
- RFI is independent of growth, body size and other performance traits, meaning that selection for animals with low RFI will lead to reduced feed intake and improved feed efficiency without compromising body size or growth.

At Lawsons Angus, our plan is to lead the industry in efficiency by stacking generations of selection for RFI, to help our customer produce more beef with less resources.

There are numerous advantages of this new GrowSafe technology, but having the ability to test animals on our own farm is a positive for biosecurity and allows us to manage and feed animals the way we think is best for the longevity and development of bulls.

The future vision of this technology is that it is available to all beef producers (both stud and commercial operations) and feedlots Australia-wide. Lawsons Angus are working closely with GrowSafe to develop mobile GSB units, which will be incorporated in our cell grazing systems in Yea and Western Australia.

MEASURE.
MONITOR.
PREDICT.
OPTIMISE.

IF YOU WOULD LIKE ADDITIONAL INFORMATION REGARDING GROWSAFE PLEASE CONTACT EITHER GROWSAFE OR LAWSONS ANGUS

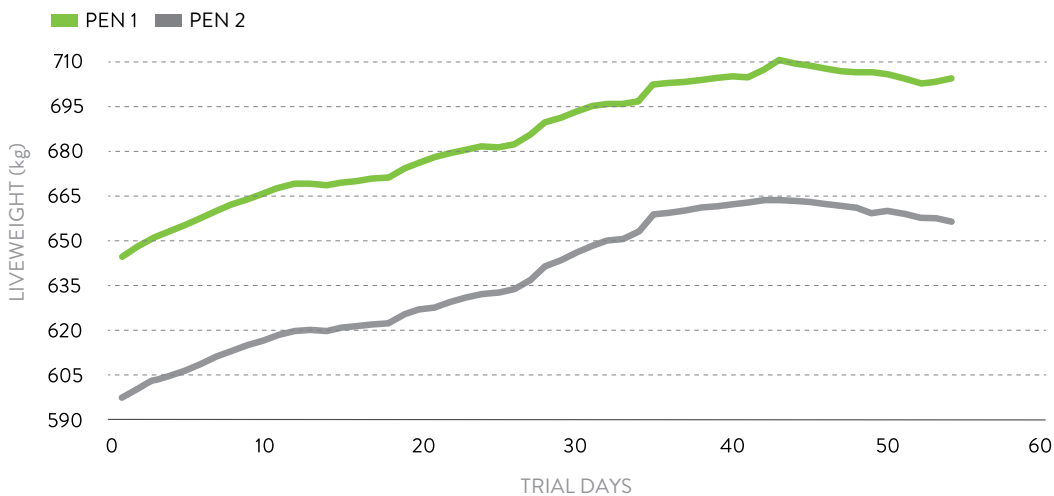

Lawsons Angus steer on the automated GSB weighing platform that reads the NLIS tag and records partial body weight. These partial body weights are calibrated and converted to full body weights, to provide accurate predicted daily live weights and ADG calculated in real time. Animals can be virtually flagged in the software and marked with spray paint in the pens as they reach target weights or if there are any animal health issues for easy in-pen identification.

REFERENCE SIRES

GAR PROPHET

Prophet sets the frontier in modern beef production with phenomenal growth curve, moderate cow size and easy calving. This combined with Prophet's elite carcass genetics and excellent disposition and structure provides the next step for progressive breeders.

GAR PROPHECY

GAR prophecy, is a Prophet son with high growth high end carcass merit, dam an elite B/R Ambush 28 daughter.

PARINGA JUDD J5

Judd was purchased by Lawsons Angus and Shaanxi Kingbull (China) as a yearling. Judd has proven himself in our tough contemporaries to match it with the big boys. Progeny are deep bodied, super attractive, slick coated and have exceptionally sound structure. Judd daughters are more moderate than both Berkley and Regent and are showing they can handle the pressure of our system with high stocking rates and large contemporary groups.

LAWSONS LINKEDIN L483

Unbelievably good looks, structure and powerful growth sire. LinkedIn is massively built, yet still so moderate in stature. L483's is right up there as possibly the most powerful calving ease bull the Angus Industry has seen. Hardly surprising when you consider the pedigree of Judd x Ayrvale Bartel E7. Purchased by Robbie Payne, King Island and now has 169 progeny in 8 herds so his calving ease is now rock solid as he has been progeny tested against the best proven performance bulls in the breed.

AYRVALE BARTEL E7

Still the one to beat! Bartel is possibly one of the breed's greatest ever sires and was purchased by Lawsons Angus and syndicated as an 18 month old bull. Bartel E7 has been one of the most widely used sires in the Angus breed and was the highest MSA Index bull in his cohort in the Angus Sire Benchmark Program (ASBP). No other sires matches his unique growth curve, calving ease and his proven high end carcass merit.

LAWSONS INCREDIBLE H803

Incredible is similar across the board to his great sire Bartel E7 but with a touch more growth and additional maternal power with his dam, Lawsons Dinky-Di E447, producing many outstanding progeny and still thriving in Bevan Ravenhill's Albany WA herd. Incredible has over 1,000 registered progeny in 20 herds so his Lawsons Angus trademark combination of traits for calving ease, high growth, moderate cow size and elite carcass genetics has had a massive impact both in Australia and in China, where he has also done a great job.

GAR SURE FIRE

Sure Fire is a highly proven rock solid calving ease sire, impressive phenotype with loads of muscle. His actual US carcass data hits the top end of grids. Ideal growth curve and docility, Sure Fire provides the perfect outcross option for most herds. Sure Fire daughters are moderate, fertile and productive with excellent udder quality.

ALLOURA GET CRACKING G10

G10 progeny are exceptionally stout, sound moderate frame size. Perfect for production of high quality beef and efficient cows. Get Cracking is one of the elite proven carcass sires and a graduate of the Angus Sire Benchmarking Program (ASBP). Unmatched combination of high IMF (+4.9) and massive EMA (+11.6 EMA), Get Cracking is one of the highest marbling bulls in the Angus breed. G10 had 21 steers in Cohort 4 that went through the ASBP long-fed program at Rangers Valley, his steers were ranked 2nd for MSA Marbling (average MSA marble score of 571) and 4th ranked for EMA at 85.8 sq cm EMA.

GAR MOMENTUM

Momentum is now regarded as one of the breeds elite calving ease, high carcass merit sires, progeny are stout, moderate frames with exceptionally high EMA and marbling. Sires moderate fertile, easy calving daughters that set the bar for cow efficiency and elite carcass genetics.

GAR SUNRISE

Sunrise combines calving ease, solid growth, incredible end-product merit and with high accuracy. A strong spread from BW to 600D of +3.8 to +133 for 600D EBV and still moderate cow size and exceptionally functional, attractive daughters.

LAWSONS PROSPERITY H382

Prosperity progeny are extremely thick, big butted and super sound. Rock solid calving ease and a popular AI at Genetics Australia where he has been used widely in commercial programs with great success.

RENNYLEA KODAK K522

Kodak is now a highly proven elite carcass and calving ease sire, one of the highest IMF bulls in the breed. Pedigree includes Lawsons Henry VIII Y5, the dam of Regent and Edmund.

Retaining semen marketing rights and 50% revenue sharing interest.

N961 was the highest ranked bull the first Cohort of 60 bulls tested for feed efficiency in Victoria. This is an incredible result as he was up against some impressive contemporaries. We will continue testing 60-80 bulls at a time all year round so we can rank all our sires for the important traits of Net Feed Intake, feed Conversion and Average Daily Gain. N961 is also the #1 ranked bull in the Sale for Heavy Grain Index (GRN), top 1% of the breed for GRN and top 5% for marbling (IMF).

Sure Fire sons were amongst the best of the sires in our first Cohort of bulls tested in our new Feed efficiency testing Unit at Yea, Victoria. Sure Fire was also the highest for average daily gain and up against the best balanced performance sires in the breed. Sydgen Trust 6228 is one of the most highly proven and superior feed efficiency sires (Net Feed Intake), so N628 has a double cross of proven feed efficiency sires. He certainly is an easy fleshing, moderate and extremely quiet disposition bull.

Hybrid bulls at "Broadlands", McKinlay, Qld. The Alison family were badly impacted by the recent floods. The resilience and determination of families like Alison's to succeed is a great example to all Australian people.

Top 10% of the Angus breed for Eye Muscle Area (EMA). We don't work off misleading people by quoting raw data, we like to back our bulls with accurate information that people can rely on.

POWERFUL REASONS TO USE LAWSONS ANGUS TO IMPROVE YOUR PROFITABILITY

1.

VALUE AND SERVICE

Lawsons Angus produce large numbers of progeny bred from the best balanced Angus sires sourced globally. All bulls are backed by a 3 Year Guarantee and are independently assessed for structure and fertility. Genetic progress is predictable and cost effective at Lawsons Angus.

2.

CALVING EASE, HIGH GROWTH AND MODERATE FERTILE FEMALES

Lawsons Angus genetics give you calving ease, high growth, high feed conversion, high fertility and moderate cow size. Lawsons Angus manage their breeding herd in large contemporary groups under high stocking rates with a disciplined, practical breeding program based on sound science, not fiction.

3.

VALUE IN THE FEEDLOT AND ON THE RAIL

Lawsons Angus have been focusing on meat quality for over 25 years. Lawsons Angus are bred to use energy (feed) more efficiently with more taste fat (marbling) and less waste fat (subcutaneous fat) resulting in a significantly higher yield and end value product that creates more value in every part of the supply chain.

SALE CONDITIONS

BUYERS REBATE

Rebate of 2% is available to outside agents settling on behalf of buyers within 7 days. Buyers must be introduced via email to either Andrew Holt Landmark Roma andrew.holt@landmark.com.au or lawsons@lawsonsangus.com.au or in writing prior to Sale day. All agent rebates and settling arrangements are to be confirmed on bidding cards on Sale day and agreed to by Landmark Roma.

DELIVERY OF SALE BULLS

Lawsons Angus and Selling Agents will do our best to assist in the efficient and safe delivery of your bulls. Buyers, please ensure bulls are insured at the fall of the hammer as our insurance does not cover injury of bulls in transit. Buyers must organise cartage of bulls at their own expense.

REGISTRATION STATUS AND TRANSFER OF BULLS

Most bulls on offer are Registered Herd Book animals with the Angus Society of Australia (ASA). Registration status of bulls is shown in the catalogue. 'H' indicates the animal is registered in the ASA Herd Book, 'A' indicates bulls are registered with ASA Performance Register (APR). All bulls will be transferred to purchaser at no cost on request. Non-transfer commercial bulls are denoted 'NT' or 'COM' status.

7 IN 1 AND VIBRIO STATUS OF SALE BULLS

Bulls exposed to reproductive diseases such as Leptospirosis and Vibriosis can have their reproductive performance impaired and spread disease between the females they are servicing.

All bulls offered in this Sale have been vaccinated with Ultravac 7 in 1 and Vibrovax. The bulls have also been vaccinated with Ultravac 7 in 1, Vibriosis, Pesti Guard (BVD), tick fever and 3-day sickness.

3 YEAR BULL GUARANTEE

All bulls have undergone rigorous and independent assessments for structural soundness and fertility, including a semen test and physical evaluation of the bulls reproductive tract. On top of this we offer the strongest guarantee of any seedstock herd in Australia.

All breeding cattle sold by Lawsons Angus are fertile and structurally sound to the best of our knowledge. If a bull becomes infertile or breaks down due to reasons other than injury or misadventure, at any time in the next 36 months, we will:

1. provide you with a satisfactory replacement if available, or
2. issue you with a credit equal to purchase price minus salvage value, that may be used to purchase any animal in future Lawsons Angus sales.

The Lawsons Angus 3 year bull guarantee is not a life insurance policy. Normal care needs to be taken as we cannot replace an animal that is injured or dies for any reason. We recommend you insure animals against injury. An insurance service will be available on Sale day.

This guarantee is in addition to normal terms and conditions governing auction sales, and as such the discretion and final decision as to issuing a credit will be with the vendor. Any credit will be limited to bull purchase price less salvage value and not include any costs, damages or loss of income incurred as a result of claims under this guarantee.

OUR 3 YEAR BULL GUARANTEE IS THE GREATEST WARRANTY PROVIDED BY ANY SEEDSTOCK HERD IN AUSTRALIA.

CALVING EASE

We have included a red tick in summary pages and individual catalogue information for bulls that we recommend are suitable to use in most situations over yearling heifers. Most of these bulls are ≥ 0.0 for Calving Ease Direct (DIR) and less than breed average birth weight (<4.4 Birth Weight EBVs). We believe this combination gives you the best risk management guide for selecting bulls to mate yearling heifers and simplifies the information so that you can focus on improving other key economic traits. We urge breeders not to over analyse this information and narrow down selection options as is often the case. There are a few exceptions that we have made to these EBVs criteria, but we believe these bulls to also be safe calving ease candidates. Individual herds may use bulls outside this recommended range depending on their maternal herd and production system, but these are our recommended 'safe' heifer specifications and they are working well for commercial beef herds.

We also recommend you talk to us about helping to develop a pre-calving heifer **management** plan that can be used in conjunction with these EBV specifications to achieve predictable calving ease and rebreeding results for two year old heifers. Remember management of heifers is equally important as the **genetic** potential of the sires and dams to optimise calving and reproductive performance of heifers.

A BRIEF DESCRIPTION OF EBVS AND \$INDEX VALUES

The following is a brief description of EBVs and \$Index values and Accuracies. For a more detailed explanation please refer to Angus Society of Australia web site (www.angusaustralia.com.au).

ACCURACY (%) ~ Provides an indication of the reliability of an EBV. As more performance information becomes available on an animal (or it's progeny, or relatives) then the accuracy of it's EBVs for particular traits will increase.

CALVING EASE DIR (%)

~ Estimates of the genetic differences between animals in the ability of their calves, from 2 year old heifers, to be delivered without assistance.

CALVING EASE DTRS (%)

~ Estimates of the genetic differences between animals in the ability of their 2 year old daughters to calve without assistance.

GESTATION LENGTH (DAYS)

~ Estimates of the genetic differences between animals in the number of days from the date of conception to the calf birth date.

BIRTH WT (KG) ~ Estimates of the genetic differences between animals in calf birth weight.

200-DAY WT (KG) ~ Estimates of the genetic differences between animals in liveweight at 200 days of age.

400-DAY WT (KG) ~ Estimates of the genetic differences between animals in liveweight at 400 days of age.

600-DAY WT (KG) ~ Estimates of the genetic differences between animals in liveweight at 600 days of age.

MATURE COW WEIGHT (KG)

~ Estimates of the genetic differences between animals in cow weight at 5 years of age.

MILK (KG) ~ Estimates of the genetic differences between animals in milk and animals in percentage retail beef yield, in a 300kg carcase.

INTRA-MUSCULAR FAT % (IMF%)

~ Estimates of the genetic differences between animals in percentage intra-muscular fat (marbling) at the 12/13th rib site, in a 300 kg carcase.

ANGUS BREEDING INDEX

~ Estimates the genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals

that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems. The index is particularly suited to commercial producers who sell progeny into different markets, or to seedstock producers supplying bulls to commercial clients who produce for a range of different production systems and market end points.

DOMESTIC INDEX

~ Estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade, with progeny finished using either grass, grass supplemented by grain or grain finishing systems.

HEAVY GRAIN INDEX

~ Estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 200 day feedlot finishing period for the grain fed high quality, highly marbled markets.

HEAVY GRASS INDEX

~ Estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished heavy steers.
