ON PROPERTY SALE

Thursday, 29th August, 2019

“Ellerslie Park”, Culcairn NSW
Commencing at Noon
Bulls penned from 9.00am

Paul & Scollard

LANDMARK

TO ENSURE YOUR COPY PLEASE BRING THIS ONE ON SALE DAY

DIRECTIONS: The Rennylea Angus sale is held at the Culcairn property, “Ellerslie Park” located one kilometre south of Culcairn on the Olympic Highway. Please turn west onto the Cummings road and enter the property through the open double gates. Culcairn is located 29 kilometres west of Holbrook and 49 kilometres north of Albury.

REFRESHMENTS: The sale refreshments are catered for by the Culcairn Early Childhood Centre. Please give generously to the centre, this is their major fundraising opportunity for the year. Minimum charge is \$10 for morning tea and lunch. Rennylea provides the scotch fillet and rolls for the lunches.

INSPECTION: The bulls will be available for inspection at any time by appointment. Please contact Bryan (0429 038993), Ruth (0400 302629) or Anthony (0437 043443) to arrange a suitable time. The bulls will be penned by 9.00am on sale day.

ANIMAL HEALTH & CERTIFICATION: The bulls have received regular 5-in-1 vaccinations over their lifetime. They are vaccinated against vibriosis (2x). The bulls tested negative for persistently infected pestivirus BVDV and vaccinated against pestivirus. Rennylea Angus is JDBAS8 under the industry approved Biosecurity plan. The bulls carry 3 forms of identification, they are tagged at birth with both a management and a NLIS tag, and freeze branded at 12 months of age. Their full health history is given to the buyer at the time of sale, along with comprehensive notes written by the Holbrook Veterinarian Dr. Reon Holmes.

DELIVERY: “Our bulls on Your Property”. Rennylea organizes free delivery, throughout NSW, Qld, Vic and SA following the sale. These arrangements may be in conjunction with other bull sales held in the area. In some cases, delivery may require additional transport from a central point to your property.

GUARANTEE: On page 4 & 5 is a copy of the unique Rennylea guarantee and your guide to caring for young bulls when you take them home, compiled with the advice of Dr. Reon Holmes BVSc. The working life of young bulls will be extended by following these recommendations.

SALE BY VIDEO AUCTION: The sale shed is in close proximity to the bull pens. The auctioneer sells the bulls by auction, with an electronic video and the full set of data for each bull projected onto the screen. The purchaser & price of the previous lot is displayed on two TV screens.

PLEASE NOTE: The bulls in this catalogue have never been handled with horses. We recommend that if you use horses, that you move your new bull with other non-cycling cattle, so that they are not spooked by the new situation. We recommend that the new bulls are moved on their own by motorbike, as that is what they are used to. Gradually introduce the movement of bulls with horses, so they can adapt in their own time

ANGUS SPRING SALE

Thursday 29th August, 2019

“Ellerslie Park”, Culcairn NSW
Sale commences @ noon

SALE TERMS: All lots will be governed by the usual sale conditions, available on sale day. A 3% rebate is offered to outside agents introducing buyers prior to sale day. To qualify for this rebate they must do two things.

- Introduce the client in writing to the vendor (via email rennylea@bigpond.com) prior to the sale.
- Settle within 7 days.

Agents not meeting the above terms will be entitled to a 1% rebate.

PHONE BIDDING: Please contact the Albury office of Paull & Scollard Landmark (02 60251677, or fax 02 60255144) to arrange phone bidding, 24 hours prior to the sale or one of the agents listed above.

Sale Catalogue Disclaimer All reasonable care has been taken to ensure that the information provided in this catalogue is correct at the time of publication. However, neither the vendor or the selling agents make no other representations about the accuracy, reliability or completeness of any information provided in this catalogue and do not assume any responsibility for the use or interpretation of the information in this catalogue. You are encouraged to seek independent verification of any information contained in this catalogue before relying on such information.

Dear Cattle Breeder,

It is with great pleasure that we present our Spring On Property sale catalogue for 2019. We have catalogued 165 bulls in three age groups, There are 50 N bulls born in the spring 2017, including sires we have used, which are noted. In the P bulls, 83 are born in Autumn 2018 and there are 32 yearling spring bulls. By the time you receive this catalogue in the mail, the video clips will be hosted on our website at www.rennylea.com.au. We recommend that you play the clips of the bulls with the catalogue open in front of you. We also recommend sorting the bulls prior to the sale, to shortlist those that meet your breeding objective.

In May we combined with Zoetis and Holbrook Vet Centre to hold the first Genomics field day in Australia at Ellerslie Park. The keynote speaker was Dr. Kent Anderson Head of R and D for Zoetis. It was wonderful to host a great crowd of around 75 producers and industry representatives and particularly pleasing to see so many young farmers in attendance. We talked through our research with CSIRO looking at what four years of genomic testing on our K, L, M and N drops had delivered. Generally, we are seeing greater accuracies at younger ages for most traits as well as greater standard deviations. This means the bell curve is being spread out for animals both at the top and bottom end of individual traits. There has also been re-ranking of animals but we are confident that genomics is delivering truer breeding values for us prior to progeny testing.

The ongoing seasonal conditions in much of eastern Australia only reinforce our commitment to our long-term breeding objective. Our objective is to breed cattle which have fast early growth, a moderate maturity pattern and maintain a positive fat profile, producing a cow herd which is efficient off grass. Our cows are run under well-above district average stocking rates, get no second chances and each year we eyeball every breeding cow to ensure she has the structure, phenotype, temperament and performance to meet these goals. Each cow is condition scored yearly before calving and poor doers are downgraded into the recipient herd. This ensures we are breeding cattle with the phenotype to handle difficult seasons.

There are four Angus indicies for market suitability. The 165 bulls in this catalogue average in the top 5% or better for all markets. They average +3.6 for IMF which is the top 2% of the breed. There are 10 elite bulls over +5.0 for marbling, giving commercial producers the access to genetics which have the potential to greatly improve meat quality in one generation. There are no other sales where you will have access to a large number of high marbling bulls like here at Rennylea. Standouts are 10 sons by high marbling sire J937. RENNYLEA IS THE 'GO TO' HERD FOR ANGUS CARCASS QUALITY.

There are 17 sons of proven sire Rennylea G420 who consistently breeds moderately framed, easy doing and heavily muscled cattle. The first sons of Rennylea L508 and Rennylea L824 are represented, and these groups of bulls were the standouts for consistency and scanning results in the autumn P drop.

The yearling bulls offer a selection of the highest performing bulls from a cohort of 550 of last year's spring drop. Whilst yearling bulls will not suit everyone and need to be joined at higher rates, these young bulls offer the opportunity to fast-track your herds genetic gain.

We have done everything possible to ensure these bulls perform to their description and achieve great results with your cows. Please contact Bryan (0429 038993), Ruth (0400 302629) or Anthony (0437 043443) at any time to discuss your bull requirements.

Thank you for your interest and support,

Bryan, Lucinda, Ruth & Anthony Corrigan

RENNYLEA BREEDING OBJECTIVES

Watch this short video, “Creating an Efficient Cow Herd” @ www.rennylea.com.au which gives a complete explanation of the Rennylea Breeding Philosophy.

The Rennylea herd has had a very long commitment to traits that lower cost of production and increase net profit.

The genetic trends for the Rennylea herd compared to the angus breed genetic trends give our clients and potential clients, confidence in our programme. We do this by maximizing selection pressure in the ‘free traits’, which are fertility, structure, and carcass and balancing the ‘cost’ traits milk, growth and muscle. **View the video “Creating an efficient Cow Herd”**

1. Fertility. Firstly and foremost are calving ease and fertility, described by days to calving, calving ease and birthweight. Heifers calve at 2 years for 6 weeks.

Trait	Long Term Trend Rennylea Herd	1450 calves born 2018, July 2019 Breedplan
Birth Weight	Rennylea well below breed average	.8kg below breed average
Gestation Length	Rennylea consistently shorter GL over 30 years	Av top 25% of breed
Calving Ease Direct	Rennylea better than breed over 30 years	Av is 1.5 top 32% of breed
Calving Ease Daughters	Daughters following Rennylea direct trend	Av is top 32% of breed
Days to Calving	Rennylea 2 days better than breed average	Av top 20% of breed
Mature Cow Weight	Key Performance indicator for herds that control cost of production	Rennylea less than breed av
Scrotal Size	Followed breed average	Greater than breed average
200 D milk	Cost trait, Rennylea above breed average without sacrificing fertility	Average is +19

Moderate fat cover and mature cow weight are essential in a highly fertile herd. Adverse trends in these traits can significantly lower your herd fertility in one generation in tough conditions. **Rennylea has a unique maturity pattern with mature cow weight the same as 400d growth.**

2. Growth Rennylea selects for fast growth to 400 days, and a moderate maturity pattern, reflected in the mature cow weight and 400wt being the same. Top 20% performance to 600 days bonus.

3. Carcass The Rennylea profile is unique, with both EMA and IMF **averaging in the top 5% of the breed across all calves.** Incredible progress has been made in increasing eye muscle area and intramuscular fat, maintaining fertility and functionality and maintaining our focus on cost of production. Carcass quality contributes 15% of net profit.

Trait	Long Term Trend Rennylea Herd	1450 calves born 2018 July 2019 Breedplan
Carcass EMA	Rennylea Angus exceptional for this trait	All calves av top 15% EMA
Rump and rib fat	Linked to fertility, essential in a high profit system, maintain positive fat	Genetic trend consistently positive
Retail Beef yield	Linked to muscling & fat cover, cautious approach to maintain cow fertility	0 average on all calves
IMF%	Important trait for angus, ‘free trait’ for the breeder, profit driver for feedlotter, MSA driver for consumer	ALL calves av. top 3% Rennylea cattle marble

The breeding challenge is: as performance increases, to maintain fertility and optimise the balance between fat, maturity pattern, meat quality and muscle in a sustainable cow herd. This herd profile reflects our long term commitment to increase the net profit for our clients.

Bryan Corrigan
August 2019

Reporting of Recessive Genetic Conditions

In this Rennylea catalogue, bulls that have a probability of carrying the recessive genes AM, NH and DD have been tested and identified (probability > 10%). We have taken the step of adding this information to the animal’s description. We do not consider these conditions to be a significant commercial issue, any clients who wish to discuss further please contact one of the Rennylea team.

The following nomenclature identifies the status of the bulls in the catalogue.

AMF Tested AM free

AMFU Based on pedigree AM free. Animal has not been tested

AM% % probability the animal is an AM carrier

AMC Tested AM-Carrier

For NH and DD simply replace AM

RENNYLEA BULL GUARANTEE

Many seedstock producers guarantee their bulls. **RENNYLEA** offers a unique Bull Guarantee as it also covers the client's risk of a bull not siring a satisfactory number of calves due to the fault of his own fertility. This guarantee needs to be read with the accompanying bull management notes, written by Dr. Reon Holmes. **RENNYLEA** can offer this guarantee as bulls offered have passed a rigorous test for:

- structural soundness,
- reproductive soundness

This test identifies and removes the bulls in every drop that are unfit to be mated. Note that these results are valid for the next mating only and annual testing is strongly recommended.

WHAT DOES RENNYLEA GUARANTEE?

1. The Bull

If for any reason, a tested **RENNYLEA** bull is unable to sire calves as a result of a failure of his **own fertility** during his first mating we will either:

- replace him with an equivalent Bull
- give credit towards future purchases, under a private treaty negotiation
- refund the purchase price of the bull

2. Compensation for lost pregnancies

Furthermore, we also compensate you for the pregnancies that the bull failed to get for you, by means of either:

- a credit towards future purchases, under a private treaty negotiation
- a cash refund equal to the loss of pregnancies incurred by the owner

HOW DOES IT WORK?

Let's assume that you mate a bull to his mating potential of say 50 cows. If the cows are healthy, cycling and free of diseases capable of causing reproductive failure, you should expect at least 43 (85%) of them to conceive over a 9 week joining period. Let's say that only 30 conceive and it can be independently confirmed by a registered veterinarian of a fertility problem in the bull **not caused by injury or acquired disease**. Rennylea will resolve these issues, in two ways by agreement. 1. We pay the owner a commercial difference in value between the 13 empty cows with 13 pregnant ones. Furthermore, we give a credit or refund on the purchase price of the bull, proportional to the missed and/expected pregnancies. In this case the owner will receive 13/43 (30%) of \$3000. 2. Alternatively, we refund the purchase price of the bull who is sold on Rennylea's behalf or delivered to a place mutually agreed upon by both parties.

RENNYLEA does their utmost to produce bulls that are valued by their new owner for their ability to lower their cost per pregnancy and to improve their herd's genetic worth. This guarantee, amongst the best on offer in Australia, takes away the financial risk within the vital first year of purchasing a bull and clearly demonstrates the confidence that we have in our bulls along with the commitment that we have to you, after sale day.

This guarantee does not replace your obligation to follow the recommendations on page 5, and to observe and manage bulls during joining.

YOUR OBLIGATION TO ENSURE YOUR BULLS' MAXIMUM WORKING LIFE & CALVES

1. UPON ARRIVAL

- i. Ensure your new bulls socialises with a group of animals, (anything except other bulls) in the yards, when they arrive.
- ii. Run the new bulls with a small group of empty females, (he has come from a different herd and may not have had exposure to some of the normal pathogens present in your herd). **This must be done, only two new bulls at a time, with the empty females, for a period of 2 to 4 weeks. Ideally give the cows prostaglandin every 2 weeks so they continue to cycle.**

2. PRE JOINING

- i. We recommend a breeding soundness examination(BSE), including structural assessment, testicular palpation and (ideally) a service ability test. This is mandatory for second joining and older bulls each year. It will improve the fertility performance of the herd, by removing non working bulls out with the cows. If bulls are not service tested it is essential you observe the bulls serve in the first week on joining.
- ii. Keep vaccinations up to date, vibriovax, pestivirus and leptospirosis 7 in 1 and an annual drench, 4-6 weeks prior to joining.

3. JOINING - new bulls have the highest risk of breakdown in the herd, this risk can be reduced by:

- a. **PROTECT a new bull by not overjoining, 40 females per bull maximum.**
- b. **It is recommended, if single sire joining with a new bull, to rotate him with a proven bull for at least one cycle. Also, it is good practice to rotate proven bulls for the last cycle with all new bulls.**
- c. **Recommend that all females are joined in groups with 2 bulls.**

“Most new bull fertility issues develop during the joining period, rather than being pre existing problems, this means that bull surveillance during the joining period is essential”

ONCE THE JOINING IS SET UP, MONITORING IS ESSENTIAL TO IDENTIFY ISSUES AS THEY DEVELOP

Your new bulls need to be run in mobs that are easily monitored, check them 2 to 3 times a week for the first three weeks and then weekly thereafter. This includes looking for,

- a. the bull serving, (this has not been successful until the bull thrusts). If bulls are continually mounting without serving it is often a sign the bull has developed a penile infection and needs to be rested and replaced immediately.
- b. lameness,
- c. evidence of penile or prepuce swelling or inflammation
- d. signs of ill health, lethargy, etc.
- e. numbers of females cycling, (for every 21 females, one cycles each day at the commencement of joining). After three weeks of joining, there will be one cow cycling every three days in 21 females.

4. POST JOINING

Annual breeding soundness evaluation is a non negotiable procedure. Good management of bulls is a year round procedure.

Bulls need to be removed from the cows, at the same time, to create their new mobs. This will limit the amount of potential injuries by reducing the number of bull interactions.

Bull paddock management is very important to minimize injury between joinings. The bulls need enough room to reduce fighting, restricted feed and water will increase interaction.

The target between joining is to restrict weight gain in older bulls to prevent breakdowns. Ideally young bulls have access to a higher level of nutrition as they continue to grow.

Early pregnancy testing is essential for good female management and detection of surprises. The earlier the pregnancy testing is undertaken, the more likely the cause of the problem will be identified. This will not only give you early notice of the problem but also help in formulating a plan to help reduce the chance of the problem occurring in the future.

Reon Holmes BVSc

ESTIMATED BREEDING VALUES AND \$INDEX VALUES

IMPORTANT: Note that all bulls have been measured for both their phenotype (weights, scans, days, docility etc) and genotype (i50K test which records their DNA). The investment in DNA testing adds considerably to the accuracy of the Estimated Breeding Values at a young age.

Accuracies: Provides an indication of the reliability of an EBV. As more performance information becomes available on an animal, its siblings, relations or progeny, then the accuracy of the EBV for a particular trait will increase. The accuracy also indicates the potential for change in values over time. Accuracies are influenced by the heritabilities of the traits and the genetic associations existing between them. Genomics throughout the Rennylea pedigrees has added significantly to the accuracy of young bulls.

Lowly heritable traits (less than 20%) include: fertility traits such as days to calving and calving ease, and milk.

Medium heritable traits (20% to 35%) include gestation length, eye muscle area, 200 and 400 day weight, and rib fat.

Highly heritable traits (over 35%) include rump fat, scrotal size, 600D weight, mature cow weight, birthweight, marbling and retail beef yield.

1. Calving Ease

Calving Ease DIR (%): Estimates of the genetic differences between animals in the ability of their calves from 2 year old heifers to calve without assistance. Heritability of calving ease traits is 10% and positive values are desirable.

Calving Ease DTRS (%): Estimate of the genetic differences between animals in the ability of their two year old daughters to calve without assistance. Positive values are desirable.

2. Birth

Gestation Length (days): Estimation of the genetic differences between animals in the number of days from the conception to the birth of a calf. A negative value is desirable. Heritability of GL is 65%, the correlation with calving ease is -.27% & BW -.5.

Birthweight (kg): Estimates of the genetic differences between animals in calf birth weight. Small or moderate birthweight EBVs are considered desirable. The heritability of birthweight is 39%.

3. Growth

200 Day Milk (kg): An estimate of the genetic differences among animals in milk production potential, expressed in calf growth performance. The heritability of the milk trait is 10%.

200 Day Growth (kg): Estimate of the genetic differences among animals in weight at 200 days.

400 Day Growth (kg): Estimate of the genetic differences among animals in weight at 400 days.

600 Day Growth (kg): Estimate of the genetic differences among animals in weight at 600 days. Heritability of the growth trait increases with age, 12%, 23% and 35% at

200, 400 and 600 days. Mature cow weight is the most heritable at 40%.

Optimum growth is balanced with the production environment. Note that the higher the growth figure at 600 days, then the animal will be bigger, a higher bodyweight, and a later maturity pattern.

4. Carcase

The Rennylea herd has been independently scanned for eye muscle area, fat cover since 1990 and for marbling since the mid 1990's.

Carcase Weight (kg): An estimate of the genetic difference among animals in hot standard carcase weight at 650 days of age. The heritability of carcase weight is 42%.

Eye Muscle Area (cm²): These estimate breeding values of the genetic differences among animals in eye muscle area at the 12/13th rib site on a 300kg carcase. The heritability of EMA is 20%.

Rib Fat (mm): An estimate of the genetic differences in fat depth at the 12/13th rib site on a standard 300kg carcase. Significantly negative values are not desirable for either fat ebv. Heritability is 45%.

Rump Fat (mm): An estimate of the genetic differences in fat depth at the 8th rib site on a standard 300kg carcase. Heritability is 32%.

Intramuscular Fat (%): An estimate of the genetic differences in the percentage of intramuscular fat at the 12/13th rib site in a 300kg carcase. Heritability of IMF% is 37%.

5. Fertility

Mature Cow Weight (kg): Estimate of the genetic differences in cow weight at 5 years of age. Rennylea believes this is a key fertility EBV and optimum mature cow weight is as close as possible to the 400 weight. Heritability of MCW is 40%, it is the most heritable growth trait & the least recorded.

As described rib and rump fat are heritable. Slightly positive genetic fat cover is important and combined with mature cow weight are useful predictors of the herd fertility profile under a commercial production system.

Days to Calving (days): This EBV is an indicator of female fertility based on time between the cow's first exposure to a bull and when she subsequently calves. This ebv has the lowest heritability of all the researched traits at 7%, and has low accuracy, and is not a key performance indicator for maintaining or improving herd fertility.

Scrotal Size (cm): These are estimates of the genetic differences among animals in scrotal circumference at 400 days. The trait is highly heritable at 39%. Positive values are favourable.

6. Dollar Index Values: Dollar index values have been developed to combine the important ebvs for different markets, into a single value. They are another piece of information that may be used when selecting bulls to target particular markets, and ranking them for that purpose. We take the most notice of the Angus Breeding and Heavy

FERTILITY TESTING

Veterinarians from the Holbrook Veterinary Centre assess the bulls for breeding soundness, prior to cataloguing. Any purchasers who require a certificate of fertility may request one on sale day.

STRUCTURAL ASSESSMENT

The structural evaluation and scanning for carcass traits has been done by Mr. Jim Green from Beef Excel. Jim has been doing this work at Rennylea for many years. See page 11 for details.

INTEGRITY OF DATA

Every trait published on Rennylea bulls are backed up by the bull's performance data, collected and transferred electronically to Breedplan. At each collection point recommended by Breedplan, data is collected on all cattle in the herd, except when they have been sold. Sue Govan manages the data and recording system. Every bull also has an i50K genomic test to add to their accuracy at a young age. Rennylea has conducted more than 5,000 50K tests throughout the pedigrees and has the accurately described database in the Angus Breed.

ONGOING ANIMAL HEALTH CARE

Bovine pestivirus can cause significant reproductive losses and can affect the performance of a bull, should it become infected during joining. The disease is widespread throughout Australia and may already be affecting the reproductive performance of your herd. The disease is spread by carriers of the virus, known as persistently infected (or "PI") animals. PIs are cattle that have been exposed to the virus as a foetus, and carry the virus for life, spreading it throughout herds. Introducing a PI bull into a breeding herd can have major consequences on the number and health of calves born.

Vibriosis is a sexually transmitted disease that is spread by bulls which show no physical signs of carrying the disease. However, the disease can cause damage to the uterus, affecting the establishment of a pregnancy. Often, the only indication that the disease is present is a low pregnancy rate, or mid term abortions. The disease can also cause permanent infertility in cows. Vibriosis in your herd will cost you calves, and money.

Leptospirosis is a serious disease, both in cattle and in humans. The disease is spread by animals which have been infected and shed the bacteria in their urine. The disease can cause reduced pregnancy rates and abortions, as well as clinical disease in calves and dairy cows. Humans working with cattle are at risk of contracting this debilitating disease, which can cause chronic illness. Vaccination of cattle is the best way to protect yourself, your workers and your families.

These bulls have all been tested to ensure that they are not persistently infected (PI) with pestivirus, and have been vaccinated with 2 doses of Pestigard®, Vibrovax® and Ultravac® 7 in 1. By purchasing a Rennylea bull, you are minimising the risk of this bull introducing, spreading and becoming infected with this diseases during the critical joining period. Remember, to ensure the long term health and productivity of your bulls, it is important that annual booster doses of these vaccines are given to your bulls pre joining.

Beef Class Structural Assessment System

The Beef Class Structural Assessment System was designed to address structural problems in the beef industry.

Rennylea have been using a strict assessment program to assess the structural composition of their herd to best guarantee the soundness of their stock. The program used at Rennylea involves an:

- An annual assessment of all sale bulls

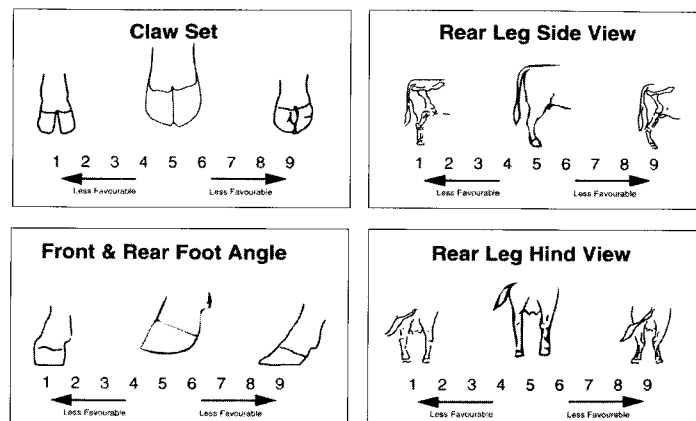

An Explanation of the Beef Class Structural Assessment System

The Beef Class Structural Assessment System uses a 1-9 scoring system for feet and leg structure;

- A score of **5** is ideal;
- A score of **4 or 6** shows slight variation from ideal, but this includes most sound animals. An animal scoring 4 or 6 would be acceptable in any breeding program;
- A score of **3 or 7** shows greater variation but would be acceptable in most commercial programs. However, seedstock producers should be vigilant and understand that this score indicates greater variation from ideal;
- A score of **2 or 8** are low scoring animals and should be looked at cautiously and inspected very closely before purchasing;
- A score of **1 or 9** should not be catalogued and are considered immediate culls.

TEMPERAMENT

The temperament or docility score separates animals from the same contemporary on their calmness in a confined area. Animals which are extremely quiet (touchable) score '1'. Animals that are aggressive or extremely agitated in the crush are scored as '5'.

**FOR MORE INFORMATION PLEASE CONTACT:
JIM GREEN 0402 003 137**

SEMEN INTERESTS - please read this with regard to marketing semen from Rennylea bulls.

The bulls are sold with full physical ownership by the purchaser and the right to the salvage value of the bull. Purchasers have the right to collect and use semen within their own herd.

There are many bulls available on the semen market and few bulls have significant sales of semen. This is particularly true of bulls recorded under the Angus Performance Register system. **Rennylea is maintaining marketing rights and 50% of future proceeds to protect the future marketing of our genetics.** As further data is accumulated on bulls, through progeny and their relations, there are a small number of bulls whose contribution will continue to be useful both in our herd and the industry. In those cases, it is to the owner and Rennylea's advantage to market the bull through our established systems. In these cases, collection costs will be at Rennylea's expense and at a mutually agreed time and place for the owner of the bull.

The bulls in this catalogue were filmed for the sale DVD on the 10th and 11th of July. We have also posted these film clips on the web so you can see each animal walking and standing. Their performance data is also available with the video. To view the film clips of the bulls please go to www.rennylea.com.au and follow the link to the website where the clips are hosted.

RENNYLEA QUALITY ASSURANCE

The bulls in this catalogue have been measured for every trait at every required point. They are meticulously recorded and highly accurate.

Every bull in the catalogue has been:

- ✓ Weighed and tagged at birth
- ✓ Weighed at 200, 400 & 600 days in large management groups
- ✓ All mature cows in the herd are weighed for mature cow weight, & condition scored every year
- ✓ Calving ease and gestation length data submitted
- ✓ Scanned for eye muscle area, intramuscular fat and fat depth at the rib and rump sites (400 days), testicles measured
- ✓ Parent verified through i50k test
- ✓ All bulls with known recessive gene frequency, tested
- ✓ i50K SNP tested at birth for production traits, and incorporated into their EBVs through single step
- ✓ Before sale they have been independently assessed for feet, legs, sheath, testicles and docility
- ✓ Before sale they have been independently assessed for fertility by veterinarians from the Holbrook Veterinary Centre
- ✓ Rennylea is a JBAS8 herd and bulls are eligible for entry to all states
- ✓ Tested negative for persistently infected pestivirus, BVDV, & vaccinated
- ✓ Vaccinated for 7-in-1 and vibriosis and sold with a lifetime animal health record
- ✓ They carry 3 forms of ID, management, NLIS & freeze branded
- ✓ They are **delivered free** to NSW, VIC, SA, Qld to major centres, sometimes in conjunction with other bull sales
- ✓ Our product is guaranteed see the guidelines in the catalogue.
