ANNUAL BULL SALE

Dear Friends and Cattle Breeders,

Welcome to our Annual Bull Sale

Last year we commented on the extreme drought situation in Nundle and many parts of Eastern Australia. Regrettably we cannot report that the situation has changed for most!

All of this of course means extra work for the team at Wombramurra because once again we have no oat crop which we rely on at this time of the year to grow out our bulls. Regardless of that all of the bulls are 'ready to work' and weighing well in all age categories.

We are offering 52 bulls on August 14 ranging from 100% Black Simmental through to Sim/Angus. The ages of the bulls vary from 18 to 24 months.

Bonnydale Augustus L84 continues to impress and we just can't believe how well this bull holds his condition at the end of joining 50 or more cows. Please check him out in our Sale Video on our website and I think you will agree. He is outstanding as are his progeny with calving ease, sound structure and excellent muscle being a feature. Other sire lines represented in this year's sale include Hook's Beacon, GW Bar CK Breakout, and the first progeny of two Millah Murrah sires we purchased in Doc K293, and Reality K213.

Our slogan is 'Profit Driven Genetics' and this is what our cattle represent having delivered excellent results in Trials because we focus on getting the balance right between daily weight gain and eating quality.

All the sale bulls have undergone a comprehensive vaccination program including 7 and 1 (Leptospirosis), Vibrovax (Vibriosis) and Pestiguard (Pestivirus). It is the responsibility of the purchaser to maintain a booster program for continued protection.

As usual you can purchase bulls on Auctions Plus and we will once again be supporting RUOK.

We look forward to seeing you on Sale Day.

Andrew and Trudy Chapman
02 6769 3286 - 0418 808 980

Peter and Judy Howarth

Profit Driven Genetics

This catalogue is also available on our website: www.blacksimmentals.com.au

BUYERS PLEASE NOTE: All care has been taken in the preparation of this catalogue. However the vendors and their agents do not accept any responsibility for errors or omissions. Prospective purchasers should satisfy themselves by inspection or otherwise as to the accuracy of the particulars.

NOTICE TO BUYERS

DIRECTIONS:

Wombramurra Sale Complex is 3km south of Nundle on the Crawney Road. Directions can be found on page 36 of this catalogue.

INSPECTION DETAILS:

Cattle will be available for inspection from 10.00am. Presale inspections are encouraged by appointment with vendor.

ACCOMMODATION:

The agents will be pleased to arrange accommodation and transport requirements for visitors.

LUNCHEON:

A complimentary light lunch will be available.

THE SALE:

- All lots will be sold in accordance with conditions of sale by auction in New South Wales.
- Potential purchasers must register with the selling agent prior to the commencement of the sale.
- All lots are sold exclusive of GST
- A "Buyers Instruction Slip" is provided at the registration desk. Written Transport instructions must be supplied on this slip at the conclusion of the sale.
- All accounts to be settled by Landmark.

TRANSPORT:

Transport of the cattle is the responsibility of the purchaser. Reliable transport operators can be arranged through Landmark.

AGENTS REBATE:

A rebate of 2% is offered to outside agents who introduce buyers to the selling agent in writing before the sale, and settle accounts within 7 days.

INSURANCE:

Purchasers are encouraged to insure their new acquisitions. Landmark can assist with any insurance requirements.

HEALTH:

- Drenched with Cydectin Pour On in July, 2019.
- Vaccinated with 7in1, Pestiguard, and Vibrovax (Booster July 2019).
- It is the responsibility for the purchaser to maintain a booster program for continued protection.

WOMBRAMURRA IS EU ACCREDITED

QUALITY ASSURANCE:

- All bulls have been subjected to independent assessment for Fertility, Structural soundness and temperament.

- All bulls have been certified by Peter Brown of Bovine Breeders who performed a crush side semen test, internal and external reproductive palpation, and a visual inspection of structure and temperament.

FERTILITY GUARANTEE:

Should any bull prove to be a non-breeder within 6 months of the date of the sale, we offer either a credit for the full purchase price, or your money refunded. It is the purchaser's responsibility to provide a certificate from a registered veterinarian before the 6 months verifying infertility, and that it was not the result of an illness, injury, or misadventure.

SEMEN RIGHTS:

Wombramurra reserves the right to collect up to 200 straws from any bull in the sale for within herd use only. Any semen collection will be at our cost and the purchaser's convenience.

RECESSIVE RED GENE:

All bulls have been tested for the red gene by DNA, or through pedigree deduction. The results are found above the EBV table on each lot. Homozygous Black means the bull is free of the red gene. Heterozygous black confirms the presence of a recessive red gene.

VISITOR SAFETY:

Only experienced cattlemen and women should enter the saleyards. **PEOPLE ENTER THE SALEYARDS AT THEIR OWN RISK.** No children or prams are permitted to enter the saleyards. Please use "Common sense" whilst inspecting the bulls, remembering not to get too close and to always give them a wide area to get relief away from any pressure you or others may be applying to them.

NEW BULLS ARRIVING HOME:

To decrease the chances of encountering any problems with your new bull, please ensure you unload him into your yards with a small group of steers or cows. Do not incorporate him into your existing bull group as the chance of injury will dramatically increase. Wherever possible your young bull should be mated as a single sire, or in a group of bulls the same age. It is critical that you regularly monitor the joining of your new sire, paying particular attention to any lameness or excessive swelling in joints, sheath or testicles. Early detection of injury or illness and removal of the bull can greatly increase recovery outcomes, and decrease the chances of poor conception rates.

WOMBRAMURRA BLACK SIMMENTALS STUD HISTORY

Wombramurra Black Simmentals developed as the result of Peter Howarth's involvement with the Simmental breed since 1980 and the operation of large commercial cattle properties located at Nundle and Quirindi NSW.

Langton Gate Poll Simmentals was dispersed in May 2005 at which time it was the largest 'traditional' Simmental herd in Australia.

During his years in the industry Peter also operated a 5,000 strong commercial cow herd and he therefore understands the importance of breeding and selecting the right bulls for the commercial cattleman's needs. Because of the impact calving ease, fertility, growth, carcass quality and crossbreeding have on 'net profit' it's not surprising that Peter turned his attention to Black Simmentals in 2004 when he imported the first such embryos into Australia from Montana, USA.

Black Simmental deliver more marbling, no eye cancers, polledness and a smaller framed Euro resulting in easier calving, earlier maturity and low maintenance cows. The outstanding maternal, growth and higher yield traits for which Simmentals are famous have been retained. Of major importance is that the progeny will grow quickly are generally black and when crossed with British breeds generate increased yield and weight.

Our 'Profit Driven Genetics' will supply the cattle industry with these excellent Black Simmentals which will increase profits for our clients. We have been fortunate in establishing a close association with the Butcher family who operate the Gateway Simmental Stud in Montana, USA. They have been breeding Black Simmentals since 1989. It is a great bonus for Australian cattle breeders that we continue to have access to the best Gateway genetics after so many years of careful selection by them. We also use other carefully selected genetics in our stud.

Since 2004, we have undertaken a large embryo and AI programme and now have a 400 strong female herd of various grades from which to breed the 'new Simmental' bulls for our clients.

In 2005 Peter and Judy entered into a partnership with Andrew and Trudy Chapman who are extremely good judges of livestock and this has been a great success.

In 2015, 2016 and 2017 cattle breeders using a Wombramurra Black Simmental crossed with an Angus entered pens of steers in the prestigious NSW Spectacular Feedback Trial achieving regular success. This included Grand and Reserve Champion's on no less than two occasions. Also in 2016 two pens featuring Wombramurra Black Simmentals achieved Grand and Reserve Champion's in the 70 Day section of the RNA Paddock to Plate competition. The significance of these results is that success depends on a balance between DWG and carcass merit. The Black Simmental/Angus Cross is repeatedly delivering these outstanding results which is so important to the commercial cattleman's profit.

At our 2017 Bull Sale the record price for a Black Simmental was broken twice by both Tony Horwath from Mungallala who paid \$28,000 for a GW Lucky Man 644N son and David and Ben Wirth from Glenn Innes who paid \$29,000 for a TNT Tanker U263 son.

In November 2016 Wombramurra purchased the adjoining property 'Kelso' comprising 1860 acres which has meant that we can expand our breeding program and offer more bulls at competitive prices at our Annual Sale.

Profit Driven Genetics

SIMMENTAL GROUP BREEDPLAN

EBV FOR BIRTH WEIGHT

Birth weight is a major factor in calving difficulty. Use EBVs to select against birth weight if dystocia is a problem. The lower the EBV the lighter the calves are expected to be.

EBVS FOR 200-DAY GROWTH AND MILK

Vealer producers should place emphasis on the 200-day growth and milk genes. If the bull is to be used as a terminal sire, growth is most important. If a bull is to be used to breed replacement heifers, and superior milking and mothering ability is required, then consider the milk genes with the EBV for milk (kg). The estimate in kg milk is not the yield of milk of the dam, but the growth of the calf due to more milk and better mothering of the dam.

EBV FOR 400-DAY WEIGHT

400-day weight EBVs are a measure of the animal's ability to grow to 400-days-of-age (can be measured from 301-500 days). It should be used by producers who wish to turn off yearling cattle.

EBV FOR 600-DAY WEIGHT

600-day EBVs are computed for growth to 600-days-of-age (can be measured at 501-900 days). It is the best prediction of an animal's ability to grow onto maturity, hence it is important for the heavy steer producer.

CARCASE TRAITS

These traits are calculated from both live scan and actual carcass data and are adjusted to a standard steer carcass weight of 300kg.

FAT DEPTH EBV (RIB AND RUMP)

Measured in millimetres at either 12/13 rib or P8 sites. As these EBVs increase, the progeny can be expected to fatten more easily but carcass yield may decline.

RETAIL BEEF YIELD (RBY%)

The percentage of retail cuts compared to total carcass weight. Related to EMA and Fat Depth and Weight EBVs.

INTRA MUSCULAR FAT (IMF%)

The percentage of fat to muscle in the eye muscle. Used as a more precise measure than Marbling Score.

EYE MUSCLE AREA (EMA)

EBVs are relative to the breed average EBV of +2.5 sq.cm. A larger EMA EBV (sq.cm.) means more muscling and generally higher carcass yield relative to carcass weight.

GROUP BREEDPLAN

Simmental Group Breedplan uses all the information on the individual from within the herd plus all performance information from relatives in other Group Breedplan herds. The EBVs in all herds relate to a common base. This increases the accuracy of the data, as well as allowing comparison of the genetic merit of the animals from different herds (across herd) within the group.

SUMMARY

Remember the profit rule in buying bulls on their EBVs. Use the EBVs closest to your production system. Buy the bulls with the best EBVs your budget can stretch to, after you have taken structural soundness into consideration. It is important to relate each bull's EBVs to the current breed average.

SIMMENTAL GROUP BREEDPLAN

The Breedplan values in this catalogue were calculated in the July 2019 Simmental Trans Tasman Group Breedplan evaluation unless otherwise stated. Each reported trait shows an EBV and its Accuracy level.

The **EBV** (Estimated Breeding Value) provides the best current estimate of the bull's true genetic merit for that trait, relative to the overall base for the Simmental breed. It indicates how his progeny should perform relative to those of other bulls in the breed.

The **Accuracy** indicates how well an EBV predicts the true genetic worth of an animal. The Accuracy of an EBV will be higher for traits with a higher heritability and will increase as more performance information on an animal and its relatives becomes available.

The accuracy of an ABV is reported as a percentage. EBVs with high accuracy will change less than EBVs of low accuracy when more performance records are analysed.

High Accuracy Above 85% – Medium Accuracy 75% to 85% – Low Accuracy Below 75%

This abbreviated Percentile Table can be used to see where a bull's EBVs fit within the breed's current genetic levels. For example, a bull with a 400 day EBV of +40 fits within the Top 30% for that trait relative to all 2017 drop calves.

EBV Percentile Table (abbreviated) Simmental Animals born in 2017										
Percentile Band	Birth Weight (kg)	200-day Weight (kg)	400-day Weight (kg)	600-day Weight (kg)	Milk (kg)	Eye Muscle Area (sq. cm)	Rib Fat (mm)	Rump Fat (mm)	Retail Beef Yield (%)	IMF (%)
Top 10%	- 1.9	+ 27	+ 51	+ 66	+ 13	+ 4.3	+ 1.5	+ 1.6	+ 1.6	+ 1.0
Top 30%	- 0.1	+ 22	+ 40	+ 50	+ 10	+ 3.3	+ 0.6	+ 0.5	+ 1.1	+ 0.5
Average	+ 0.7	+ 19	+ 34	+ 42	+ 8	+ 2.6	+ 0.3	+ 0.2	+ 0.5	+ 0.3

Simmental Breedplan evaluations are undertaken by ABRI from data supplied by breeders. Neither ASBA nor ABRI oversee or audit the collection of this data. For more details on Breedplan and how EBVs and Accuracies are determined, visit the Simmental Australia website at www.Simmental.com.au or contact Felicity Reeves - Telephone 6773 2714 - Fax 6772 5376.

SIMMENTAL GROUP BREEDPLAN SELECTION INDEXES

Simmental selection indexes are calculated for four market specifications, namely, Domestic Maternal, Export Maternal, Northern Terminal and Vealer Terminal. These indexes relate to typical Simmental herds in temperate Australia targeting these specifications.

Indexes are reported as an EBV, in units of relative earning capacity (\$s) for a given market. They reflect both the short-term profit generated by a sire through the sale of his progeny, and the longer-term profit generated by his daughters in a sustainable cow herd. Therefore, a proportion of heifers bred in the herd may be retained for breeding.

The indexes are derived using the BreedObject technology. More information on this technology is available from the BreedObject website.

Domestic Maternal Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g. Angus cows) targeting the domestic supermarket trade. Steers are either finished on grass or grain (e.g. 60-70 days). Steers are marketed at 430 kg live weight (240 kg HSCW and 6 mm P8 fat depth) at 14 months of age. Daughters are retained for breeding.

Export Maternal Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g. Angus cows) targeting the export trade. Steers are finished on grain (e.g. 120 days) and marketed at 700 kg live weight (380 kg HSCW and 8 mm P8 fat depth) at 28 months of age. Daughters are retained for breeding.

Northern Terminal Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Northern Australia (e.g. Brahman cows) targeting the export trade. Steers are finished on grass and marketed at 630 kg live weight (345 kg HSCW and 12 mm P8 fat depth) at 28 months of age. This is a terminal production system therefore no daughters are retained for breeding.

Vealer Terminal Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g. Angus cows) targeting the vealer trade. Vealers are weaned and sold at 8 months of age weighing 350 kg (195 kg HSCW and 6 mm P8 fat depth). This is a terminal production system therefore heifers are not retained for breeding purposes.

Note that \$Index Values for individual animals are sensitive to the assumptions used in the BreedObject analysis to calculate the relevant selection index. More information is available on the weightings used in the Domestic Maternal, Export Maternal, Northern Terminal and Vealer Terminal Indexes.

Understanding Breedplan for multi-breed Animals

EBVs for Wombramurra Black Simmental/Angus are comparable to EBVs of Purebred Wombramurra Black Simmentals and the general Australian Simmental population. As a result we have noticed some of the Black Simmental/Angus growth figures are low, and in some instances are a negative value. This does NOT suggest that these animals will not grow, but indicates that they possess genetics for more moderate growth when compared to the purebred Simmentals. Below is an example of the Estimated Genetic difference of a Purebred Simmental with a positive 600 Day growth EBV, and a Simmental/Angus with a negative 600 Day growth EBV.

Purebred Bull with 600 Day Growth EBV of +16

Sim/Angus Bull with 600 Day Growth EBV of -8

On comparison of the 600 Day Growth EBVs above, the genetic breeding difference of the two sires is 24 kg. As the sire only contributes half the genetic profile to its offspring, the genetic breeding difference of the two sires equates to 12 kg. Hence, the 600 Day genetic value of the Sim/Angus bull is 12 kg less than the Purebred bull per offspring. This clearly indicates that the Sim/Angus bull has more moderate growth than the Purebred bull however with only a 12 kg 600 Day genetic growth difference, the Sim/Angus bull has suitable growth for the commercial breeder. We encourage the use of the Selection Indices as a balanced guide to the economic value of the genetics carried by these multi-breed animals.
