

SUPPLEMENTARY GUIDE 2019

SUPPLEMENTARY EVALUATION GUIDE

- **NO FOOT TRIMMING**
- **RAMS HAVE NEVER BEEN SHORN, except the Stud Sires that have been used in Amarula Stud.**
- **WEIGHT** - weighed on Wednesday 30/1/19.
- **HEAD QUALITY** in a Dorper the head is an important indication of the rest of the body. A ram's head must be masculine and a ewe's head must be feminine.
Amarula Rams have been selected for good masculine heads.
- **MEAT QUALITIES** are very important including carcass shape and muscling, along with body length, width and depth of rump.
Amarula Rams are selected for muscling on the shoulders, flowing through to superior muscling in the hindquarter.
- **EXCELLENT STRUCTURE** is paramount in a Dorper Ram (or any breed of ram) as structural correctness and conformation leads to ability to walk, to perform his breeding duties, carcass quality and longevity. Amarula rams are evaluated from the time they are weaned for these traits and any ram that does not meet our expectations is culled.
- **HOOF** is a score for Hoof structure, hoof length and claw set. Amarula rams do not have their feet trimmed. As it is difficult to see the hooves on videos, we have given them a score for you.
 - ✚ **5** Excellent - no problems at all.
 - ✚ **4** Good - minor issues such as slight turn of hoof or slight curling of toe.
 - ✚ **3** Acceptable and **not** caused by structural issues higher up the leg (ie: pastern issues) or shoulders. This includes curling of the toe or longer hoof growth. A dorper with a hoof score of 3 is not acceptable as a stud animal even if its conformation classifies it as a stud.
- **EVALUATION** of individual Dorpers of whether it is a Stud or Commercial Ram, or Ewe is given. It is our opinion our own Amarula Dorpers and not an official Typing and Tagging of the Dorper Breed Society. We are very stringent on our classing parameters.
 - ✚ **STUD SIRE or ELITE EWE** - Superior quality animal.
 - ✚ **STUD** – Very good quality.
 - ✚ **COMMERCIAL** – Good quality but has a few minor issues. For example, a Dorper with an exceptional carcass but a slight topline issue, is classified a commercial.
Note many commercial animals can have superior production or other traits and produce outstanding Prime Lambs.
 - ✚ **POSSIBLE STUD (PS)** – a young animal that has the potential to be STUD QUALITY.
- **BWWT, WWT, PWWT, PFAT, PEMD and MCP** are evaluated by Sheep Genetics. ASBV's (Australian Sheep Breeding Values) are designed to be used to compare the genetic potential of animals independent of the environment and location. These can be perused in the catalogue.
- **IMF, SF5, LMY, DRESS** are hard to measure traits that are important for sheep meat eating quality. Our sires are involved in the resource flock yearly therefore we can offer these traits which are being measured from DNA.
 - ✚ **Intramuscular Fat (IMF)** is basically marbling and has been shown to have a significant impact on the flavour, juiciness, tenderness and overall likeability of lamb.
 - ✚ **Shear Force (SF5)** is correlated to tenderness and is a measure of the force required to cut through the loin muscle of lamb after 5 days of ageing. The more negative the ASBV the more tender the meat.
 - ✚ **Lean Meat Yield (LMY) & Dressing Percentage (DRESS)**. An increase LMY generally has a negative effect on meat tenderness and flavour. The challenge is to increase LMY and not jeopardise the fantastic quality of the meat, so LMY and eating quality need to be managed together.
- **PREGNANCY TESTING (SCAN)** – Ewes have been joined to AMARULA "BFG" 176595 for 6 weeks. I scanned the ewes on 30/1/18. NDP (Not Detected Pregnant) girls are most likely pregnant, but I am unable to see it as they are not advanced enough.

DORPER RAMS
