CASTEC Rural Supplies

Beef up with

What's the beef with EPRICARE Pour-On?

EPRICARE Pour-On contains eprinomectin, the highly potent macrocyclic lactone (ML) selected because of its powerful broad spectrum of activity against gastrointestinal roundworms and high potency against *Cooperia* spp., the dose-limiting parasites for MLs.

Proven control

EPRICARE Pour-On has proven long action against more species of roundworm than any other ML Pour-On. EPRICARE Pour-On also stops worms producing eggs faster than other endectocides, which means less pasture contamination for healthier stock.

Better weight gains

What's the advantage of using a highly potent product to control roundworms in your cattle? Studies have shown that cattle treated with eprinomectin gain up to 20-22kg more weight than untreated cattle over 4-5.5 months. Treated cattle graze for longer and consume more dry matter throughout the day.

Calves treated with EPRICARE Pour-On have been shown to gain significantly more weight than those treated with 'rescue' fenbendazole (white) drenches throughout a four month period on pasture.

Grazing calves treated with EPRICARE-Pour-On have been shown to gain significantly more weight than those treated with doramectin injection.

AuctionsPlus™

THE DIAMOND POLL HEREFORD BULL SALE

BUYER'S INFORMATION

INSPECTION: All cattle will be available for inspection from midday on the morning of the sale, however inspection can be arranged beforehand by appointment.

SALE: To commence with heifers at 1.30pm to be followed by bulls. All lots interfaced with Auctions Plus.

LUNCHEON: Light luncheon and refreshments will be available.

DELIVERY: The vendors offer free delivery within 150kms to designated points.

REBATE: 5% rebate will be paid to outside agents who introduce clients in writing 24 hours prior to sale and accompany them on sale day. 3% will be paid to outside agents who introduce clients in writing prior to the sale but do not accompany them on sale day.

HEALTH: All herds are officially government accredited as TB and Brucellosis free. All studs have 6 J-BAS points or BJD. All bulls have been treated with Dectomax and vaccinated with a seven-in-one prior to the sale. All bulls have been tested persistently infected free of pestivirus. All bulls have been checked and passed a veterinary fertility test.

EXPLANATORY NOTES FOR BREEDPLAN EBV'S

ESTIMATED BREEDING VALUES (EBV's)

EBV's for the growth traits are calculated in kilograms. The EBV is the best estimate of an animal's genetic merit for that trait.

ACCURACIES

Accuracies are presented with every EBV and give an indication of the amount of information that has been used in the calculation of EBV. The higher the accuracy the lower the likelihood of change in the animal's EBV as more information is analysed for that animal and its relatives.

GROWTH EBV

MILK: 200 day milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV is indicative of their daughters milking ability as it affects the 200 day weight of their calves.

200: 200 day growth EBV (kg) is calculated from the weight of the animals taken between 80 and 300 days of age.

BIRTH

BWT: Birth weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

400

400 day weight (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for dam age. This EBV is the best estimate of an animal's genetic merit for yearling weight.

600

600 day weight (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

EMA

Eye Muscle Area EBV (cm²) estimates genetic differences in eye muscle area at the 12/13th rib site of a 300 kg dressed carcass. The more positive EBV's indicate better muscling animals.

RUMP

Rump Fat EBV (mm) estimates the genetic differences in fat depth at the P8 site of a 300 kg dressed carcass. More positive EBV's indicate more subcutaneous fat and earlier maturity.

The Poll Hereford Group Breedplan Estimated Breeding Values contained in this Sale catalogue were compiled by ABRI from data supplied by the breeders. Neither the Australian Poll Hereford Society Limited nor the ABRI oversees or audit the collection of this data.

MISSING LEPTOSPIROSIS VACCINATIONS COULD LAY YOU OFF WORK FOR MONTHS

In addition to reducing the reproductive performance of beef and dairy herds, leptospirosis can spread from cattle to humans and develop into an ongoing chronic-fatigue-like illness

Don't risk your family,
your employees, yourself
or your herd. Vaccinate
your cattle with
Ultravac® 7in1*,

the only 7in1 that prevents shedding of leptospires,
and can be used in calves from 4 weeks of age.

Protection against leptospirosis and clostridial diseases

FOR MORE INFORMATION, SPEAK TO YOUR LOCAL
ZOETIS REPRESENTATIVE OR CALL 1800 963 847

*See product leaflet for details of administration and product claims.
