# WELCOME TO OUR 2019 HOPETOUN SALE

THIS YEAR'S HOPETOUN SALE IS ONCE AGAIN HELD ON-FARM AT 'WOOLAHRA', 3159 SPRINGDALE ROAD, JERDACUTTUP, AT 1PM THURSDAY 22 JANUARY 2019. ELDERS ESPERANCE ARE THE SELLING AGENTS. THE SALE IS INTERFACED WITH AUCTIONS PLUS. PLEASE FEEL FREE TO VIEW THE BULLS BEFORE HAND BY APPOINTMENT AND BID ONLINE.

**'Woolahra' is about an hour and a half west of Esperance and half an hour east of Hopetoun on the Southern Ocean. We encourage people that haven't been to our Hopetoun Sale before to make the journey this year.**

When we first moved to Hopetoun in 2009 after the Black Saturday bushfires one of the well known local agents made the comment "No one will ever travel out there to buy bulls", thankfully there are many progressive breeders that have supported us and made the journey. We would also like to thank Elders Esperance and their network for their on-going support. We had a fantastic Sale in 2018 selling 93/93 with an average of \$7,580 and Lot 1 Lawson's Momentous M518 selling for a WA record of price of \$31,000, selling to a syndicate of astute WA commercial breeders.

Hopetoun Sale bulls, December 2018

Lawson's Momentous M518 sold for a WA record price of \$31,000 to WA breeders, Blue River Grazing, Ryan Family and Paddy Collins, Pemberton, WA. Momentous has been the top selling sire for Genetics Australia in 2018 and used widely by Lawson's Angus. Momentous's first calves were

born at Lawson's Angus in Spring 2018 and are exciting to watch. Momentous's dam is also one of our elite 25 donors selected out of over 800 proven breeding cows at Woolahra.

**"WE LEARN SO MUCH ABOUT OUR CATTLE IN THESE YEARS AND IT REMINDS US WHAT ARE THE MOST IMPORTANT TRAITS IN BEEF CATTLE PRODUCTION – FEED COSTS AND FERTILITY – BOTH HIGHLY CORRELATED WITH COW SIZE."**

The first group of bulls on test in our new GrowSafe Feed Intake system at Claremont, Victoria. This exciting new research facility will enable us to rank sires and individual bulls for Residual Feed Intake (RFI), Feed Conversion and average daily gain. Feed and maintenance costs equate for over 70% of the operating costs in a beef system. We like breeding cattle that are accountable for not only what they produce but their input costs over their lifetime. This world leading research initiative is a major step forward for Lawson's Angus and our clients.

## HIGHLIGHTS OF 2019 HOPETOUN SALE BULLS:

- Bulls average in the Top 10 % of the breed for Domestic, Heavy Grain and Angus Breeding Indexes
- Top 20% of breed for 400D Growth, below average Mature Cow Weight (MCW) and 80% of bulls are rock-solid calving ease bulls suitable for heifers!
- Large numbers sire-groups of genetically superior, well balanced sons of world leading sires - GAR momentum (6 sons), GAR Method (7 sons), GAR Prophet (29 sons), GAR Prophecy (9 sons), Paringa Judd J5 (31 sons), GAR Sure Fire (8 sons), GAR Sunrise (2 sons), and Ayrvale Bartel E7 (8 sons), Lawsons Incredible H803 (2 sons) plus sons of VAR index and Rennyalea Kodak K522.
- You can see when you look at the genetic comparisons on pages 6-7 these Sale bulls are below breed average cow size (+87 MCW vs +89 breed average) yet still lots of horsepower and grass conversion potential (+90 for 400D or top 20% of the breed for growth). They are also massive muscle (top 15% EMA) and are exceptionally high for marbling with average IMF in the top 7% of the breed for Marbling (Intramuscular fat) top 15% for Carcase Weight (CW). It just goes to show you don't need big cows to have high performance.

We are extremely proud of our line-up of bulls this year for a number of reasons, firstly from a genetic perspective these bulls are truly unique in their combination of calving ease, high growth, moderate maturity patterns with the ability to hit the top end of any markets, particularly anything that involves MSA and eating quality these boys are in a league of their own. Secondly, we feel these are the best presented and developed bulls with the quietest disposition that we have ever presented in Western Australia. To achieve this in one of the toughest rainfall years on record is a great credit to our team and everyone that has been involved in rearing and managing these boys since they hit the deck in the second half of 2017 over a 45-day calving period.

It was one of the toughest years on record at Jerdacuttup in 2018 and we didn't get all our cows out on pasture rotations until September. As we say these tough years not only test us out they also test the resilience and fertility of our nucleus cow herd. It has been also extremely rewarding to hear the well above average preg testing results of Lawsons Angus clients compared to district averages.

## THE BOUNCE-BACK AND HIGH FERTILITY OF LAWSONS ANGUS GENETICS AND THE EASY CALVING ATTRIBUTES OF OUR BULLS ARE THE BACKBONE OF ANY BREEDING OPERATION.

N heifers at Woolahra enjoying the great finish to the year, we achieved an 85% preg rate to AI in our yearling heifers in Spring 2018.

The late rains were a massive relief for our cows and everyone that worked so tirelessly during the drought. To achieve an 85% preg test result with 1001% AI (no follow-up bulls) and 45 day joining period, including over 300 two-year-old "M" drop first calving cows, was a fantastic reward for our team and a great testament to the fertility of our herd.

We are not quite sure why cow size is still such a hotly debated and emotional topic among seedstock herds trying to justify large cows and most still not even submitting cow weights to Breedplan to improve the accuracy of Mature Cow weight (MCW). Where is the commercial accountability of the seedstock Industry? Big cows are not only costly but high risk in terms of reproductive failure, which self-evident in years like 2018.

## MODERATE, EFFICIENT COWS ARE LOWER COST, MORE FERTILE AND LOWER RISK IN GOOD AND BAD YEARS.

As we discussed in our Southern Drought Workshops in June 2018, we all like to see big weaners but focusing on kilograms per hectare and managing our grass and cow herd efficiently to optimise our productivity and financial performance is far more important and relevant than comparing how your weaning weights compare to last year or your neighbours. Many thanks to all those people that attended the Workshops, we enjoyed the interaction and it's great to see people coming out the other side with such positivity and willingness to try new management strategies that apply equally in good years.

You only have to spend a short time in the paddock observing these boys graze to know they know how to compete on a daily basis. Due to the severity of the drought these bulls spent some time at Paul O'Meehan & Associates feedlot at Borden under the control of Brett Page who did a fantastic job of growing these bulls on a high roughage ration. Following that these bulls have spent the last 3 months grazing and walking at Manypeaks and are ideally developed and ready for work!

Hope to see you at Hopetoun on 22 January 2019.

N495 is one of the highest Heavy Grain Index (GRN) bulls in the sale, top 5% of the breed for Domestic Index (DOM), IMF and 400D Growth. N495's ability to outperform his mates is backed up by the fact he was the heaviest bull in his contemporary of over 60 bulls and weighed 684 kg in early October when we scanned these bulls, compared to group average of 597kg, he was also the equal 4th highest EMA scan in his large contemporary group with an actual EMA of 107 sq. cm. We like the Prophet x E7 combination and as you will see there are many bulls in this year's Sale with the same combination – no other combination gives the same calving ease, high growth, moderate cow size and elite carcass genetics like these two performance giants.

Very quiet disposition, another high performance Prophet son with well below average MCW. Talking cow efficiency, N652's dam, Lawsons Bartel E7 H222, is a picture perfect ideal Angus cow and was selected out of over 800 cows in our nucleus WA herd into our elite 25 donors based on her production record, balanced EBVs, visual assessment for conformation, udder and structural soundness. Equal #2 ranked Domestic Index (DOM) in the Sale plus the equal #5 ranked Heavy Grain Index (GRN), top 1% for DOM and top 5% of the breed for GRN and marbling (IMF), top 10% for 400D Growth.

Our new Growsafe Feed Intake system measures daily feed intake as well as daily weight gain. Tough years like many of us had 2018 remind us how important feed efficiency and mature cow size is for feed costs and reproductive efficiency. Our selection pressure remains on producing highly productive cattle that can calve easily and rebreed quickly even in tough years.

Unique opportunity here, the only Kodak son in this year's Sale, beautiful bull, super quiet and perfect structure. N943 is one of the highest Heavy Grain Index (GRN) and Domestic Index (DOM) bulls in the Sale, top 5% of the breed for both GRN and DOM Indexes, top 10% for marbling (IMF). One of the high scanning EMA bulls in his group that had an EMA >100 sq. cm.

A GAR Method out of a two year old Bartel E7 daughter, they don't get any better than this! Equal #2 ranked Domestic Index (DOM) in the Sale plus the equal #5 ranked Heavy Grain Index (GRN), top 1% for DOM and top 5% of the breed for GRN, 400D and 600D Growth. Equal #3 ranked Sale bull for EMA with a massive +10.7 EMA, top 1% of the breed. One of the high scanning EMA bulls in his group that had an EMA >100 sq. cm.

Phenomenal numbers and phenotype and a good outcross for most breeders. Please note the below average MCW. N262 was one of the heaviest and the 4th highest bull for IMF in his large contemporary group with an actual reading of 7.8%, which is right at the top end, so look for this fella to up your MSA Index! Top 5% of the breed for Domestic Index (DOM) and IMF, top 10% for Heavy Grain Index (GRN) and 400D Growth.

A very relaxed Prophet x E7 that is confident he will handle whatever job he is asked to do, again note the incredible growth curve, calving ease and below breed average MCW. One of the high scanning EMA bulls in his group that had an EMA >100 sq. cm. Top 10% of the breed for Heavy Grain Index (GRN), Domestic Index (DOM) and 400D Growth, top 5% for marbling (IMF).

Neat all rounder with an elite growth curve, massive growth and below average MCW and exceptional calving ease! N279 is the equal #3 ranked bull in the Sale for marbling at +3.8 IMF, also top 10% of the breed for Heavy Grain Index (GRN) and 400D Growth.

These Dennis Barnsby PTIC heifers made \$2,000 at the recent IRA Annual Sale in Pemberton. Most are PTIC by AI to Lawsons Momentous M518. Great job Dennis, I'm sure they will go on and so a great job for their new owner.

Easy fleshing Prophet x E7 son with everything you would expect from this combination - calving ease, high growth, fertile, moderate daughters and exceptional carcass traits. N281 was the second highest bull for IMF in his large contemporary group with an actual reading of 8.0%, which is right at the top end, so look for this fella to up your MSA Index! Top 10% of the breed for Heavy Grain Index (GRN), top 5% for marbling (IMF).

N607 is a super attractive, no holes, phenotypically perfect Judd x E7 son. Double curve bender - easy calving, high growth and below breed average MCW - you can't find bulls like this anywhere else in WA as most breeders still think you need big cows to convert grass. These bulls defy every genetic antagonism you can throw at them! N607 ranks in the top 10% of the breed for Heavy Grain Index (GRN), Domestic Index (DOM) and EMA, top 5% for marbling (IMF). One of the high scanning EMA bulls in his group that had an EMA >100 sq. cm.

Cracking bull from any angle, another world class Prophet x E7, a rock-solid calving ease package with lots of horsepower at +116 600D and only +84 on MCW. Wow, that's impressive. N633 is of the best performers, weighing in at 664kg versus his group average of 597kg in October 2018, N633 was also one of the high scanning IMF and EMA bulls in his contemporary group with scan data of 7.3% for IMF and 102 sq. cm EMA. Top 5% of the breed for Domestic Index (DOM) and marbling (IMF), top 10% for Heavy Grain Index (GRN) and 400D Growth.

Hard not to get excited about this larger framed Momentum x E7 son, an absolute beast of a bull. N1064 was a high weight gain bull with loads of muscle and growth, let still well below average Mature Cow Weight. N1064 recorded one of the high scanning EMA bulls in his group that had an EMA >100 sq. cm. Top 10% of the breed for Heavy Grain Index (GRN) and Domestic Index (DOM), top 5% for marbling (IMF) and Eye Muscle Area (EMA).

Typical smooth Judd x E7 son, it may sound repetitive but you seriously cant find bulls with these balanced numbers and phenotype anywhere else in Australia. N300 was one of the high scanning EMA bulls in his group that had an EMA >100 sq. cm. Top 10% of the breed for Heavy Grain Index (GRN), IMF and EMA.

People talk about Angus "type", but most times they confuse "type" with feed and low stocking rates; seriously you won't find better looking bulls than these bulls and they are athletic, ready to work and hit every target for progressive Angus breeders! Judd has had a fantastic influence in our herd since we purchased him with Kingbull, China as a yearling for \$37,000 and he has gone on to great things, his progeny are more moderate and better balanced than both regent and Berkley. N227 was the equal 3rd highest EMA scan in his large contemporary group with an actual EMA of 109 sq. cm. Top 10% of the breed for Domestic Index (DOM), 400D and 600D Growth and EMA.

Apart from his own performance there is some serious maternal grunt behind N620. We can't recommend these Judd x E7 sons high enough, and they can be used over daughters of E7 sons without any concern over inbreeding so for those breeders that have used E7 before you should seriously consider these Judd x E7 sons. N620's dam, Lawsons Bartel E7 H724, was selected out of over 800 cows in our nucleus WA herd into our elite 25 donors based on her production record, balanced EBVs, visual assessment for conformation, udder and structural soundness. One of the high scanning IMF and EMA bulls in his contemporary group recording 7.5% for IMF and 100 sq. cm for EMA. Top 10% of the breed for Eye Muscle Area (EMA) and marbling (IMF).

These Prophet x E7 sons really are totally unique in the global Angus population, look at the CED +3.9 and well above average 400D and 600D (+88 and +107 respectively) and only +60 on Mature Cow Weight (MCW) and combined with his other percentile rankings of 10% of the breed for Domestic Index (DOM) and top 5% for marbling (IMF). One of the high scanning EMA bulls in his group that had an EMA >100 sq. cm.

Powerful Prophet x Topboss Ambassador F4 with well below average MCW. For those that recall the F4 sons at Hopetoun years ago, they sure were impressive and he was also the highest MSA Index bull in his cohort of the Angus Sire Benchmarking Program (ASBP), which involved collection of actual carcass data from steers fed at Rangers Valley in NSW. Not surprising, N593 ranks Top 5% of the breed for marbling (IMF)!

N654 was the 3rd heaviest bull at 668kg in October when we scanned these bulls, magnificent calving ease bull with two incredible sires in Judd and Progress combining well. Moderate framed and one of the few bulls in the breed that are >10 EMA, top 5% of the breed for EMA and IMF. One of the high scanning EMA bulls in his group that had an EMA >100 sq. cm.

Superb looking and performance E7 son out of a General daughter. N600 hit the scales hard at 650 kg over 50kg above his groups average, which would equate to over \$150 above his average on a weight basis. Note N600's exceptional calving ease and well below average MCW. Top 10% of the breed for Domestic Index (DOM) and Eye Muscle Area (EMA).

You can see why we have used Judd heavily over E7 daughters, they just hit every target with ease and do it in such stylish form. N389 was the heaviest bull in his contemporary at 670 kg compared with 605 kg average for his group in October 2018 when we scanned these bulls. N389 was the equal 5th highest EMA scan in his large contemporary group with an actual EMA of 108 sq. cm. Top 10% of the breed for marbling (IMF).

A corker of a bull and only 2kg behind the heaviest bull in his group despite the fact he is 10 days younger (hence why we need EBVs to make accurate breeding decisions!), interesting pedigree with Judd x Novak, two of the best looking boys in the Angus breed. N372 ranks in the top 10% of the breed for 400D and 600D Growth and marbling (IMF).

N231 was the high scanning bull for IMF in his large contemporary group with an actual reading of 8.1%, which is right at the top end, so look for this fella to up your MSA Index! Top 10% of the breed for Domestic Index (DOM), top 5% for marbling (IMF).

Our Hopetoun team of Dusty Clinch, Mark Fairbrass and Darcey Sheil did a fantastic team keeping the feed up to our cows this year.

N254 features two of the breeds first genuine calving ease bulls that had loads of muscle - Pono V346 and Yield Grade. These days we have lots of options, but so often it's these outliers that takes s to new frontiers. N254 ranks in the top 10% of the breed for Domestic Index (DOM) and 400D Growth.

Powerful Prophet x Topboss Ambassador F4 with well below average MCW. For those that recall the F4 sons at Hopetoun years ago, they sure were impressive and he was also the highest MSA Index bull in his cohort of the Angus Sire Benchmarking Program (ASBP), which involved collection of actual carcase data from steers fed at Rangers Valley in NSW. Not surprising, N644 ranks Top 5% of the breed for marbling (IMF)

The only Sale in WA where double curve benders are the norm, not rare as hens teeth! This is through long term planning, not chance. If anyone tells you that you need big cows to breed big weaners or more importantly high kilograms of beef per hectare then it's probably easier to change the topic than change this Industry myth! N627 ranks in the top 10% of the breed for marbling (IMF).

Handy Prophet x Evident son, slightly more negative CED than we would normally like for to get the calving ease tick but based on his low Birth Weight (BW) and pedigree we are confident you can use N915 on heifers. Top 10% of the breed for marbling (IMF).

Lawsons Momentous M518 sold for a WA record price of \$31,000 to WA breeders, Blue River Grazing, Ryan Family and Paddy Collins, Pemberton, WA. Momentous has been the top selling sire for Genetics Australia in 2018.

One of the younger bulls in the Sale and one of the higher growth GAR Method sons, top 5% of the breed for 400D and 600D Growth and Eye Muscle Area (EMA).

Lawsons Anticipation L99 at Collins Bros, Pemberton, WA

# SALE CONDITIONS, REFERENCE SIRES + SIREMATE.

---

FOR HOPETOON & JOANNA PLAINS SALES.

# SALE CONDITIONS

## BUYER REBATES FOR OUTSIDE AGENTS

All lots will be sold subject to the usual conditions governing auction sales.

Rebate of 3% is available to outside agents who attend the sale or introduce their client prior to Sale day, and settle on behalf of clients within 7 days. Please email introductions to lawsons@lawsonsangus.com.au and/or the selling agent. If agents are nominated to settle on behalf of clients on Sale day and do not attend 1% rebate will be applied.

## DELIVERY OF SALE BULLS

Lawsons Angus will do our best to assist in the efficient and safe delivery of your bulls. Buyers, please ensure bulls are insured at the fall of the hammer as our insurance does not cover injury of bulls in transit. Please make sure you provide full delivery instructions in writing, including full contact details and maps prior to leaving the Sale. Lawsons Angus will offer up to \$100 freight assistance on bulls sold at WA Auctions.

## REGISTRATION STATUS AND TRANSFER OF BULLS

Most bulls on offer are Registered Herd Book animals with the Angus Society of Australia (ASA). Registration status of bulls is shown in the catalogue. 'H' indicates the animal is registered in the ASA Herd Book, 'A' indicates bulls are registered with ASA Performance Register (APR). All bulls will be transferred to purchaser at no cost on request.

## 3 YEAR BULL GUARANTEE

All bulls have undergone rigorous and independent assessments for structural soundness and fertility, including a semen test and physical evaluation of the bulls reproductive tract. On top of this we offer the strongest guarantee of any seedstock herd in Australia.

All breeding cattle sold by Lawsons Angus are fertile and structurally sound to the best of our knowledge.

If a bull becomes infertile or breaks down due to reasons other than injury or misadventure, at any time in the next 36 months, we will:

1. provide you with a satisfactory replacement if available
- OR
2. issue you with a credit equal to purchase price minus salvage value, that may be used to purchase any animal in future Lawsons Angus sales.

The Lawsons Angus 3 year bull guarantee is not an insurance policy. Normal care needs to be taken as we cannot replace an animal that is injured or dies for any reason. We recommend you insure animals against injury.

An insurance service will be available on Sale day. This guarantee is in addition to normal terms and conditions governing auction sales, and as such the discretion and final decision as to issuing a credit will be with the vendor. Any credit will be limited to bull purchase price less salvage value and not include any costs, damages or loss of income incurred as a result of claims under this guarantee.

## ANIMAL HEALTH STATUS OF SALE BULLS

2019 WA Sale bulls have been semen tested by Swans Veterinary Services including a crush side and morphology test.

Bulls exposed to reproductive diseases such as Leptospirosis and Vibriosis can have their reproductive performance impaired and spread disease between the females they are servicing. All bulls offered in this Sale have been vaccinated with Ultravac 7 in 1, Vibrovax and Rhinoguard (IBR).

All bulls offered at this Sale have a J BAS 8 and all cattle are free to travel to all states.

## PESTIVIRUS, 7 IN 1 AND VIBRIO STATUS OF SALE BULLS

Lawsons Angus have been systematically working through a program with Enoch Bergman DVM, Swans Veterinary Services, Esperance, to eradicate Pestivirus from our herd in both WA and Victoria. This involved a combination of screening mobs for antibodies, ear notching testing and vaccinating the mobs that are shown to be negative that have had no previous exposure to a Persistently Infected (PI) animal with Bovine Viral Diarrhea (BVDV), also known as Bovine Pestivirus. BVDV is spread almost exclusively by PI animals and is a costly disease in the industry.

All WA males screened in 2017 were negative and therefore we have vaccinated all bulls and heifers.

## RETENTION OF SEMEN AND CLONING INTERESTS

This year we have selected several bulls as being of particular interest and merit. These bulls are referred to herein as "nominated bulls" and are identified in the catalogue by a shaded box containing the words "Retaining Semen Marketing Rights and 50% Revenue Sharing Interest". Animals in this sale that are nominated to retain a semen interest in are sold with the following conditions;

- Each animal sold is the physical property of the purchaser. The purchaser is entitled to collect semen for use in their own herd only at any time. The purchaser is entitled to 100% of the salvage value of the bull.
- Lawsons Angus retains the right to access the nominated bulls at a future date for the purpose of semen production with the semen to be used within the Lawsons Angus program. Semen will be collected at the expense of

Lawsons Angus and at a negotiated time and place convenient to the new owner and Lawsons Angus.

- Nominated bulls are sold with Lawsons Angus retaining exclusive semen marketing control, and a percentage of all semen royalties is nominated on the individual lot.
- Lawsons Angus may offer any purchaser, being a syndicate, semen company or other, the controlling interest in semen marketing of nominated bulls provided the prospective purchaser nominates their intentions to Lawsons Angus prior to sale, and at that time negotiate ongoing marketing/royalty terms acceptable to Lawsons Angus.
- If a bull is re-sold by a purchaser, Lawsons Angus retained interests persist with the new owner.
- Lawsons Angus retains exclusive cloning rights on all animals sold.
- No animal may be cloned without written consent from Lawsons Angus.

**RETAINING SEMEN INTERESTS IN SALE BULLS ENABLES LAWSONS ANGUS TO OFFER ACCESS TO OUR BEST BULLS AND ENABLES THE BULL OWNER TO JOINTLY SHARE IN ANY FUTURE SUCCESS IN MARKETING SEMEN.**

### RETAINING SEMEN

Retaining a semen interest provides Lawsons Angus with the option to collect semen for our own use, but also to control the potential marketing of semen to the best effect through our network of contacts. Very few bulls ever sell a lot of semen, and in most cases it is later in life after progeny have proven the merit of the bull.

As we put a great deal of resources and intellect into developing each bull, and in some cases into sampling young bulls through AAA and cooperator programs, it is reasonable to participate in their future success in the form of semen sales and use in our own program so we can ensure we continue our program's genetic progress. With these points understood by our customers, we can offer for sale every bull we produce, and hold nothing back. It is important to note most seedstock herds retain their best bulls as stud sires, however the system we operate gives our clients direct access to our best bulls.

### INSURANCE DISCLAIMER

Insurance risk of stud animals sold at auction transfers to the purchaser at the fall of the hammer, including animals remaining on the vendor's property.

Purchasers therefore are advised to insure their animals at the completion of the sale. Stud Animals are not covered by commercial livestock insurance.

### CALVING EASE

We have included a red tick for bulls that are recommended for use over yearling heifers next to the Calving Ease heading in EBV section. Calving ease bull specifications are primarily set at  $\geq -1.0$  for Direct Calving Ease and  $\leq 4.5$  Birth Weight. Individual herds may successfully use bulls outside of this recommended range depending on their herd and production system but these are our recommended "safe" heifer specifications. We also recommend you talk to us about helping develop a pre-calving heifer management plan that can be used in conjunction with these EBV specifications to achieve optimal calving and rebreeding for two year old heifers.

# REFERENCE SIRES

**AYRVALE BARTEL E7**

Still the one to beat! Bartel is possibly one of the breed's greatest ever sires and was purchased by Lawsons Angus and syndicated as an 18 month old bull. Bartel E7 has been one of the most widely used sires in the Angus breed and was the highest MSA Index bull in his cohort in the Angus Sire Benchmark Program (ASBP). No other sires matches his unique growth curve, calving ease and his proven high end carcass merit.

**LAWSONS INCREDIBLE H803**

Incredible is similar across the board to his great sire Bartel E7 but with a touch more growth and additional maternal power with his dam, Lawsons Dinky-Di E447, producing many outstanding progeny and still thriving in Bevan Ravenhill's Albany WA herd. Incredible has over 1,000 registered progeny in 20 herds so his Lawsons Angus trademark combination of traits for calving ease, high growth, moderate cow size and elite carcass genetics has had a massive impact both in Australia and in China, where he has also done a great job.

**VAR INDEX**

Powerful son of GAR Ingenuity, great curve bending attributes with moderate Mature Cow Weight (MCW) and massive EMA. Progeny are long bodied with loads of muscle.

**PARINGA JUDD J5**

Judd was purchased by Lawsons Angus and Shaanxi Kingbull (China) as a yearling. Judd has proven himself in our tough contemporaries to match it with the big boys. Progeny are deep bodied, super attractive and have exceptionally sound structure. Judd daughters are more moderate than both Berkley and Regent and are showing they can handle the pressure of our system with high stocking rates and large contemporary groups.

**RENNYLEA KODAK K522**

Kodak is now a highly proven elite carcass and calving ease sire, one of the highest IMF bulls in the breed. Pedigree includes Lawsons Henry VIII Y5, the dam of Regent and Edmund.

**GAR METHOD**

New sire from Gardiner Angus Ranch, massive growth and EMA son of GAR Momentum.

**GAR MOMENTUM**

Momentum is now regarded as one of the breeds elite calving ease, high carcass merit sires, progeny are stout, moderate frames with exceptionally high EMA and marbling. Sires moderate, fertile, easy calving daughters.

**GAR PROPHECY**

GAR prophecy, is a Prophet son with high growth high end carcass merit, dam an elite B/R Ambush 28 daughter.

**GAR PROPHET**

Prophet sets the frontier in modern beef production with phenomenal growth curve, moderate cow size and easy calving. This combined with Prophet's elite carcass genetics and excellent disposition and structure provides the next step for progressive breeders.

**GAR SURE FIRE**

Sure Fire is a highly proven rock solid calving ease sire, impressive phenotype with loads of muscle. His actual US carcass data hits the top end of grids. Ideal growth curve and docility, Sure Fire provides the perfect outcross option for most herds. Sure Fire daughters are moderate, fertile and productive with excellent udder quality.

**GAR SUNRISE**

Sunrise combines calving ease, solid growth, incredible end-product merit and with high accuracy. A strong spread from BW to 600D of +3.6 to +135 for 600D EBV and still moderate cow size and exceptionally functional, attractive daughters.

**ANGUS BREEDING PROGRAM IS BUILT ON MULTIPLYING THE BEST BULLS AVAILABLE IN THE WORLD. SIRE-MATE HELPS BREEDERS DEVELOP A SIMPLE, BUT STILL FLEXIBLE MATING PLAN THAT MINIMISES INBREEDING AND MAXIMISES GENETIC GAIN.**

# QUESTIONS ANSWERED

BY HARRY LAWSON, DECEMBER 2018

## WE GET ASKED MANY TIMES BY CLIENTS "WHAT NEW SIRES DO YOU HAVE THIS YEAR?"

**It's a good question, as we are always looking to find the next new sire that makes our elite team each year selected on a global basis. However, what is more important is that we continue to stay focused on our key breeding objectives and multiplying the top proven sires, rather than bouncing around using new sires just to be different or to try and create a perception that we are leading the pack.**

Each year we carefully evaluate our current team and new potential sires in Australia, the US and New Zealand. We then individually mate every female to create a better model to create a leading edge, predictable, consistent progression for our commercial herds.

In our large contemporaries we maintain you can't hide anything and the top performing, most fertile animals rise to the top. To produce an elite, consistent line of genetics (both bulls and the next generation of breeding females) you need numbers. Population genetics is all about

identifying where animals fall in bell curves for the traits that are important for commercial breeding herds.

The reason our heifers get easier to mate each year is that more and more drop into the optimal and the elite end of bell curves for more and more traits. This is the unique part of our breeding program that no other herd in Australia comes near. To back this up study the bell curves on pages 59 of this year's catalogue and you can get an idea of how unique these Sale bulls are compared to other Angus bulls. We also maintain genetic diversity as we control every mating at an individual animal level.

The importance of having moderate, fertile cows that can rebreed and maintain a 365-day calving interval even in a drought was never more evident than this year at Hopetoun. This year we, like all farmers in our local Jerdacuttup district were in the lowest ever recorded rainfall zone, which put our cows and business under extreme pressure.

**"WE ENCOURAGE BREEDERS TO USE THE PRINCIPLES OF OUR UNIQUE SIRE-MATE PROGRAM TO MAKE. FOLLOWING THIS SIMPLE PLAN WILL KEEP YOU DECADES AHEAD OF THE COMMERCIAL ANGUS INDUSTRY AT LESS THAN \$30 PER CALF WITH FAR MORE CONSISTENT, PREDICTABLE RESULTS.."**

2018 was the lowest year on record at Woolahra, Jerdacuttup.

Mixed aged cows at Joanna Plains December 2018. Selection for cow fertility and calving ease is the backbone of Lawsons Angus breeding program – animals that can rebreed in their normal restricted joining periods in tough seasons and high stocking pressure are critical for beef producers Australia-wide.

We soon realised we weren't the only ones under the pump and our empathy goes to all farmers Australia-wide that battled drought in 2018. The Drought Workshops we ran in Albany, Jerdacuttup and Esperance were well attended and it was a great opportunity for all of us to learn and share ideas on drought feeding and livestock management strategies in these tough times.

In our own herd, we always say we learn more in these tough years and it also puts our breeding nucleus through a bottleneck that they must get through to stay in the herd.

Overall we achieved an 85% preg test result with 3 rounds of AI over 45 days, this includes our two-year old M drop heifers. We believe this is an exceptional result and well above district average that is reporting some disastrous pregnancy rates. The ability of our cows to bounce-back and rebreed quickly under good and bad seasons is the trade-mark that our breeding program is renowned for.

Our bulls are also decades in front for carcass traits and every economic Index is also backed up when you compare not only the averages of current Angus Indexes and the bell curves (refer pages 59). Selection for calving ease and cow efficiency is an obvious starting point for any herd.

It's been very rewarding for us to see the continued success of our commercial clients even in the tough season that many of us have experienced across Australia in 2018. It was fantastic to see the recent success of our clients ANZ National Beef Carcass Competition at Beef Australia 2018, Rockhampton. Lawsons Angus WA clients dominated the MSA pasture fed section of these highly competitive National competition.

Bendotti's steers placed first and second in the pasture fed pen of three heavy trade chiller steers or heifers 260-340 kg class and third in the pasture fed pen of three medium trade chiller steers or heifers 180-260 kg class.

Congratulations to Col Thexton and John Bendotti (pictured above receiving their Awards) and Bagshaw family that dominated the MSA pasture fed awards at the ANZ National Beef Carcass Competition at Beef Australia 2018, Rockhampton.

Blue River Grazing steers that were only April-May 2017-drop, with generations of Lawsons Angus genetics Blue River finished first and sixth and seventh in the pen of three pasture fed export chiller bullocks class. If consistency is important then having 3 entries in the top 10 in Australia sums up why Col Thexton was so excited about the results as he has put a lifetime of work into producing quality beef.

Another Lawsons Angus client, the Bagshaw family, Boyup Brook, WA also finished in the top placings with their two teams of Angus steers. Steers were weaned January 2018 and backgrounded on quality pasture hay. They finished in fourth and fifth place in the pasture fed pen of three medium trade chiller steers or heifers 180-260 kg class. The groups weighed 445 kg and 430 kg liveweight and dressed 234 kg and 224 kg respectively.

Bagshaw steers, Boyup Brook, WA rose to the top MSA pasture fed awards at the ANZ National Beef Carcass Competition at Beef Australia 2018, Rockhampton.

**As we strive to improve our genetics and management systems, we maintain our focus of continuing to find ways to increase productivity and financial returns for progressive beef producers.**

## NOT ALL ANGUS BULLS ARE THE SAME AND THEIR GENETIC DIFFERENCES ARE WILDLY DIFFERENT.

**We often struggle to explain the difference between a Lawsons Angus bull and other Angus bulls and breeding programs. It's not all just numbered based comparisons, natural selection still plays a big role in our breeding herd in terms of who stays and who goes.**

Having 100% AI/ET, running animals under high stocking rates, short restricted breeding seasons and an annual structural assessment provides the "stress test" for all our breeding females and bulls. In terms of the underlying genetic direction of our herd, we think this is also our biggest point of difference. A great deal of time goes into the research and observing how animals perform under a wide range of environments to find the optimal genetic ranges for each of the main economic traits (calving ease, growth, mature size and carcass composition).

Searching the globe for potential sires is also crucial to genetics advancement on so many levels. Cumulative genetic progress still comes down to setting our (and our clients) genetic direction and implementing the plan year in year out. We don't rely on computer generated matings, although we think these are great tools and provide us with what is theoretically possible in creating a new frontier. Our underlying management systems, data collection and most importantly our ability to utilise the information

---

**"UNDERSTANDING THE BELL CURVES IS FUNDAMENTAL FOR COMMERCIAL HERDS TRYING TO IDENTIFY WHERE THEY SHOULD BE SOURCING BULLS FROM."**

---

in every individual mating are the big IP differences that are often not that well understood. Often those performance herds that have the best breeding programs and do not overfeed bulls are also the best value bulls to buy. The hardiness and toughness of our bulls and females in a range of environments gives us great confidence that our "stress test" and bull development program works where it counts.

### **It's all in the curves...**

In trying to explain the theory that all Angus bulls are not the same, we need to dig deeper than somewhat superficial averages. Averages gives us some idea on how these group of bulls compare with other Angus bulls, but the bell curve analysis is a lot more revealing on what is truly going on behind the scenes. Understanding the bell curves is fundamental for commercial herds trying to identify where they should be sourcing bulls from. The huge variance across even the best performance herds let alone the breed was a surprise even to us.

To go back a step, cattle have around 22,000 genes with most traits in animal genetics involving hundreds and in many instances thousands of genes. Population genetics involves normal distribution curves (or commonly referred to as bell curves because of the shape). What genetics is about is figuring out through performance recording, pedigree and DNA testing (genomics) where an animal sits in the bell curve

# ALL ANIMALS ARE EQUAL, BUT SOME ANIMALS ARE MORE EQUAL THAN OTHERS.

– George Orwell

for each trait we want to measure. Two thirds (68%) of the animals have a value for any trait within one standard deviation from the mean; 95 per cent within two standard deviations from the mean and 99.7 per cent within three standard deviations from the mean. Breeding or animal selection is really about manipulating bell curves and shifting animals into optimum or preferred ranges for each trait. This is often difficult for lowly heritable traits like fertility) or antagonistic traits like birth weight and growth, where generally if you improve one the other gets worse, so identifying animals that defy these odds is a crucial part of animal breeding.

Firstly, we need to set breeding objectives and decide on our plan for which part of the bell curve we want to sit. For example, we may want to improve marbling but not at the expense of calving ease and fertility, so this may limit our ability or rate of progress on marbling. We only need to look at Wagyu cattle to see the impact of single-trait selection. In our herd we have developed clearly defined breeding goals and targets for each trait. Analysing our bell curves shows how unique these Sale bulls are and the tight range that these bulls fit into for each trait. This is key to giving clients a genetic pathway that provides a balanced approach to genetic improvement. This system is what provides genetic consistency and predictability from both a genetic and a financial aspect.

In practical terms we try and provide large numbers of animals that fall within optimal ranges for each trait. We don't necessarily have the extreme top end for each trait, but our bell curves are skewed towards the right end of the bell curves for each trait. For example, we don't have the highest growth bulls in the breed because if we did this would come with excessive mature cow weight (MCW) and calving issues, however, we still have bulls that are well above average for growth (Sale average is +90 for 400D vs +79 breed average) and 100% of Sale bulls are suitable to use on heifers. They are also in the top 15% of the breed for carcass weight (CW), top 7% for marbling and top 15% for Eye Muscle area (EMA). Again, it's not just the average that is important, if you look at the variation (spread of animals or tightness of the bell curve) you can see we have much sharper, tighter bell curves, so less of a range or variance in all key traits. This can only be achieved with generations of AI/ET and a PLANNED BREEDING PROGRAM.
