INTRODUCING *the new* PREMIUM SHORTHORN BRANDED PROGRAMME

THE STORY OF THOUSAND GUINEAS

The story begins in the North East of England in the 18th century, where Teeswater & Durham cattle breeds were being refined using selective breeding techniques by Charles and Robert Colling. This program would go on to give rise to one of the *most highly sought after beef cattle breeds* anywhere in the world... **THE SHORTHORN.**

The culmination of this breeding program was the birth of the bull Comet in 1804, who, in 1810 went on to fetch 1,000 Guineas at the Brafferton sale, breaking all records as the first bull to draw such a price tag.

THIS BLOODLINE would go on to be a key influencer in the Modern Shorthorn breed that is celebrated for its superb eating qualities.

SUPERIOR IN TASTE

WITH THOUSAND GUINEAS you will enjoy an open texture with a buttery flavour, a great bite *and lots of juice*. Perfectly suited for that special occasion when friends, family or colleagues come together to share a richly rewarding *moment in time*.

SPECIAL NOTICE TO BUYERS & AGENTS

NO VERBAL INSTRUCTIONS CAN BE ACCEPTED

1. All animals have been C.Ab certified free and have been inspected for breed type by Show and Sale Inspectors and Veterinary inspected. All testicle measurements are taken by accredited vets belonging to the association of Australian Cattle Veterinarians (AACV). General vet inspection done by Dr Ross Pedrana and Dr Henni Strydom.
2. In the interest of buyers and to prevent the occurrence of mistakes, all instructions concerning the collection, delivery and trucking or shipping of cattle and insurance thereon must be given IN WRITING at the Company's Instruction office. Such instructions are to be signed by the buyer or his representative.
3. Cattle will, as far as possible, be dispatched in the order in which instructions are received.
4. Agents may deliver any lots to other Agents if requested, but in such case the buyer is required to sign a delivery order.
5. When cattle are to be collected from other Agents, delivery orders are to be handed to the forwarding Agent by the buyer.
6. Instructions for dispatch of consignments comprising more than one owner must be signed by each buyer; no instructions will be considered complete until all have signed.
7. Insurance: Cover can be effected immediately instructions are given.
8. Buying Number System - a buyers number system will be in operation at this sale. All prospective purchasers must register at the Agent's Office and obtain a buyers number prior to commencement of sale.
9. GST - GST will be added on the fall of hammer to purchase price. You will be invoiced for purchase price plus GST.
10. NLIS - All cattle will have their NLIS buttons and will be transferred to successful purchasers number by selling agent at completion of sale.
11. Disclaimer - the Committee and/or their agents do not give any warranty as to errors and omissions if any in these particulars which they believe to be accurate when compiled. Prospective purchasers should satisfy themselves by inspection or otherwise as to the accuracy of the particulars.
12. Public Liability - Any person attending the sale does so at his/her own risk. All persons attending the sale release the Committee and vendors from all actions or demands due to any loss, death, damage or injury occurring on the premises. The Committee and vendors are not responsible and have no liability for any death, or injury to person or any loss of, or damage to any person attending the Show & Sale, their property or otherwise.
13. Indemnity - All persons attending the sale agree to indemnify the Committee and vendors from and against any liability, loss, damage, expense or claim which the Committee or vendor may incur, including to a third party, during or after the Show & Sale in all respects.
14. **VENDORS GUARANTEE ON FEMALES**
 1. It is a condition of all sales that Vendors warrant that all females catalogued and sold as unjoined are fertile to natural service within 12 months of sale;
 2. The Vendors shall refund to the Purchaser the purchase price paid (excluding any costs or expense of the purchaser) upon the Purchaser providing to the Vendor within 12 months of the sale date:-
 - a) A report from a licensed veterinarian certifying that in his or her opinion:-
 - i. There is no evidence that the female suffered any injury or illness subsequent to being sold to the Purchaser which could have affected her breeding ability; and
 - ii. There is no evidence that the female has been subjected to embryo transfer procedures.
 - b) A Statutory Declaration from the Purchaser warranting that in the opinion of the Purchaser the facts stated in the veterinarian's report are true and correct.
15. **VENDORS GUARANTEE ON BULLS**
 1. It is a condition of sale that Vendors warrant that all bulls are to be sold as fertile and capable of natural service within 6 months of the date of the sale;
 2. The Vendors shall refund to the Purchaser the purchase price paid (excluding any costs or expense of the purchaser) upon the Purchaser providing to the Vendor within 6 months of the sale date:-
 - a) A report from a licensed veterinarian certifying that in his or her opinion:-
 - i. The bull is infertile or incapable of natural service;
 - ii. There is no evidence that the bull has suffered any injury or illness subsequent to being sold to the Purchaser which could affect his breeding ability
 - b) A Statutory Declaration from the Purchaser warranting that in the opinion of the Purchaser the facts stated in the veterinarian's report are true and correct.

OUTSIDE AGENTS REBATE

A 2% rebate is offered by the vendors to all outside agents who register in writing 24 hours prior to the sale, purchase and pay within the terms of settling agent.

FREIGHT REBATE

\$1.00 per km, to a maximum of \$500 for each purchaser who buys 4 or more live animals at auction.

The best a steak can get!

193 Macquarie Street, Dubbo • Phone 6882 4477

PREPARE YOUR BULLS BEFORE JOINING

Vaccinating bulls is the key to prevention of vibriosis.

Vibriosis is a major venereal disease and can cause infertility and abortion in cattle.

Conception rates can drop as low as **40%**¹

Vaccinating bulls is effective and practical

- It can lead to increased pregnancy rates
- It has no adverse impact on testicular function and semen morphology²

AVAILABLE AT YOUR LOCAL RURAL SUPPLIER

1. Hum S. NSW Department of Primary Industries (DPI) February 2007. *Primefact*, 451.
2. Zoetis Study Number B930R-AU-14-285. Data on file.

SHORTHORN GROUP BREEDPLAN

Developed at the University of New England in Australia, Shorthorn GROUP BREEDPLAN is an advanced implementation of the Best Linear Unbiased Prediction technology (BLUP) for across-herd genetic evaluation of beef cattle. This evaluation is based on a wide range of information including the performance of the individual and its relatives for a number of traits, the genetic relationships between the traits and the pedigree links between animals and between herds. Predictions of genetic merit are expressed as Estimated Breeding Values (EBV's). EBV's are reported in kilograms relative to a base of zero set for each trait using historic performance records for the breed.

EBV's are a measure of an animal's ability to produce superior progeny. An EBV is based on the animal's own performance plus the performance of all known relatives, sire, dam, half-sisters, uncles, etc. Information on one trait can also help predict other correlated traits. EBV's adjust for many environmental factors which also contribute to an animal's actual growth rate.

A powerful feature of GROUP BREEDPLAN is its exploitation of pedigree linkage between herds. The level of use of common sires in SHORTHORN BREEDPLAN herds is assessed before the analysis is run. Common sires form genetic links between herds. It is these links which allow across-herd comparisons of Group EBV's.

On the basis of across-herd genetic linkage, one hundred and four (104) SHORTHORN BREEDPLAN herds in Australia were included in the 2000 SHORTHORN GROUP BREEDPLAN. A total of 4836 sires and 40640 dams were analysed, covering a range of performance traits.

HOW TO USE EBV'S

Gestation Length EBV indicates lighter birth weights and easier calving.

Birth Weight EBV indicates the genetic potential for birth weight. The lower the birth weight EBV of a sire the lighter is the birth weight potential of his progeny.

200-Day Milk (kg) is an estimate of sire's milking ability. This EBV indicates the effect of the daughters milking ability, inherited from the sire, on the 200 day weight of her calves.

200-Day Growth (kg) is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of a sire's genetic merit for growth to early ages.

400-Day Weight (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of a sire's genetic merit for yearling weight.

600-Day Weight (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of a sire's genetic merit for growth beyond yearling age.

Eye Muscle Area EBV (cm²) estimates genetic differences in eye muscle area at the 12/13th rib site of a 300kg dressed carcass. More positive EBVs indicate better muscling on animals.

Rib Fat EBV (mm) estimates the genetic differences in fat depth at the 12/13th rib in a 300 kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

Rump Fat EBV (mm) estimates the genetic differences in fat depth at the P8 site of a 300kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

Scrotal Size EBV (cm) is calculated from the circumference of the scrotum, measured in centimetres and adjusted to 400 days of age. This EBV is an indicator of male fertility in regards to semen quality and quantity. Higher (positive) EBVs indicate higher fertility. Scrotal size is also positively associated with earlier age at puberty of bull and heifer progeny.

Mature Cow Weight is an estimate of an animal's potential for growth to maturity.

Carcass Weight EBV is an indicator of the genetic difference in carcass weight at a standard age of 650 days.

Retail Beef Yield Percent EBV indicates genetic differences between animals for retail yield percentage in a standard 300 kg carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

Intra Muscular Fat Percent EBV indicates genetic differences between animals for intra muscular fat percentage (marbling in a standard 300 kg carcass). Sires with positive EBVs are expected to produce progeny with higher average marble scores.

ACCURACY

Accuracies are expressed as a percentage and give an indication of the amount of information available to calculate the estimated breeding value (EBV). The higher the accuracy, the lower the likelihood of change in the animal's EBV as more performance information is gathered on the animal and its relatives. Note that the higher the accuracy, the more information you need to increase it. That is, significantly more information is required to change an accuracy from 90% to 92% than it takes to change an accuracy from 40% to 50%.

HOW BULLS ARE RANKED ON EBVS

All EBV's are shown as + or - kg liveweight, EBV's are relative (to other EBV's) and are fixed on a set base level. This means that you can directly compare Group EBV's across herds and across years.

The first step is to decide what characters are important in your breeding program, then select the EBV(s) which fits the bill for your herd.

For example, if you are selling 14 month old steers and the last draft you sold could have been heavier without prejudicing your market, then a high EBV bull for 400 day weight will probably suit your system best because it covers records of calves weighed between 301-500 days of age, and is the best estimate we have for that trait.

You may need to consider more than one trait simultaneously. For example, setting an upper level on birthweight EBV while looking for increased 400 day weights will help to minimise calving difficulty while getting improved 400 day weights at the same time.

TABLE 1. AVERAGE EBV'S IN KGS FOR THE 2017 BORN 'N' CALVES ANALYSED IN THE 2019 APRIL SHORTHORN GROUP BREEDPLAN.

GL	BW	200WT	400Wt	600WT	MCM	Milk	Scrotal	CWT	EMA	Rib	Rump	RBV	IMF	Domestic Maternal	Export Maternal	Northern Maternal
-1.8	+2.9	+27	+38	+51	+43	+6	+1.5	+34	+4.3	-0.3	-0.3	+1.0	+0.5	+\$34	+\$36	+\$42

SELECTION INDEXES

SELECTION INDEXES rank animals for a single selection goal - profit.

They take the hard work out of knowing how much emphasis you should give to each of the many EBVs when selecting breeding animals - an index gives you a **single EBV** that reflect the value of an animal, in **dollar (\$\$\$)** terms, to your **breeding objective**.

Indexes allow balanced selection in the true sense of the word - they balance the amount of selection pressure that needs to be applied for growth, maternal, carcass and fertility traits to give you the most profitable herd over the long term - high indexing animals will rarely have the highest EBV for any single trait!

The process of balanced (index) selection involves a couple of logical steps to combine economics with genetic selection. Economic values for performance measures are calculated for each herd production and market situation. Using some tried and tested genetic theory these economic values are then used to calculate appropriate weightings for all the EBVs currently available. These weightings apply pressure to the right EBVs to achieve the **greatest long-term herd profit**.

For example the Shorthorn index for use in herds producing steers for the feedlot that will end up in Japan, values most highly, marbling and sale weight as well as the reproductive traits of weaning rate and calving ease.

INDEXES USE BREEDPLAN EBVS

The weightings are calculated to maximise profit by emphasising the EBVs that are most related to profit but at the same time they compensate for antagonisms (correlated responses) between traits, eg the quest for higher yield may encourage a negative emphasis on the fat EBVs but the positive emphasis between fatness and female fertility will moderate the downward pressure.

The Shorthorn society introduced two indexes a few years ago, one for Shorthorns destined for the logfed Japanese market and the other for producing heavy domestic carcasses.

WHAT DO INDEX VALUES MEAN?

Indexes are EBVs and just like an EBV for 600 day they indicate a potential difference in the progeny of the animals being compared. The distinction is that index values are in dollar terms and differences between animals indicate a difference in their ability to make profit within a commercial herd. Take two bulls Bull A with an index value of +40 and Bull B with an index value of +20. The figures indicate that progeny of Bull A will make more money for the herd owner (and other people in the production chain) than the calves from Bull B. As for all EBVs the mathematics are simple. Assuming the two bulls are given an equal split of available cows then the difference in expected profit from the two bulls will be the difference in the values divided by 2 [(40 - 20)/2]. You divide by two because only half the genes come from the bulls, the other half coming from the cows - which in this case were assumed to be of equal value.

	Bull A	Bull B
Index Values	+40	+20
Extra Profit per cow mated (half diff in EBVs)	\$10	
Profit per cow mated - if mated to random sample of cows - ie each bull has equal value cows - assume base profit per cow \$200	\$210	\$200
If mated to 100 cows in working life - extra profit	\$1000	

NB. The actual dollar values shown in this example would only equate if the herd the bulls were being used in has exactly the same specifications for market prices, weight gains and all other inputs as the herd used to set up the index. However if you choose an index that has been developed for a market and environment that is close to your system the ranking of the bulls will be fairly constant even though the actual dollar values may be quite different. And, not all the profit is made by the breeder some of the advantages are realised by feedlots and processors.

STAR BREEDER PROGRAM

BUY WITH CONFIDENCE

The **STAR BREEDER** program aims to maximise the reproductive integrity and health of stud and commercial stock.

A STAR BREEDER certified animal has been:

- ✓ Tested to show that they are not Bovine Viral Diarrhoea Virus (BVDV) Persistently Infected (PI) animals
- ✓ **Vaccinated against Pestivirus (BVDV)** to ensure they are protected from the effects of this infection
- ✓ **Vaccinated against Leptospirosis**, a reproductive disease and potential WH&S risk for cattle handlers
- ✓ **Vaccinated against Vibriosis**, a sexually transmitted cattle disease

You can be confident that every step has been taken to ensure these animals will not introduce preventable reproductive diseases into your herd. For more information talk to your Zoetis Cattle Representative, call **1800 963 847** or visit starprogram.com.au

Zoetis is proud to support the Australian Shorthorn Breeders' Society. We encourage all members to look for and support the Star Breeder Program.

Protection is best before Conception

Once your bulls and females are fully vaccinated, log onto www.starprogram.com.au and complete your details and the statutory declarations that your animals have been treated as per the STAR Breeder program.

You will then receive a STAR Breeder Program certificate for your stock, valid for 12 months from date of vaccination.

This is your buyer's quality assurance that you have taken all available steps to protect your animals against introducing reproductive disease into their herd.

STAR BREEDER PROGRAM

	Vaccination	6-8 weeks pre-joining pre-sale	2-4 weeks pre-joining pre-sale	Annual Booster
Test and Confirm bull/female is not a PI	Ultravac 7in1®	✓	✓	✓
	Vibrovax®	✓	✓	✓
	Pestigard®	✓	✓	✓

It takes Two

Vaccination program requires 2 shots to establish immunity

1st shot is the priming dose for the body's defence against a bacteria or virus; 2nd shot ensures immunity is established.

To fit in with farm management practices, the time between the 1st & 2nd dose of Pestigard® can be up to 6months.

Immunity is expected to develop within 14 days of the second injection. Pestigard® and Ultravac 7in1® can be used for up to 30 days after opening provided correct storage instructions as per the product leaflet are followed.

This program may commence up to 6 months prior to the Show & Sale

Now your bulls & females are Zoetis STARS and are ready for SALE

Landmark, your stud stock specialists.

At Landmark, the people you deal with have the combined years of experience buying and selling livestock to add real value to your business. With access to the best livestock network across the country, we can help you drive your stud stock business and provide more marketing opportunities. That's why more Australian farmers look to us.

Traits Observed: BWT,200WT,400WT,600WT,SS,FAT,EMA,IMF

N171 displays massive capacity and a unique combination of fat and muscle. He is a moderately framed, efficient sire who is built to handle the dry years. Raw data indicates higher IMF than EBVs would suggest. Dam is a top producing, moderate donor cow with ideal feet and udder. Semen Retained. Top 5% Rib Fat and CE Dtrs, Top 10% Rump Fat, Top 20% 200 day, Scrotal and EMA.

DON'T RISK PESTIVIRUS IN YOUR HERD

Productivity losses are a risk.

- 40-60% of heifers have never been infected and are susceptible to future infection.¹⁻³
- A pestivirus crash can reduce calves 25-50%.⁴⁻⁶

40-60%
Heifers
susceptible¹⁻³

Don't leave it to chance:

- Only Pestigard prevents nasal shedding of pestivirus to safeguard your heifers and cows reproductive potential.
- Start by vaccinating your heifers with Pestigard®

Nymagee gives you a great opportunity to purchase some full Futurity blood. Sired by Futurity Kenebri who was purchased by Yamburgan Shorthorns in 2016 for \$30,000, and out of one of the great donors at Futurity, OssiesEnia G56. A bull that really combines eye appealing phenotype, with tremendous genotype. An excellent spread of numbers here. 1/8 semen share retained for in herd use. No further call on the bull.

One of the first opportunities to purchase a Futurity Kokoda son. Kokoda was purchased in conjunction with TROJON Shorthorns for \$28,000 in 2016, and was then secured by ABS for his calving ease and IMF data. Two of the big profit drivers for the Thousand Guineas program. A very stylish, soft, easy fleshing calf here, admired by many.

LEPTOSPIROSIS CAN CAUSE CHRONIC FLU-LIKE SYMPTOMS IN HUMANS

It can spread from cattle to humans and can lead to stillborn or aborted calves¹

Only Ultravac[®] 7in1 prevents shedding of leptospires and can be used in calves from 4 weeks of age to provide early age protection. It also protects against five key clostridial diseases.

AVAILABLE AT YOUR LOCAL RURAL SUPPLIER

Don't risk the health of your family or your herd.

1. Zoetis (2013) Study Number: 6A33R-14-12-264.

DON'T RISK PESTIVIRUS IN YOUR HERD

Productivity losses are a risk.

- 40-60% of heifers have never been infected and are susceptible to future infection.¹⁻³
- A pestivirus crash can reduce calves 25-50%.⁴⁻⁶

40-60%
Heifers
susceptible¹⁻³

Don't leave it to chance:

- Only Pestigard prevents nasal shedding of pestivirus to safeguard your heifers and cows reproductive potential.
- Start by vaccinating your heifers with Pestigard®

A great opportunity here to purchase some outcross genetics. Fully imported Canadian embryo. Her dam Horseshoe Creek Sparkle Delight 1X is a full flush sister to 2X, who is now part of our donor female battery in Canada. Both 1X and 2X are proven breeders with embryos exported worldwide. Very soft, easy doing female with tremendous depth of body and eye appeal. AI to Futurity Maximiser JJM301 25/11/2018 and again 21/01/2019.

Sparkle Girl is out of another prolific breeding donor female at Horseshoe Creek Shorthorns, Canada., and sired by the \$32,000 Horseshoe Creek Bluebook, son of 2X and full sibling to SCXN421 who is also being offered in this sale. A rare opportunity to secure these Canadian genetics, with exciting prospects as we move towards the IGS system. N406 oozes breeding female, and will be a great addition to your stud herd. AI to Futurity Maximiser JJM301 on the 25/11/2018.

Marrington Effie N8 presents a great opportunity to purchase a dual female package from one of the top female breeding lines in the Marrington herd. Effie N8 was the 24-30month female class winner at 2019 Sydney Show and is a half sister to Marrington Hotshot H2 who was sold to Moombi shorthorns privately for \$18000. She is sired by Outback Sprys Genesis K272 who was purchased for \$18000 at Sprys 2016 sale and has bred exceptionally well for Marrington moderating frame size and injecting carcass shape and softness into our cattle. Sells with heifer show prospect Marrington Effie Q1 DOB 24/02/2019 at foot who is sired by Marrington Magician M36, a Yamburgan Zeus H140 son who was sold to Glengyron Shorthorns at 2018 National Shorthorn Show and sale for \$12000. We believe this to be a unique opportunity to purchase one of the premium females from our herd. Sells unjoined providing the purchaser option to flush or join to sire of choice.

PREPARE YOUR BULLS BEFORE JOINING

Vaccinating bulls is the key to prevention of vibriosis.

Vibriosis is a major venereal disease and can cause infertility and abortion in cattle.

Conception rates can drop as low as **40%**¹

Vaccinating bulls is effective and practical

- It can lead to increased pregnancy rates
- It has no adverse impact on testicular function and semen morphology²

AVAILABLE AT YOUR LOCAL RURAL SUPPLIER

1. Hum S. NSW Department of Primary Industries (DPI) February 2007. *Primefact*, 451.
2. Zoetis Study Number B930R-AU-14-285. Data on file.
