ON PROPERTY SALE

Tuesday, 13th March, 2018

**“Ellerslie Park”, Culcairn NSW
Commencing at Noon**

LANDMARK

A thin, curved line graphic positioned below the word 'LANDMARK'.

TO ENSURE YOUR COPY PLEASE BRING THIS ONE ON SALE DAY

DIRECTIONS: The Rennylea Angus sale is held at the Culcairn property, “Ellerslie Park” located one kilometre south of Culcairn on the Olympic Highway. Please turn west onto the Cummings road and enter the property through the open double gates. Culcairn is located 29 kilometres west of Holbrook and 49 kilometres north of Albury.

REFRESHMENTS: The Culcairn Early Childhood Centre caters for the sale. Please give generously to the Centre, the minimum charge is \$10 for morning tea and lunch. Rennylea supplies the scotch fillet and rolls for the lunch.

INSPECTION: The bulls will be available for inspection at any time by appointment. Please contact Peter (**60297078H and 0427 038 993M**), Bryan (**0429 038 993**) or Ruth (**0400 302 629**) to arrange a suitable time. The bulls will be penned by 9.00am on sale day.

ANIMAL HEALTH & WELFARE CERTIFICATION: The bulls have received regular 5-in-1 vaccinations over their lifetime. They are vaccinated against vibriosis (2x). The bulls are ear notched (tested negative for persistently infected pestivirus BVDV) and vaccinated against pestivirus. Rennylea Angus is JBAS8 under the New Biosecurity Plan. Breedplan recorded since 1985. The bulls carry 3 forms of identification, they are tagged at birth with both a management and a NLIS tag, and freeze branded at 12 months of age. The full health history is given to the buyer at the time of sale along with comprehensive post sale notes written by Holbrook Veterinarian Dr. Reon Holmes.

DELIVERY: “Our bulls on Your Property”. Rennylea will deliver for free, throughout NSW, Qld, Vic and SA following the sale. These arrangements may be in conjunction with other bull sales held in the area. In some cases, Rennylea delivery may require additional transport by the buyer to your property.

GUARANTEE: On page 4 & 5 is a copy of the unique Rennylea guarantee and your guide to caring for young bulls when you take them home, compiled with the advice of Dr. Reon Holmes BVSc. The working life of young bulls will be extended by following these recommendations.

SALE BY VIDEO AUCTION: The sale shed is in close proximity to the bull pens. The auctioneer sells the bulls by auction, with an electronic video and the full set of data for each bull projected onto the screen. The purchaser & price of the previous lot is displayed on two TV screens.

PLEASE NOTE: The bulls in this catalogue have never been handled with horses. We recommend that if you use horses that you move your new bull with other non-cycling cattle, so that they are not spooked by a new situation. We recommend that the new bulls are moved on their own by motorbike, as that is what they are used to. Gradually introduce the movement of bulls with horses, so they can adapt in their own time.

AUTUMN BULL SALE

Tuesday 13th March, 2018

“Ellerslie Park”, Culcairn NSW
Commencing at NOON

View the videos of the bulls prior to the sale on our website

SALE TERMS: All lots will be governed by the usual sale conditions, available on sale day. A 3% rebate is offered to outside agents introducing buyers prior to sale day. To qualify for this rebate they must do two things.

- i. Introduce the client in writing to the vendor (via email rennylea@bigpond.com) prior to the sale.
- ii. Settle within 7 days.

Agents not meeting the above terms will be entitled to a 1% rebate.

AUCTIONS PLUS & PHONE BIDDING: Please contact the Albury office of Landmark (02 60251677) to arrange phone bidding, 24 hours prior to the sale or one of the agents listed above.

Sale Catalogue Disclaimer All reasonable care has been taken to ensure that the information provided in this catalogue is correct at the time of publication. However, neither the vendor or the selling agents make no other representations about the accuracy, reliability or completeness of any information provided in this catalogue and do not assume any responsibility for the use or interpretation of the information in this catalogue. You are encouraged to seek independent verification of any information contained in this catalogue before relying on such information.

Dear Cattle Breeder,

This autumn 2018 sale is the final sale for Peter Govan, who joined the Rennylea business at the beginning of 2001 with his wife Sue. We pay tribute to the significant contribution he has made, his knowledge and practical cattleman skills. Peter has run the logistics for all the sales since we went to auction in 2004 and the results speak for the professionalism and ability he has contributed. Everyone at Rennylea wishes him the best for his future pursuits. We are also fortunate that Sue is staying on to manage the database and Rennylea's shop front in a new office at Ellerslie Park.

In December, the Angus breed in Australia moved to a Single Step analysis, using the true genetic relationship between sire and dam (also known as the relationship matrix) informed by the animal's genotype, to produce the breeding values. If the sire and dam have also been genotyped, this produces the greatest accuracy possible in the prediction of future performance. Rennylea has performed more than 4,000 genomic tests on our animals to date, including all retained L, M and N drops, and the k spring bulls. This has added an immense amount to our own and the breed database.

There have been 15 Rennylea bulls of the 299 bulls tested to date in the Angus Benchmarking program. Rennylea C511 was the outstanding performer in cohort 1 and G255 is confirmed as the leading carcass sire in cohort 4. **Importantly, their Breedplan has been enhanced by data on the hard to measure carcass traits.** With the addition of genotypes, we expect no less in performance and accuracy of the 88 bulls in this catalogue.

Note the 4 sons of Rennylea G255, the Benchmarking sire who outshone all others in his carcass performance in cohort 4. These bulls are all crackers. Rennylea H556 is in Cohort 6 of the Sire Benchmarking project. Particularly note the carcass performance on these, all genotyped and averaging a staggering average IMF% of 3.9 over the 14 sons. There are some standout sons of international bulls, Matauri Reality and EF Complement. Also note the bulls sired by industry sires, VTM J618 and SPL J231.

There are 17 herdbook registered bulls, particularly note **lots 1, 2, 11, 55, 66, 82, 83.** Bryan, Peter and Ruth have selected some pick lots, **1, 8, 13, 16, 17, 20, 28, 32, 37, 56, 61, 73, 74 and 88.**

Please contact Bryan (0429 038993) or Peter (0427 038993) at any time to discuss bulls in the catalogue and your requirements.

Thank you for your interest and support.

*Bryan, Lucinda, Ruth & Anthony Corrigan
Peter & Sue Govan & the Rennylea team*

RENNYLEA BREEDING OBJECTIVES

Watch this short video, "Creating an Efficient Cow Herd" @ www.rennylea.com.au which gives a fantastic explanation of the Rennylea Breeding Philosophy.

The Rennylea herd has had a very long commitment to traits that lower cost of production and increase net profit per hectare.

The genetic trends for the Rennylea herd compared to the angus breed genetic trends will give our clients and potential clients, confidence in our programme. **We do this by maximizing selection pressure in the 'free traits'; fertility, structure, temperament and carcass quality and balancing the 'cost' traits; milk, growth and muscle.**

1. Fertility. Firstly and foremost are calving ease and fertility, described by days to calving, calving ease and birthweight. Heifers calve at 2 years for 6 weeks.

Trait	Long Term Trend Rennylea Herd	1402 calves Breedplan Dec 2017
Birth Weight	Rennylea consistently below breed average	.7kg below breed average
Gestation Length	Rennylea consistently shorter gestation over 20 years	Top 30%
Calving Ease Direct	Rennylea consistently > breed in the last 20 years	Av. is +.5, top 45%
Calving Ease Daughters	Daughters following CE direct trend	Av. is 0.7, top 45%
Days to Calving	Rennylea cowherd 1.5 days better than breed av.	Av. is top 20% of breed
Mature Cow Weight	Key Performance indicator to control cost of production	Rennylea unique, +88 and 400 wgt is +87
Scrotal Size	Followed breed average	> Breed av.
200 D milk	Cost trait, Rennylea above breed average without sacrificing fertility	Average is +19

Moderate fat cover and mature cow weight are essential in a highly fertile herd. Adverse trends in these traits can significantly lower your herd fertility in one generation. **Rennylea has a unique maturity pattern, with mature cow weight very close to 400 day growth.**

2. Growth Rennylea selects for fast growth to 400 days, and a moderate maturity pattern, reflected in the mature cow weight and 400wt being the same. Top 30% 600 day growth performance a bonus.

3. Carcass The Rennylea profile is unique, with both EMA and IMF **averaging in the top 5% of the breed across all calves.** Incredible progress has been made in increasing eye muscle area and intramuscular fat, maintaining fertility and functionality and maintaining our focus on cost of production. Carcass quality contributes 15% of net profit.

Trait	Long Term Trend Rennylea Herd	1402 calves Breedplan Dec 2017
Carcass EMA	Rennylea cattle exceptional for this trait	Av. +78 top 5% of breed
Rump and rib fat	Rennylea's unique point of difference, positive genetic fat	Both are positive, 0.6 & 0.1
Retail Beef yield	Cautions approach, linked to cow fertility	Av = -.1
IMF%	Important trait for angus, 'free trait' for the breeder, profit driver for feedlotter and very important for the consumer	Currently ALL calves av. top 5% of breed. +3.3

The breeding challenge: as performance increases, to maintain fertility and optimise the balance between fat, maturity pattern, meat quality and muscle in a sustainable cow herd. This herd profile reflects our long term commitment to increase the net profit for our clients.

Bryan Corrigan
January 2018

Reporting of Recessive Genetic Conditions

In the Rennylea catalogue, bulls that have a probability of carrying the recessive genes AM, NH & DD have been tested and identified. We have taken the step of adding this information to the bull's traits. We do not consider these conditions to be a significant commercial issue, any clients who wish to discuss further please contact one of the Rennylea team. Rennylea will refund \$500 per calf mortality proven to be DD genotype and sired by Rennylea bulls.

The following nomenclature identifies the status of the bulls in the catalogue.

AMF Tested AM free

AMFU Based on pedigree AM free. Animal has not been tested

AM% ___% probability the animal is an AM carrier

AMC Tested AM-Carrier

For NH and DD simply replace AM in the above table with NH.

RENNYLEA BULL GUARANTEE

Many seedstock producers guarantee their bulls. **RENNYLEA** offers a unique Bull Guarantee as it also covers the client's risk of a bull not siring a satisfactory number of calves due to the fault of his own fertility. This guarantee needs to be read with the accompanying bull management notes, written by Dr. Reon Holmes. **RENNYLEA** can offer this guarantee as bulls offered have passed a rigorous test for:

- structural soundness,
- reproductive soundness

This test identifies and removes the bulls in every drop that are unfit to be mated. Note that these results are valid for the next mating only and annual testing is strongly recommended.

WHAT DOES RENNYLEA GUARANTEE?

1. The Bull

If for any reason, a tested **RENNYLEA** bull is unable to sire calves as a result of a failure of his **own fertility** during his first mating we will either:

- replace him with an equivalent Bull
- give credit towards future purchases, under a private treaty negotiation
- refund the purchase price of the bull

2. Compensation for lost pregnancies

Furthermore, we also compensate you for the pregnancies that the bull failed to get for you, by means of either:

- a credit towards future purchases, under a private treaty negotiation
- a cash refund equal to the loss of pregnancies incurred by the owner

HOW DOES IT WORK?

Let's assume that you mate a bull to his mating potential of say 50 cows. If the cows are healthy, cycling and free of diseases capable of causing reproductive failure, you should expect at least 43 (85%) of them to conceive over a 9 week joining period. Let's say that only 30 conceive and it can be independently confirmed by a registered veterinarian of a fertility problem in the bull **not caused by injury or acquired disease**. Rennylea will resolve these issues, in two ways by agreement. 1. We pay the owner a commercial difference in value between the 13 empty cows with 13 pregnant ones. Furthermore, we give a credit or refund on the purchase price of the bull, proportional to the missed and/expected pregnancies. In this case the owner will receive 13/43 (30%) of \$3000. 2. Alternatively, we refund the purchase price of the bull who is sold on Rennylea's behalf or delivered to a place mutually agreed upon by both parties.

RENNYLEA does their utmost to produce bulls that are valued by their new owner for their ability to lower their cost per pregnancy and to improve their herd's genetic worth. This guarantee, amongst the best on offer in Australia, takes away the financial risk within the vital first year of purchasing a bull and clearly demonstrates the confidence that we have in our bulls along with the commitment that we have to you, after sale day. **This guarantee does not replace your obligation to follow the recommendations on page 5, and to observe and manage bulls during joining.**

YOUR OBLIGATION TO ENSURE YOUR BULLS' MAXIMUM WORKING LIFE & CALVES

1. UPON ARRIVAL

- i. Ensure your new bulls socialises with a group of animals, (anything except other bulls) in the yards, when they arrive.
- ii. Run the new bulls with a small group of empty females, (he has come from a different herd and may not have had exposure to some of the normal pathogens present in your herd). **This must be done, only two new bulls at a time, with the empty females, for a period of 2 to 4 weeks. Ideally give the cows prostaglandin every 2 weeks so they continue to cycle.**

2. PRE JOINING

- i. We recommend a breeding soundness examination(BSE), including structural assessment, testicular palpation and (ideally) a service ability test. This is mandatory for second joining and older bulls each year. It will improve the fertility performance of the herd, by removing non working bulls out with the cows. If bulls are not service tested it is essential you observe the bulls serve in the first week on joining.
- ii. Keep vaccinations up to date, vibriovax, pestivirus and leptospirosis 7 in 1 and an annual drench, 4-6 weeks prior to joining.

3. JOINING - new bulls have the highest risk of breakdown in the herd, this risk can be reduced by:

- a. **PROTECT a new bull by not overjoining, 40 females per bull maximum.**
- b. **It is recommended, if single sire joining with a new bull, to rotate him with a proven bull for at least one cycle. Also, it is good practice to rotate proven bulls for the last cycle with all new bulls.**
- c. **Recommend that all females are joined in groups with 2 bulls.**

“Most new bull fertility issues develop during the joining period, rather than being pre existing problems, this means that bull surveillance during the joining period is essential”

ONCE THE JOINING IS SET UP, MONITORING IS ESSENTIAL TO IDENTIFY ISSUES AS THEY DEVELOP

Your new bulls need to be run in mobs that are easily monitored, check them 2 to 3 times a week for the first three weeks and then weekly thereafter. This includes looking for,

- a. the bull serving, (this has not been successful until the bull thrusts). If bulls are continually mounting without serving it is often a sign the bull has developed a penile infection and needs to be rested and replaced immediately.
- b. lameness,
- c. evidence of penile or prepuce swelling or inflammation
- d. signs of ill health, lethargy, etc.
- e. numbers of females cycling, (for every 21 females, one cycles each day at the commencement of joining). After three weeks of joining, there will be one cow cycling every three days in 21 females.

4. POST JOINING

Annual breeding soundness evaluation is a non negotiable procedure. Good management of bulls is a year round procedure.

Bulls need to be removed from the cows, at the same time, to create their new mobs. This will limit the amount of potential injuries by reducing the number of bull interactions.

Bull paddock management is very important to minimize injury between joinings. The bulls need enough room to reduce fighting, restricted feed and water will increase interaction.

The target between joining is to restrict weight gain in older bulls to prevent breakdowns. Ideally young bulls have access to a higher level of nutrition as they continue to grow.

Early pregnancy testing is essential for good female management and detection of surprises. The earlier the pregnancy testing is undertaken, the more likely the cause of the problem will be identified. This will not only give you early notice of the problem but also help in formulating a plan to help reduce the chance of the problem occurring in the future.

Reon Holmes BVSc

ESTIMATED BREEDING VALUES AND \$INDEX VALUES

Accuracies: Provides an indication of the reliability of an EBV. As more performance information becomes available on an animal, its siblings, relations or progeny, then the accuracy of the EBV for a particular trait will increase. The accuracy also indicates the potential for change in values over time. Accuracies are influenced by the heritabilities of the traits and the genetic associations existing between them. For lowly heritable traits, more information is required to achieve a similar accuracy to that of highly heritable traits. Note that the heritabilities quoted are approximate.

Lowly heritable traits (less than 20%) include: fertility traits such as days to calving and calving ease, and milk.

Medium heritable traits (20% to 35%) include gestation length, eye muscle area, 200 and 400 day weight, and rib fat.

Highly heritable traits (over 35%) include rump fat, scrotal size, 600D weight, mature cow weight, birthweight, marbling and retail beef yield.

1. Calving Ease

Calving Ease DIR (%): Estimates of the genetic differences between animals in the ability of 2 year old heifers to calve without assistance. Heritability of calving ease traits is 10% and positive values are desirable. Calving ease is negatively associated with increasing BW, the correlation is -.5.

Calving Ease DTRS (%): Estimate of the genetic differences between animals in the ability of their two year old daughters to calve without assistance. Positive values are desirable.

2. Birth

Gestation Length (days): Estimation of the genetic differences between animals in the number of days from the conception to the birth of a calf. A negative value is desirable. Heritability of GL is 65%, the correlation with CE direct is -.27.

Birthweight (kg): Estimates of the genetic differences between animals in calf birth weight. Small or moderate birthweight EBVs are considered desirable. The heritability of birthweight is 39%.

3. Growth

200 Day Milk (kg): An estimate of the genetic differences among animals in milk production potential, expressed in calf growth performance. The heritability of the milk trait is 10%.

200 Day Growth (kg): Estimate of the genetic differences among animals in weight at 200 days.

400 Day Growth (kg): Estimate of the genetic differences among animals in weight at 400 days.

600 Day Growth (kg): Estimate of the genetic differences among animals in weight at 600 days. Heritability of the growth trait increases with age, 12%, 23% and 35% at 200, 400 and 600 days.

The optimum growth figure will be governed by the production environment. Note that the higher the growth figure at 600 days, then the animal will not only be bigger and reach a higher bodyweight, but will also have a later maturity pattern.

4. Carcase

The Rennylea herd has been independently scanned for eye muscle area, fat cover since 1990 and for marbling since the mid 1990's.

Carcase Weight (kg): An estimate of the genetic difference among animals in hot standard carcase weight at 650 days of age. The heritability of carcase weight is 41%.

Eye Muscle Area (cm²): These estimate breeding values of the genetic differences among animals in eye muscle area at the 12/13th rib site on a 300kg carcase. The heritability of EMA is 20%.

Rib Fat (mm): An estimate of the genetic differences in fat depth at the 12/13th rib site on a standard 300kg carcase. Significantly negative values are not desirable for either fat ebv. Heritability is 45%.

Rump Fat (mm): An estimate of the genetic differences in fat depth at the 8th rib site on a standard 300kg carcase. Heritability is 32%.

Intramuscular Fat (%): An estimate of the genetic differences in the percentage of intramuscular fat at the 12/13th rib site in a 300kg carcase. Heritability of IMF% is 32%.

5. Fertility

Mature Cow Weight (kg): Estimate of the genetic differences in cow weight at 5 years of age. Rennylea believes this is a key fertility EBV and optimum mature cow weight is as close as possible to the 400 weight. Heritability of MCW is 40%.

Genetic rib and rump fat are heritable. Slightly positive genetic fat cover is important and combined with mature cow weight are useful predictors for a high herd fertility profile under a production system which limits feed intake. (confirmed by Beef CRC maternal productivity research). This is accentuated for 1st & 2nd calvers.

Days to Calving (days): This EBV is an indicator of female fertility based on time between the cow's first exposure to a bull and when she subsequently calves. This ebv has the lowest heritability of all the researched traits at 7%, and has low accuracy.

Scrotal Size (cm): These are estimates of the genetic differences among animals in scrotal circumference at 400 days. The trait is highly heritable at 39%. Positive values are favourable.

6. Dollar Index Values: Dollar index values have been developed to combine the important ebvs for different markets, into a single value. They are another piece of information that may be used when selecting bulls to target particular markets, and ranking them for that purpose. The indices have recently been revised and a full explanation is on the Angus Australia website www.angusaustralia.com.au

FERTILITY TESTING

Veterinarians from the Holbrook Veterinary Centre and Holbrook Cattle Vets assess the bulls for breeding soundness, prior to cataloguing. Any purchasers who require a Certificate of Fertility may request on sale day.

STRUCTURAL ASSESSMENT

The structural evaluation and scanning for carcass traits has been done by Mr. Jim Green from Beef Excel. Jim has been doing this work at Rennylea for many years.

INTEGRITY OF DATA

PHENOTYPES: Every trait published on Rennylea bulls are backed up by the bull's own performance data, collected and transferred electronically to Breedplan. At each collection point recommended by Breedplan, data is collected on all cattle in the herd, except when they have been sold. Sue Govan manages the data and recording system.

GENOTYPES: Rennylea genotypes every animal in the herd at birth, as part of our commitment to ensuring maximum accuracy for selection at a young age.

PARENTAGE: In Spring 2015, hair sample for 406 K bulls were tested with the i50K genomic test. In those bulls there was only 1 parentage error. This is a level of accuracy never seen before globally by Zoetis, and demonstrates the integrity of Rennylea systems.

ONGOING ANIMAL HEALTH CARE

Bovine pestivirus can cause significant reproductive losses and can affect the performance of a bull, should it become infected during joining. The disease is widespread throughout Australia and may already be affecting the reproductive performance of your herd. The disease is spread by carriers of the virus, known as persistently infected (or "PI") animals. PIs are cattle that have been exposed to the virus as a foetus, and carry the virus for life, spreading it throughout herds. Introducing a PI bull into a breeding herd can have major consequences on the number and health of calves born. We recommend you seek veterinary advice and monitor the incidence of BVD in your herd.

Vibriosis is a sexually transmitted disease that is spread by bulls which show no physical signs of carrying the disease. However, the disease can cause damage to the uterus, affecting the establishment of a pregnancy. Often, the only indication that the disease is present is a low pregnancy rate, or mid term abortions. The disease can also cause permanent infertility in cows. Vibriosis in your herd will cost you calves, and money. We recommend bulls are vaccinated annually for vibriosis a small cost on your investment.

Leptospirosis is a serious disease, both in cattle and in humans. The disease is spread by animals which have been infected and shed the bacteria in their urine. The disease can cause reduced pregnancy rates and abortions, as well as clinical disease in calves and dairy cows. Humans working with cattle are at risk of contracting this debilitating disease, which can cause chronic illness. Vaccination of cattle is the best way to protect yourself, your workers and your families.

These bulls have all been tested to ensure that they are not persistently infected (PI) with pestivirus, and have been vaccinated with 2 doses of Pestigard®, Vibrovax® and Ultravac® 7 in 1. By purchasing a Rennylea bull, you are minimising the risk of this bull introducing, spreading and becoming infected with this disease during the critical joining period.

Remember, to ensure the long term health and productivity of your bulls, it is important that annual booster doses of these vaccines are given to your bulls pre joining.

Beef Class Structural Assessment System

The Beef Class Structural Assessment System was designed by the Beef Improvement Association and breed societies, and funded by Meat & Livestock Australia to enable selection to improve structural soundness.

Rennylea uses a strict assessment program to assess the structural composition of their herd to best guarantee the soundness of their stock, the cow herd is assessed by Peter and Bryan, and Sale bulls are independently assessed by Beefxcel.

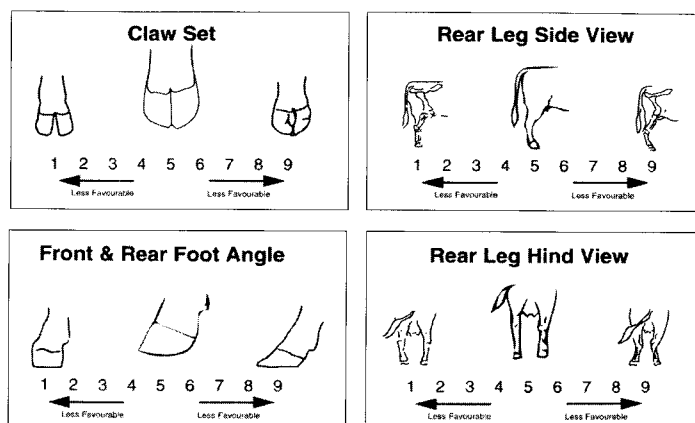

An Explanation of the Beef Class Structural Assessment System

The Beef Class Structural Assessment System uses a 1-9 scoring system for feet and leg structure;

- A score of **5** is ideal;
- A score of **4 or 6** shows slight variation from ideal, but this includes most sound animals. An animal scoring 4 or 6 would be acceptable in any breeding program;
- A score of **3 or 7** shows greater variation but would be acceptable in most commercial programs. However, seedstock producers should be vigilant and understand that this score indicates greater variation from ideal;
- A score of **2 or 8** are low scoring animals and should be looked at cautiously and inspected very closely before purchasing;
- A score of **1 or 9** should not be catalogued and are considered immediate culls.

TEMPERAMENT

The temperament or docility score separates animals from the same contemporary on their calmness in a confined area. Animals which are extremely quiet (touchable) score '1'. Animals that are aggressive or extremely agitated in the crush are scored as '5'.

**FOR MORE INFORMATION PLEASE CONTACT:
BEEFXCEL: JIM GREEN 0402 003 137**

SEMEN INTERESTS

The bulls are sold with full physical ownership by the purchaser and the right to the salvage value of the bull. Purchasers have the right to collect and use semen within their own herd.

There are many bulls available on the semen market and few bulls have significant sales of semen. Rennylea is maintaining marketing rights and 50% of future proceeds to protect the future marketing of our genetics. As further data is accumulated on, through progeny and relations and accuracy increases, there will be some bulls whose contribution will continue to be useful both in our herd and the industry. In those cases, it is to the owner and Rennylea's advantage to co jointly market the bull. All expenses for co marketed semen will be shared. Collection costs for semen used by Rennylea, will be at Rennylea's expense and at a mutually agreed time and place for the owner of the bull. We can also organise collection of semen for the purchaser at their expense.

REGISTRATION TRANSFER DETAILS

Do you wish to have the Angus Society of Australia's registration of your bull transferred into your name?

No

Yes

Society ID No.

ACCOUNT SETTLEMENT

The signature of your Agent is required if you elect to settle through an Agent.

Agent: Signature:

The bulls in this catalogue were filmed for the web based clips on the 6th February, 2018. Their performance data is also available with the video clips. To view these please go to www.rennylea.com.au and follow the link to where the video clips are hosted. You will be aware that Australia Post has effectively 'slowed down' the regular mail. It now takes up to 4 weeks for some distant clients to receive their catalogue. Hence we have commenced production earlier than usual and the catalogues may arrived before the video clips are posted. Bear with us!

RR

RENNYLEA QUALITY ASSURANCE

The bulls in this catalogue have been measured for every trait at every submission point. They are meticulously recorded and highly accurate.

Every bull in the catalogue has been:

- ✓ Weighed and tagged at birth
- ✓ Weighed at 200, 400 & 600 days in large management groups
- ✓ All mature cows in the herd are weighed for mature cow weight, & condition scored every year
- ✓ Calving ease and gestation length data submitted
- ✓ Scanned for eye muscle area, intramuscular fat and fat depth at the rib and rump sites (400 days), testicles measured
- ✓ Parent verified through DNA, i50k test
- ✓ Those with known recessive gene frequency > 5%, are tested
- ✓ DNA has been measured for production traits with the i50k SNP test, and incorporated into their EBV's through single step
- ✓ Before sale they have been independently assessed for feet, legs, sheath, testicles and docility
- ✓ Before sale they have been independently assessed for fertility by veterinarians from the Holbrook Veterinary Centre
- ✓ Rennylea is a JBAS8 herd and bulls are eligible for entry to all states
- ✓ Tested negative for persistently infected pestivirus, BVDV, & vaccinated
- ✓ Vaccinated for 5-in-1 and vibriosis
- ✓ They are sold with a lifetime animal health record
- ✓ They carry 3 forms of ID, management, NLIS & freeze branded
- ✓ They are delivered free to NSW, VIC, SA, Qld to major centres, sometimes in conjunction with other bull sales
- ✓ Our product is guaranteed, follow the guidelines in the catalogue.
