

Semen Evaluation Report

SER18-1123

Date of collection: 06 November 2018

Owner: Newstead Pastoral
Mullaley NSW

Method of Collection: ~~Manual~~ / Electrojac / ~~Natural Service~~

Name	Tag	Breed	TM%	FPM%	Morph % Norm
Trent Bridge N126	TBRFN126	Wagyu	48.5	39.1	91

The bull listed above has had semen collected and frozen by Australian Premier Genetics for domestic use only. The semen was extended using AndroMed by Minitube and tested using the SpermVision CASA system. The post thaw testing of the semen meets and exceeds the minimum standards of 40% Total Motility and 35% Forward Progressive Motility. A full Morphology test was done on the frozen semen, with very good results. Minimum standard for Morphology is 70% normal sperm, which this semen is well above.
