

TAUNTON FARM WAGYU DISPERSAL

Included in this sale is the genuine dispersal of Rob & Julie Saunders, Taunton Farm registered Fullblood Wagyu Herd, situated at Cowaramup near Margaret River in the South West of WA.

The Stud was established in 2007 and the female bloodlines have been based from embryos originally purchased from the high Tajima bloodlines from Goshu Wagyu and Kuro Kin Studs and includes some of the iconic bloodlines in the breed.

The cows and heifers have all been transferred over to the SNP testing process.

The cows were Preg tested on 7th Nov 2019 and were Veterinary checked for Structural Soundness and Breeding Capability.

WA is Johne's free and according to our Vet, there has never been a recorded positive test sample in the State.

The Bulls have been semen tested and checked for structural soundness as per the requirements of the sale on the 12th Nov 2019.

All the cows, except the "P" Heifers, have been running back with a son of World K's YASUFUKU Jr bull TAUFL00001 since 18th June.

The Calves at foot were vaccinated with 5:1 at marking, and all the Bull calves have been left entire. They have not as yet been DNA tested for Parent Verification or Registered.

All the calves were Sired by TAUFL00001 a son of YASUFUKU JR, with the exception of the calf Q6 from TAUFD00002 which was sired by ITOHANA 2, through AI.

We do not creep feed our calves and the herd is managed along the same line as our commercial Poll Herefords with the only supplementary feeding being pasture hay during the leaner months of the year.

Worth noting, that any lumps showing high on the necks of the cattle in the photos are due to Selenium (Selovin) injections given at weaning time. Evidently this is normal.

For further detailed information, including History, Management, Carcase Results, Further Photos etc, please contact Rob on 0427276285 or Email;- tfhome2@westnet.com.au
