Hoch & Wilkinson is Clermont's Real Estate Agent of first choice and was formed by Tony Hoch & John Wilkinson in November 2006.

The company performs livestock sales, rural property sales, urban real estate sales, property management as well as commercial and clearing sales, primarily in the Clermont & surrounding districts.

The company is a member of the Real Estate Institute of Queensland & the Australian Livestock & Property Agents Association.

## Are you frustrated with your current process of organising and printing your sale catalogues?

We are proud to have worked with Jono and the Burenda Angus team for the last 5 years on their catalogue design, print and mailout and would be more than happy to chat about how we can make it easier, faster and cheaper for you as well.

**Call 1800 288 092 and ask to speak to Charles**

“  
Thanks to Quantum Marketing we were able to produce an excellent catalogue for our Roma Bull Sale, on time and on budget. A big accolade for their efficiency and prompt quality service  
”

Jonathan Schmidt

[www.qmk.com.au](http://www.qmk.com.au)

# Welcome to the Burenda Angus & Brangus Annual Clermont Bull Sale

A spectacular offering of 87 well grown good Angus & Brangus bulls will be offered for our tenth Annual Clermont Sale. The presentation of these bulls comprises of 49 2 year old Angus and 38 2 year old Brangus. Genetically these bulls represent some of Queensland's best bulls on offer with progeny by some of Australia's best AI sires together with several outstanding Burenda sires. A good number of the bulls from both breeds have excellent EBV's suitable for joining to heifers for calving ease whilst others possess the growth and carcass qualities we are all chasing. For your convenience we have shaded the EBV's of each sale lot in the top 10% blue and top 20% yellow. These bulls are bred in Queensland conditions and come with a full 2 year fertility guarantee which is detailed in the sale information pages in this catalogue.

We are currently running around 1000 registered Angus breeders, 250 Team Burenda Angus cows and 250 registered Brangus females. Over the last 15 years we have made good gains on fertility and progeny performance by being tough on fertility and temperament. Both of these traits are directly related to performance in the herd and there is no doubt the Burenda herd has benefited by the high standards we set ourselves for these two traits. The Burenda females are AI'd once and have only 6 - 8 weeks joining followed by pregnancy testing 40 days after bull removal. Empty females are removed from our programs. Fertility is crucial and this with adequate nutrition we believe plays a lot bigger part in the breeding philosophy and performance of a herd than we all would like to believe. The Burenda pregnancy testing rate this year was down a bit across all females at 90% which we feel is still very good as mother nature hasn't exactly been kind to them at joining time late last year. Particularly the bulk of the breeders which were running out at Glenmorgan and Surat.

We have again included the actual calving interval or ACI in our catalogue comments for those that use this information. Most lots have good ACI's of around 365 days. There are also others marked as Donor (AI ET), sold and 365/recipient. The recipient means his dam has had both natural and embryo calves. Around 80% of our females are 6 years and younger as we find these cows have the improvements of fertility, calving ease, growth, and carcass data that we are looking for. Our improvement in EBV's has been very noticeable in both our cows and the 2019 sale bulls. The combination of improvements in the fertility, EBV's, genomics and raw data performance within the Burenda herd has led to improved profitability through attention to these genetics. The Burenda females are run as if they were a commercial beef herd with around 8 months of the year spent on agistment country spread around the Darling Downs and Eastern Maranoa areas. The remainder of the time is spent at Dalby Downs for calving and the AI process.

Burenda has always used DNA verification where needed over the years and in the last 3 years all Angus progeny born have now been parent verified to a sire and a dam where possible and then had genomics incorporated into the EBV's. We have seen a slight improvement in our EBV's and a significant lift in the accuracy of these figures. Over the next few years we expect to see some good changes occurring in our breeding for better commercially focused carcass animals. Within 5 years we expect the entire Burenda female herd to have a DNA, genomics, and genetic defects profile. Unfortunately, this year's sale bulls have not all been tested for genetic defects in time for the printing of the catalogue but we will have the test results available closer to sale time. Recently I attended a SBTS genetics and EBV discussion group and it was interesting in that unless you use carrier bulls over carrier cows the likely hood of a defect calf is very slight and even then, is only a 25% chance of occurring. Our thoughts on this are that we have far more important influences that we can control in the breeding productivity of the average commercial herd such as a good vaccination program for Vibrio, Botulism, Tick Fever, 3 Day Sickness, Pestiguard, and

calf scours coupled with good nutrition. Any of these can cause a significant financial loss to a producer more so than the rare incidence of a genetically affected calf. In previous years we had two progeny that we felt could have had genetic defects at birth and yet on testing both progeny they were confirmed as congealed twins. We can make better productivity gains by focusing on more economically important elements of our businesses.

Burenda has been DNA testing the last 2 years drop of Brangus progeny for PV, poll, tenderness and genomics. At this stage the Brangus Society is building up its data base of genomics and it may be a couple of years before we see this incorporated into the EBV's. Hence, we are committed to the technology on the belief that in future years once this is done, we will be in a better position with accuracy and reliability on our EBV's. Our next drop of progeny will be tested for PV, Poll, tenderness, coat colour and genomics. Of the 38 Brangus bulls we are offering, 35 are homozygous polled with 3 heterozygous polled. It is our plan to have all homozygous polled Brangus within a few years.

Since our last sale Burenda sired Angus and Brangus progeny have excelled with wins at the Bell & Munduberra Shows. Tim and Megan Allan of "Argyle" Munduberra who took the time and effort to draft and cart 16 head into the local show for the commercial cattle section were well rewarded. Their exhibits of Angus and Angus x Charolais steers and heifers trumped the competition with a few wins and a close 2nd to the Champion Beast of the show with a two tooth Angus cross steer weighing in at 700kg. They also won the single two tooth bullock entry. They won the milk tooth best pen of 3 steers, the two tooth best pen of 3 steers and also the best pen of 3 heifers. The entries were all back grounded on "Argyle" from weaning on rye grass and clover pastures. It is amazing what a combination of good genetics, nutrition and sound management practices can achieve.

*Tim and Megan Allan "Argyle" Munduberra*

The Burenda Team took a truck load of Angus & Brangus weaner heifers, milk tooth heifers and fat cows for the Annual Bell Show and with their entries winning several classes. The females had only just recently come home from agistment at Glenmorgan so to win so many classes were very rewarding. Other highlights have been recent sales of Burenda Angus sired progeny with Peter J Holland of Roma selling a pen of 305kg Angus x Charbray weaner steers for 306.2c/kg to realise \$934. The Anderson Family from "Narrien" Clermont sold a good run of 413kg Angus x Braford steers for \$2.84 to realise \$1172/head. These steers were progeny from our Angus bulls selected for use over their Braford heifers for calving ease, short gestation, below average birthweight and good carcase qualities. Burenda has purchased a pen of 15 of these steers to enter into the Clermont Beef Expo Competition this year.

Manager Jonathan Schmidt has the bulls in great shape and they are doing well on the oats. There are photos of many of the bulls on our website. Please contact Jonathan on 07 4663 4002 or 0429 067 313 for any further details. Auctions Plus will be active again this year with Live Streaming attached for those unable to make the sale and who would like to see the bulls go through the ring. Our insistence on breeding for fertility, growth and carcase quality is paying dividends. We believe buyers will be impressed when they assess this year's draft. The 2 year old bulls will average over 850kg and have plenty of length, strength and fleshing ability. The catalogue includes 82 sires suitable for use on heifers. Please view full details of each bull on our website [www.burendaangus.com.au](http://www.burendaangus.com.au) and remember - you are always welcome at Burenda to check out our herd and operation.

# SALE INFORMATION

## Sale location and inspection times

The Burenda Angus & Brangus Bull Sale 2019 will be held at the Clermont saleyards. Sale time is 10:00am 3rd October 2019 and inspections can be made from early on sale day.

## Identification

All bulls have NLIS tags, lot numbers and freeze brands.  
The Burenda PIC number is QAWB0619  
All bulls are registered with the Angus Society of Australia

## Safety Rules & Recommendations

We are confident all our bulls offered for sale are quiet and of sound temperament and are used to being handled in yards. However sale day brings a differing set of conditions and the bulls are subjected to unusual levels of noise and pressure with many people invading their space. Even the quietest bull is still an unpredictable animal who can misbehave. Visitors entering pens do so at their own risk and are subject to conditions set out by the Roma Saleyards.

## Buyer Registration

A buyer registration system will apply. Please register with the selling agent well before the auction commences.  
AuctionsPlus will be running in conjunction with this sale and registration must be completed within the conditions set out by AuctionsPlus. For these terms and conditions please visit [www.auctionsplus.com.au](http://www.auctionsplus.com.au)

## Sale Conditions

All lots will be sold subject to the usual conditions governing auction sales which will be displayed on the day and are detailed in the back of this catalogue. The auction price is **exclusive of GST**

## Rebate

The vendor has agreed to allow 6% rebate to outside agents introducing the approved buyers no later than 24 hours prior to the sale, accompanying their buyer to the sale and settling on their behalf within 7 days of the sale. For outside agents introducing approved buyers within 24 hours prior to the sale **BUT NOT** attending the sale with their clients, a 3% rebate will be paid

## Delivery and Transport

Free transport and delivery to selected Major centres is available by negotiation with Burenda Manager Jonathan Schmidt after the sale has concluded.

## Genetic Defects

At the time of printing the catalogue Burenda had tested all bulls where necessary to clear or identify sale lots of these defects.

## Volume Discounts

Buyers of 2 or more bulls purchased at this year's sale will qualify for discounts as follows:

For 2 bulls purchased = 2% discount on total purchase price  
For 3 bulls purchased = 3% discount on total purchase price  
For 4 bulls purchased = 4% discount on total purchase price  
For 5 bulls purchased = 5% discount on total purchase price  
For 6 bulls purchased = 6% discount on total purchase price  
For 7 bulls purchased = 7% discount on total purchase price  
For 8 bulls purchased = 8% discount on total purchase price  
For 9 bulls purchased = 9% discount on total purchase price  
For 10 or more bulls purchased = 10% discount on total purchase price

## Health Treatments

All Burenda Angus Bulls presented at the sale have been treated for the following :  
7 in 1 vaccine, Vibrio vaccine, Pestiguard vaccine (ear notch tested free), Botulism vaccine, 3 Day Sickness, Tick fever blood and pre-treated for clearance into tick free area's.  
Burenda has a JBAS score of 7. Bulls are free to travel to WA & NT

## INSURANCE

Ownership passes at the fall of the hammer. Insurance can be arranged on the day through H & Wilkinson or your own agent

## Breeding Soundness & Semen Test

All bulls have been semen & morphology tested and passed satisfactorily for soundness by John Chapman of South East Qld Genetics. Full details will be available on sale day

## Raw Data

All bulls will be selling with full information on weights, scrotal measurements and ultrasound scanning details. Enquiries prior to the sale regarding raw data can be made by contacting Jonathan Schmidt on 0429 067 313 also raw data will be posted on our website prior to sale day at [www.burendaangus.com.au](http://www.burendaangus.com.au)

## Semen Interest In Bulls

Burenda will retain a half interest in any semen sold from bulls in this sale. Because Burenda sells most of their top bulls it is possible they may wish to collect semen at some future date for their own use or for sale. This is a revenue sharing opportunity for buyers. We retain the right to access bulls at a negotiated time and place and at Burenda's cost. Owners have the right to use their half share in their own herds or revenue share with Burenda in semen sold to other users.

## 2 Year Guarantee

In addition to the standard warranties provided in stud stock auction terms, Burenda is proud to provide a 2 year guarantee for all bulls sold at this sale. We warrant that the bulls are fertile and capable of natural service at the time of the sale. Should a bull become infertile or break down within 2 years for reasons other than injury or misadventure from 3rd October 2019 Burenda will:

1. Provide you with a satisfactory replacement  
OR

2. Provide you with a credit equal to the purchase price of the bull less salvage value and less seasonal value. This credit may be used at any future Burenda Bull Sale.

Burenda WILL require you to provide a veterinary report.

# IMPORTANT NOTICES FOR PURCHASERS

## SALE CATALOGUE DISCLAIMER

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder nor owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, neither the vendor, Angus Australia or the selling agents assume any responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

## PARENT VERIFICATION SUFFIXES

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name are as follows:

PV: both parents have been verified by DNA

SV: the sire has been verified by DNA

DV: the dam has been verified by DNA

#: DNA verification has not yet been conducted

E: DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

## PRIVACY INFORMATION

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

### **BUYERS OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO ANGUS AUSTRALIA**

*If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its database and disclosing that information to its members on its website.*

*I, the buyer of animals with the following idents .....  
.....  
..... from member .....(name) do not consent to Angus Australia using my name, address and phone number for the purposes of effecting a change of registration of the animals I have mentioned above that I have purchased, maintaining its database and disclosing that information to its members on its website.*

*Name: .....Signature: .....*

*Date: .....*

*Please forward this completed consent form to Angus Australia, 86 Glen Innes Road, Armidale NSW 2350.*

If you have any questions or queries regarding any of the above, please contact Angus Australia on (02) 6773 4600 or email [office@angusaustralia.com.au](mailto:office@angusaustralia.com.au)

## UNDERSTANDING ANGUS BREEDPLAN EBVs

### What is Angus BREEDPLAN?

Angus BREEDPLAN is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. Angus BREEDPLAN uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcass, fertility).

Angus BREEDPLAN includes pedigree, performance and genomic information from the Angus Australia and New Zealand Angus Association databases to evaluate the genetics of animals across Australia and New Zealand.

Angus BREEDPLAN analyses are conducted by the Agricultural Business Research Institute (ABRI), using software developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England. Ongoing BREEDPLAN research and development is supported by Meat and Livestock Australia.

### What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

### Using EBVs to Compare the Genetics of Two Animals

Angus BREEDPLAN EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcass than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

### Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals in Australia and New Zealand.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to:

- ◆ the breed average EBV
- ◆ the percentile table

The current breed average EBV and percentile table is provided in these explanatory notes.

### Considering Accuracy

An accuracy value is published in association with each EBV, which is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50- 74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

### Description of Angus BREEDPLAN EBVs

EBVs are calculated for a range of traits within Angus BREEDPLAN, covering calving ease, growth, fertility, maternal performance, carcass merit, feed efficiency and structural soundness. A description of each EBV included in this sale catalogue is provided on the following pages.

<b>BIRTH</b>			
<b>Calving Ease Direct</b>	(%)	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
<b>Calving Ease Daughters</b>	(%)	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
<b>Gestation Length</b>	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
<b>Birth Weight</b>	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
<b>GROWTH</b>			
<b>200 Day Growth</b>	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
<b>400 Day Weight</b>	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
<b>600 Day Weight</b>	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
<b>Mature Cow Weight</b>	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
<b>Milk</b>	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
<b>FERTILITY</b>			
<b>Days to Calving</b>	kg	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
<b>Scrotal Size</b>	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
<b>CARCASE</b>			
<b>Carcase Weight</b>	kg	Genetic differences between animals in hot standard carcass weight at 750 days of age.	Higher EBVs indicate heavier carcass weight.
<b>Eye Muscle Area</b>	cm <sup>2</sup>	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
<b>Rib Fat</b>	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
<b>Rump Fat</b>	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
<b>Retail Beef Yield</b>	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
<b>Intramuscular Fat</b>	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.

## FEED EFFICIENCY

<b>Net Feed Intake (Post Weaning)</b>	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a growing phase.	Lower EBVs indicate more feed efficiency.
<b>Net Feed Intake (Feedlot)</b>	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.

## TEMPERAMENT

<b>Docity</b>	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
---------------	---	---	--

## STRUCTURE

<b>Front Feet Angle</b>	%	Genetic differences between animals in desirable front feet angle (strength of pastern, depth of heel).	Higher EBVs indicate more desirable structure.
<b>Front Feet Claw Set</b>	%	Genetic differences between animals in desirable front feet claw set structure (shape and evenness of claw).	Higher EBVs indicate more desirable structure.
<b>Rear Feet Angle</b>	%	Genetic differences between animals in desirable rear feet angle (strength of pastern, depth of heel).	Higher EBVs indicate more desirable structure.
<b>Rear Leg Hind View</b>	%	Genetic differences between animals in desirable rear leg structure when viewed from behind.	Higher EBVs indicate more desirable structure.
<b>Rear Leg Side View</b>	%	Genetic differences between animals in desirable rear leg structure when viewed from the side.	Higher EBVs indicate more desirable structure.

## SELECTION INDEXES

<b>Angus Breeding Index</b>	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems.	Higher selection index values indicate greater profitability.
<b>Domestic Index</b>	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade.	Higher selection index values indicate greater profitability.
<b>Heavy Grain Index</b>	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 200 day feedlot finishing period for the grain fed high quality, highly marbled markets.	Higher selection index values indicate greater profitability.
<b>Heavy Grass Index</b>	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers.	Higher selection index values indicate greater profitability.

Emperor has over 7500 progeny and is the top selling son of Berkley for \$91000. His progeny stand out for muscle pattern and capacity, blending calving ease with high growth and carcass weight. The use of Emperor in the Burenda cow herd has produced thick meaty progeny with sire looks and exceptional doing ability. 2 Sons Lots 11 & 27.

Genesis has well over 1860 progeny recorded in a very short space of time due to the merit of his carcass traits. One of a few sires around with all EBV traits where we would like them. He has been easy to use over all cows. Seven traits that count in the top 1% are 200, 400 & 600 day growth, scrotal, carcass weight EMA & rib fat. Producing outstanding ABI, DOM, GRN & GRS index values all in the top 6%. 6 Sons Lots 7,13,14,33,34 & 45.

# Maximise the potential of your livestock with MegaMin

AgSolutions Australia are dedicated to helping all aspects of your operation from helping soil, helping plants, helping animals and helping people.

## Products and services available:

Livestock Supplements (including USDA/NOP Compliant Blends for the organic market), Feed Ration/Ingredient Testing, Feed Ration Formulations, Mineral Fertilisers and Soil Conditioners, Soil Testing, and Soil Management Programs.

## FREE Ration Formulation Service

### for all grain and grain assist diets!\*

Our nutrition team can review your current rations for early weaning, backgrounding, bulls, feedlot, dairy heifers, sheep and lambs.

\*Ration Formulation Service is only available to customers who purchase from the MegaMin Livestock Supplement Range.

“ We value the information and advice that Paul Pritchard from AgSolutions has provided in both paddock supplementation, feedlot rations and with soil improvement.

We place emphasis on the minerals in MegaMin to ensure that our stock have a constant plane of nutrition for consistent growth.

Jonathan Schmidt, Manager at Burenda Angus
