Directions: "Rosevale" is situated 20km east of Jandowae, Qld and 295km from Brisbane. 4200ft Airstrip on the property. (See map at back of catalogue for details)

INVITATION

Sam, David, Sonya, Seb and Toby

Welcome to our 63rd Annual Sale Catalogue and thank you for taking the time to read through it.

The last few years have been very satisfying for us at Rosevale with our cattle being in high demand. Thank you to all of you who return to purchase our cattle regularly. Your support is very much appreciated and we feel honoured that you consider our product to be worthy of use in your herd. Your support gives us the incentive to work hard to keep our herd at the forefront of progress in Australia's Beef Cattle industry.

On that note, work we have done on safeguarding our business to ensure that it is financially sustainable has us convinced that we need to keep to the basics of efficient beef production. The Stud cattle breeding sector has traditionally been guilty of being influenced by fads and fancies, generally taking time to turn the herd around after going too far on one particular track.

Focussing on the basics of efficient beef production means that we will not lose sight of the factors that make our herds profitable. Throughout this catalogue you will note our focus on herd fertility – the most vital component of long-term profitability in any beef cattle herd.

At Rosevale we have built up a databank of information on our cattle. This gives us the opportunity to make more precise genetic selection decisions than in the past. The goal posts are forever shifting, mainly by our choice, as we want our cattle to get better and better. Faster growth to a marketable weight, more muscle, more finish, higher all-round carcase quality, all while increasing herd fertility is our aim.

Keeping this measured genetic change in perspective is our insistence that our cattle are functional and manageable – this is where stock sense comes into play, where running an eye over each animal needs to override any figure on paper when necessary. But at the same time, being careful not to dismiss special animals that pass all tests nature throws at them and don't quite fit the type we 'think' is best.

Our search for superior animals is measured and is paying dividends, especially in years when the pressure is on. For

example, the past year has seen rainfall totals much lower than our historic average. We have been able to keep herd pregnancy levels high with little supplementation to our breeders. A big reason for achieving this has been genetics.

By aligning your herd with ours we believe you will receive the benefits of our selection toward profit-making cattle. Always backing up our decisions is our desire to breed cattle that will perform in harsher environments than ours. We hope that by providing the information on our sale bulls we are assisting you in selecting the best animals for your herd and business.

Looking back over the last decade of sale invitations it is interesting to note the number of times seasonal conditions have been mentioned – for the wrong reasons! I don't want to labour the point, except to say we wish everyone needing rain all the very best with that happening very soon.

The global demand for beef is high and looks like staying there. A change to better seasons will enable us all to take full advantage of this demand.

Again this year, for the benefit of those who cannot attend the sale, the Rosevale Sale will be **livestreamed and online bidding will be available through Auctions Plus**. Please see the following page for details.

If you have any questions regarding our cattle or would like to view the sale bulls prior to sale day, please don't hesitate to contact us. Alternatively, if we can help with your selections you might like to consider filling out and sending through the questionnaire on Page 78. We want you to get the bulls that best suit your operation and are only too happy to help.

We look forward to seeing you at our 63rd Annual Sale.

Kind Regards
David Greenup

Grahame & Peggy

SALE LIVESTREAMED ON AUCTIONS PLUS

***Can't make the sale?
Log onto AuctionsPlus to bid from
anywhere on your phone, tablet or desktop.***

1

REGISTER ONLINE

Simply click 'Sign Up' to begin your free registration. To register as a buyer for livestock, you will need to provide us with a few more details.

2

COMPLETE BUYER INDUCTION

The buyer induction will help you understand the roles and responsibilities of everyone on the AuctionsPlus system.

3

VIEW CATALOGUE

Photos, videos, pedigrees and other information will be available in the online catalogue.

4

ENTER AUCTION

Log into the auction anytime, anywhere and bid on your mobile, tablet or computer.

5

AUTO BID

Can't stay for the whole sale? Set your maximum bid on the lot that you want to purchase and let the computer bid for you.

6

CONTACT SELLING AGENT

If successful, contact selling agent directly after the sale to arrange payment.

7

DELIVERY

Arrange transport of livestock at your expense.

*Contact AuctionsPlus on (02) 9262 4222
or www.auctionsplus.com.au*

SALE INFORMATION

Sale Bull Preparation:

Our policy at Rosevale is to grow our sale bulls on pasture and finish them on forage crops, whenever possible.

This year we have struggled to grow and finish our bulls in this way. With only 110mm of rainfall recorded in the last eight months at Rosevale, our summer crop did not yield like usual and our winter oats crop has all but grown to nothing. In fact, on 1,500 acres of oats we have run 38 bulls for the last three weeks!

We are mindful that we need to have our annual sale bulls growing at around 1kg/day.

In order to achieve this level this year the sale team has been supplementary fed for extended periods while grazing green panic pastures. With the use of Universal feeders and modifications to traditional style feeders, we continue to run our bulls in large pasture paddocks and are able to retrain them to gaining 1kg/day. This is a similarly steady gain to what is expected on good quality pasture and is our aim because we do not want to compromise the future soundness and fertility of the bulls.

Being in larger paddocks ensures that the bulls forage and remain fit. It also gives them room to get away from each other, especially in the case when they are run in large mobs.

We thank Will Robinson from PPS Beef for his assistance in sourcing appropriate supplementary feed for our herd.

Breeding Soundness:

All sale bulls will be breeding soundness evaluated by veterinarians from Knox Veterinary, Dalby. This evaluation involves an examination of the internal and external reproductive organs of each bull.

Semen morphology testing has been carried out by Dr Kim Kelly of Kelly Ag Morphology Services. See the note on the following page.

Scrotal circumferences will be measured using a Coulter Scrotal Tape.

Relevant information following this evaluation will be available prior to sale day.

Guarantee:

All bulls sold are guaranteed fertile. If there are any issues with your purchases please do not hesitate to

call us. We want the bulls to work just as much as you do and are more than happy to work with you toward an acceptable resolution if there is a concern.

Health/Vaccinations:

The Rosevale herd has a current BJD status of J-BAS-7. The herd is tested free of BJD - cattle are eligible for entry into WA.

The Rosevale herd is accredited TB and Brucellosis free.

All bulls will receive Three-Day Sickness, Vibrio and 7-in-1 vaccinations prior to the sale.

All bulls have been vaccinated (as weaners) for Tick Fever with Three-Germ Blood.

Vaccination dates will be available on sale day.

Inspection:

Sale stock will be yarded for inspection from 8am on the morning of the sale. The cattle may be inspected at any time prior to the sale by arrangement with the Greenup Family.

Supplementary Information:

Supplementary sheets available on sale day will include sale weights, average daily liveweight gains, scrotal circumferences and semen morphology results.

Sale supplementary sheets will be available on our website at www.rosevalesanta.com.au from the Saturday prior to the sale. If you would like this information emailed to you please contact the Greenup Family and leave your contact details so that we can forward this to you.

Outside Agents Rebate:

The vendors agree to pay a 3% rebate to outside agents who:

1. Introduce buyers in writing to the Greenup Family or the operating agents at least 24 hours prior to the sale; and
2. Pay invoices in full by 5.00pm on Friday October 4, 2019.

Rebate WILL NOT be allowed outside these conditions.

Delivery:

We take personal interest in the efficient and safe delivery of all lots after the sale. All lots not loaded on sale day go back into their paddocks in the mob they have been running with. Sale agents have the responsibility of organising transport and will endeavour to group lots together in loads to make delivery as economical as possible.

SEMEN MORPHOLOGY

Dr Kim Kelly is a certified member of the University of Queensland Sperm Morphology Standardisation Program (UQSMSP). This program assesses the level of agreement between the participants and the UQSMSP (a statistically defined standard) on a yearly basis by regular testing and comparison of standard samples and the attendance at regular workshops. The purpose of this voluntary program is to identify morphologists determined to reduce variation of results due to disparities in recognition and classification of sperm abnormalities.

Assessing sperm morphology requires examination of a sperm sample using a highly specialised and powerful microscope in a laboratory. Using a preserved semen sample, this test cannot be performed crush side, unlike the examination of a fresh sample for forward motility.

Morphology of the sperm cell is now recognised as the most important measure of fertility in a bull. Results of the Bull Power Project showed that percent normal sperm of the bull was the measurement most highly correlated with calf output. In this project involving tropical breed bulls in northern Australia, bulls with high percent normal sperm measurements were most likely to sire high percentages of the calf crop.

In addition to proving an individual bull's ability to be fertile, further research is showing that percent normal sperm in a bull is correlated with the future reproductive performance of both his male and female progeny. To ensure maximum genetic progress in a herd, individual measurements need to be included in a genetic analysis where all factors of herd fertility are considered.

Selection of sires at given levels of percent normal sperm morphology will result in:

1. determination of the potential fertility of a bull, and
2. the potential to influence other fertility traits within a herd

Given the importance of herd fertility the University of Queensland Sperm Morphology Standardisation Program aims at ensuring an accepted and trusted industry standard for the measurement of Sperm Morphology. In making selection decisions, beef producers can have confidence in the results provided by morphologists certified as members of this program. As part of the complete Bull Breeding Soundness examination, test results can only apply to the date of the examination.

SIRE

ROSEVALE JACKAROO J566 (P)

Rosevale Jackaroo J566(P) has established himself as a leading sire in our herd. He has a presence that has 'Sire Power' written all over it. The natural balance and eye-appeal of his progeny are features and combined with powerful performance, make them standouts in their mobs. The structural and reproductive soundness they possess means that they stand a good chance of living long, productive lives.

Jackaroo's Fat EBVs rank him in the top one percent of the breed for finishing ability. This is a trait we very much want to retain in our herd for a number of reasons - for cow breeding longevity, ease of finishing carcasses off in a range of conditions, and the eye appeal and healthy look that these types of cattle display (whatever the season) when selling them as feeders. In addition, his IMF EBV ranks him in the top one percent of the breed.

Twenty of his sons have sold at auction to average \$18,575. They include Ned Kelly N28(P) for \$47,500 to the Greenup Stud, Monty M482(PP) for \$42,000 to the Biara Stud and Moses M184(P) for \$40,000 to S.Kidman & Co.

Represented by Lots 11, 12, 33, 78, 96, 101, 122 & 126.

SIRE

ROSEVALE JETHRO J208 (PS)

Rosevale Jethro J208(PS) stands alongside Jackaroo as a leading sire in our herd. His breeding consistency is a feature with his calf crops having a low cull rate. His fertility EBVs are breed leading and his Export \$Index at +\$58 ranks him fourth on the list of sires in the breed - a reflection of his prepotency and performance across all traits.

This balanced, high performance, combined with his reproductive and structural soundness means that he will match almost any cow he is mated to.

The extra finishing ability he displays, which is highlighted in his Fat EBVs, is typical of the Brahman base he is bred up from. His dam, who was a third-cross, grade-up cow had four sons sell to average \$10,000.

The Jethro sons are a little unlike traditional types but check their performance - they are real money making sires. 36 of his sons have sold at auction to date to average \$10,625. The highest seller has been Moonshine M408(P) who sold to S.Kidman & Co for \$30,000.

Represented by Lots 5, 48, 57, 81 & 109.

SIRE

ROSEVALE EMPIRE E464

Rosevale Empire E464 has been a leading sire at Rosevale for many years producing slick coated, high performance progeny that are both structurally and reproductively sound. His progeny have a high classification rate which is a result of the performance and soundness that is evident in his calves. At eleven years of age he is as sound as a bell and stands out in our mob of sires.

He is currently one of the top ranked Santa Gertrudis sires for Export \$Index while his dam is currently ranked as the third animal in the breed for this \$Index.

Empire is our Fertility King. Although he is horned, the fertility record of both he and his progeny, make him an integral part of our sire battery. He is an extremely fast calf-getter, his daughters are breeding well as is shown by his Days to Calving EBV, and his sons typically average close to 90% Normal in semen morphology tests, resulting in his Percent Normal Sperm EBV sitting at +12.1%.

58 of his sons have sold to a top of \$18,000 (Empire K40(P) to the Brigodoo Stud and McEnroe M454(P) to the Fishington Stud) to average \$7,913.

Represented by Lots 27, 56, 95, 98, 100, 102, 108 & 129.

SIRE

KULOOMBA PETER (P)

Kuloomba Peter 444(P) is an exciting new sire who is unrelated to any of our cattle so offers outcross genetics to our herd. He was bred by Robert and Julie Vise from Victoria and purchased at the Tamworth Breeders Sale for \$57,000.

His raw performance, natural balance and sire appeal gave us confidence in his breeding potential. He weighed over 1,000kg as a two-year-old and displayed superior carcase characteristics. He is built on a super thick, long bodied frame. His extra muscle expression is a feature and he combines this with a high degree of finish - traits that often don't come in one package.

He is leaving his mark on his progeny and there is a definite quality to them. His Breedplan EBVs are settling in but it is early days for his fertility data, especially Days to Calving. This will take some time to be accurate as the first data to Breedplan will be after his daughters calve in the upcoming season. They have pregnancy tested well as yearlings.

Represented by Lots 4, 9, 13, 23, 30, 36, 93, 106 & 127.

SANTA GERTRUIDS GROUP BREEDPLAN	200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	SS	% Norm Sperm	D to C	EMA	Rib Fat	Rump Fat	IMF	Flight Time	\$ Index Value

SIRE

WIGHTFIELDS DOWNPOUR G21 (P)

Wightfields Downpour G21(P) has been a powerful sire in our herd for a number of years now. Balanced, high performance across the traits which is led by growth and muscle expression, results in Downpour's high \$Indexes which rank him in the top one percent of the breed.

His daughters are breeding well, as is shown by his negative Days to Calving EBV. While his progeny excel for muscle content, they are easy doing cattle that fatten easily - a combination of carcase traits we aim to breed in all our cattle. It is hard to find a sire that will deliver extra muscle expression, but at the same time, high female fertility.

50 of his sons have sold at our annual sales to average \$11,630. These include King K88 who sold to the Cree Stud for \$70,000 (Rosevale record), Downpour L238 who topped our sale in 2016 selling to the Swan Hill Stud for \$40,000, Manchester M448(PP) who sold to the Dangarfield Stud for \$29,000, and Ludlow L548 who sold for \$28,000 to the Micheltmore Family.

Represented by Lots 3, 21, 38, 55, 80, 131 & 132.

SANTA GERTRUIDS GROUP BREEDPLAN	200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	SS	% Norm Sperm	D to C	EMA	Rib Fat	Rump Fat	IMF	Flight Time	\$ Index Value

SIRE

STRATHMORE KEVLAR K674 (P)

Strathmore Kevlar K674(P), sired by Warena Regret, was purchased for the top price of \$28,000 at the 2015 Strathmore Sale. He was to be retained as a sire in the Strathmore Stud and was a late inclusion in the sale. His solid raw performance, balance and sire appeal impressed us.

As his current Breedplan EBVs suggest, his progeny are growthy, quiet and measure high for eye muscle area. His Days to Calving EBV is a work in progress as very little data on his daughters has been processed at this stage and his ancestors are not highly recorded.

All of his calves have been polled so, although not tested, we are almost certain that he is homozygous polled. He offers outcross genetics to our herd.

Six of his sons sold at last year's sale to average \$13,833 - topping at \$43,000 for Kevlar N280(PP) to the Cree Stud.

Represented by Lots 2, 16, 25, 89, 92 & 97.

SANTA GERTRUIDS GROUP BREEDPLAN	200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	SS	% Norm Sperm	D to C	EMA	Rib Fat	Rump Fat	IMF	Flight Time	\$ Index Value

SIRE

ROSEVALE MAVERICK M102 (P)

Rosevale Maverick M102(P) is a young gun who we have used heavily in the herd already. He is out of Empire's dam and sired by Jethro so pulls together some special genetics into one package.

He is a super-efficient type with a perfect sheath, is quiet natured, thick and meaty, has a slick coat type, and returned a semen morphology result of 95% Normal at 20 months of age.

He is moderate in maturity pattern so we think he is the type of animal whose progeny will remain productive in almost all environmental conditions, and will have the ability to meet the requirements of a wide range of markets.

His performance data is unique - high milk, enough growth, early sexual maturity, extremely high female fertility, enough muscle, plenty of finish, high intra-muscular fat, quiet temperament - all in one package!

Represented by Lots 42, 47, 86, 110, 134 & 136.

	200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	SS	% Norm Sperm	D to C	EMA	Rib Fat	Rump Fat	IMF	Flight Time	\$ Index Value

SIRE

ROSEVALE MAJOR L520 (P)

Rosevale Major L520(P) is a combination of two of the breed's leading animals - by the proven sire Wave Hill Major(P) out of Rosevale Jade D175 (the dam of the \$70,000 Rosevale King K88 who is a dominant sire in the Cree Stud). The proven performance of his parents gave us confidence that Major L520(P) would breed consistently and we haven't been let down.

He is all power. Growth and muscle in combination with good fertility currently has him ranked fifth in the breed on the list of sires for Export \$Index, alongside his sibling King.

We now have a number of sires in use in the stud that offer high performance across all traits. This gives us flexibility when considering mating options in the herd and is resulting in fast genetic change.

Represented by Lots 20, 112, 135, 137 & 138.

	200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	SS	% Norm Sperm	D to C	EMA	Rib Fat	Rump Fat	IMF	Flight Time	\$ Index Value

SIRE

ROSEVALE LACOSTE L252

Rosevale Lacoste L252 is an exciting young sire who offers interesting genetics to our herd.

He is sired by Empire and out of an old cow who reared ten calves in ten years. His granddams on both sides of his pedigree have similar fertility records. When you stack high fertility right throughout a pedigree and combine this with high semen morphology results, you have an animal that should breed true to form and is a powerful breeding tool.

In addition, Lacoste has more muscle expression and shape to him than his sire which makes his calves more eye-appealing.

He completed four matings in two years in the GRP and Rosevale Studs so has not had much rest. His calves are very popular with our clients who are focusing on profitability. Many are selling in our private sale mobs.

Represented by Lots 10, 70, 90, 104, 105, 111 & 133.

	200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	SS	% Norm Sperm	D to C	EMA	Rib Fat	Rump Fat	IMF	Flight Time	\$ Index Value

SIRE

ROSEVALE ATOMIC F120 (P)

Rosevale Atomic F120(P) is a son of Rowanlea Atomic(P). He sold last year at nine years of age so this will be the last offering of his sons.

His progeny exhibit the typical early maturity of the Atomic line. They stand out as weaners but are deceptively heavy later in life while not being tall in frame. They are slick, dark coated cattle with extra thickness. The consistency of his progeny is a feature - they can be easily recognised in a mob.

30 of his sons have sold at auction to average \$8,533. These include Kokomo K68(P) who sold for \$20,000 to the Wightfields Stud and Atomic L104(P) who sold to the Glen Rufus Park Stud for \$15,500.

Represented by Lots 1, 7, 26, 37 & 51.

SANTA GERTRUIDS GROUP BREEDPLAN	200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	SS	% Norm Sperm	D to C	EMA	Rib Fat	Rump Fat	IMF	Flight Time	\$ Index Value

SIRE

GYRANDA JOKER J156 (P)

Gyranda Joker J156(P) was purchased at the 2014 Gyranda Sale. He offers outcross genetics for our herd. On the female side, his dam calved first as a two-year-old and had ten calves in ten years. This is the sort of fertility data we prefer in potential sires we retain and source, believing that it is a solid platform to grow a herd of cattle around. This fertility is backed up by Joker's Days to Calving EBV which ranks him in the top 15% of the breed for female fertility. In addition, his EMA EBV has him ranked in the top 5% of the breed. This is a combination of traits that is rare.

Joker was masculine headed, early maturing, easy doing and had a tidy sheath with a slick, tropical coat type. His highest selling son to date is Nostradamus N38 who sold for \$22,000 to the Rowanlea Stud. Four of his sons sold last year to average \$12,250. This will be his last progeny to sell.

Represented by Lots 8, 15, 29, 31 & 94.

SIRE

ROSEVALE JUSTICE J450 (PS)

Rosevale Justice J450(PS) was retained to carry on the Wightfields Crackerjack C75(PS) sireline. He is long bodied with more scale than his sire.

His dam was from one of our most fertile breeding lines, being by Rosevale Beaumon X71. She pulled up breeding after rearing fifteen calves in fifteen years, her first as a two-year-old.

Justice has moved between our stud and commercial herds. His next drop are born out of commercial cows.

Represented by Lots 18, 19, 41 & 99.

SIRE

ROSEVALE MAJESTIC M176 (P)

Rosevale Majestic M176(P) was our choice of the first drop of Jackaroo sons and is out of a large framed, Wightfields Crackerjack C75(PS) daughter. His performance data is certainly not as balanced as that of Maverick but he is an important addition to our sire battery due to the power he offers. Extreme growth with early sexual maturity, extra muscle with extreme finishing ability and a breed leading Flight Time EBV are features.

In addition, he is very eye appealing - he looks like a sire. He was judged Grand Champion Bull at the 2017 National Junior Show. Since then he has been put to work. He is the sire of one bull in this sale - he was mated to a limited number of heifers as a yearling after returning from the Junior Show. He has a large number of calves in the weaner mob. They are exciting - extremely growthy and all quality. We are looking forward to next year.

Represented by Lot 50.

SIRE

ROSEVALE HANOVER H402 (PS)

Rosevale Hanover H402(PS) was a Ulysses son out of a Quilpie W308 blood cow. The hit of W308 blood gave Hanover higher growth than his sire. Reproductively, Hanover's sheath was perfect. Structurally he was very sound with good mobility. He was an easy doing bull and his coat type was particularly good. It is the eye-appeal and natural balance of his progeny that make them stand out in their mob. In our private sale bull mobs each year they have been some of the first to sell.

The soundness and resulting longevity that the Hanover sons possess is not measured directly but is invaluable in regards to driving herd profitability. 22 of his sons have sold at auction to date to average \$8,181. His top priced son, Montana M512(PP), sold for \$15,000 to the Kirkwood Family.

This is the last of his sons to sell.

Represented by Lots 14, 32, 39, 49, & 107.

SIRE

ROSEVALE LANCELOT L40 (P)

Rosevale Lancelot L40(P) is a son of Hanover H402(PS) out of a Raytek Democrat(PP) daughter. She has had five calves in five years and is PTIC.

He was retained as a sire for one season before selling as a three-year-old for \$11,000 to Wade & Natalie Clarke.

Lancelot is a soft coated, easy doing bull with a perfect sheath. He tested well in semen morphology tests (84% Normal two years in a row) - a prerequisite for being retained as a sire at Rosevale.

Represented by Lots 22, 24, 40, 44 & 45.

	200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	SS	% Norm Sperm	D to C	EMA	Rib Fat	Rump Fat	IMF	Flight Time	\$ Index Value

SIRE

GYRANDA KUNG FU K146 (PS)

Gyranda Kung Fu K146(PS) was purchased as the top priced bull at the 2015 Gyranda Sale.

He is an easy doing, polled bull with adequate growth, is very sound in his feet and legs and was purchased with a very high %Normal semen morphology test result.

His stand-out feature is his fertility data. Out of a cow who has had eleven calves straight and by Rowanlea Duntroon D24(PS) who possesses a breed-leading Days to Calving EBV, we expect Kung Fu to breed a strong maternal line of particularly fertile females who will form a solid base for the next generation of high performance Rosevale sires.

His first sons sold last year to a top of \$12,000 for Nanango N538(P) to the Drensmaine Stud.

Represented by Lots 34 & 46.

SIRE

ROSEVALE KILLJOY L282 (P)

Rosevale Killjoy L282(P) is retained as a mating sire for yearling heifers. He was born out of an Atomic-bred heifer and sired by a Killjoy son used specifically for that purpose.

His performance data is solid with very good fertility EBVs being his strong point. His dam (five calves and PTIC) and granddam (nine calves in nine years) have been particularly fertile. L282 tests at a high level each year in semen morphology tests and this is reflected in his positive Percent Normal Sperm EBV.

His growth is a bit below average but he gives us a live calf, and mated to our higher performing heifers, many of his calves perform better than himself.

Represented by Lots 6, 35 & 43.

	200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	SS	% Norm Sperm	D to C	EMA	Rib Fat	Rump Fat	IMF	Flight Time	\$ Index Value

SIRE

ROSEVALE HARLEQUIN L290 (PP)

Rosevale Harlequin L290 (PP) is a homozygous polled bull who has been used as a sire in our commercial herd.

He is bred from a very fertile female line - his dam calved first as a two-year-old and had ten calves in ten years. She only stopped breeding because we retired her. This record resulted in her achieving a Days to Calving EBV of -14.3 days, ranking her in the top one percent of the breed for female fertility. Harlequin L290's sons in this sale were born out of two-year-old heifers, following a yearling mating. L290's progeny are particularly thick set. For this reason, we do not recommend them for mating to yearling heifers.

Extra length of body and muscle expression, trims sheaths and quiet natures are features of his progeny. His polledness is also particularly strong with many testing as homozygous.

Represented by Lots 60, 62, 82, 83, 87 & 88.

	200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	SS	% Norm Sperm	D to C	EMA	Rib Fat	Rump Fat	IMF	Flight Time	\$ Index Value

FUTURE SIRE

ROSEVALE MOSES M184 (P)

Rosevale Moses M184 (P) is a son of Jackaroo J566(P) who was retained as a sire for one season. He sold as a three-year-old last year for \$40,000 to S.Kidman & Co's bull breeding herd.

His granddam is one of our very best breeders and is the dam of Murdock M114(PS) who features below. It is strength of pedigree like this that we search for when selecting sires to retain. There is no doubt such cattle breed with greater consistency.

Moses has an ideal balance of performance, is quiet natured and functional in every way. He was mated to both commercial heifers and stud cows and the resulting calves are now weaners. They will be a very sellable cattle - mirroring the performance data of their sire and displaying the eye-appeal, typical of the Jackaroo line of cattle.

His first sons will sell in 2020.

	200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	SS	% Norm Sperm	D to C	EMA	Rib Fat	Rump Fat	IMF	Flight Time	\$ Index Value

FUTURE SIRE

ROSEVALE MURDOCK M114 (PS)

Rosevale Murdock M114 (PS) is a polled son of our 'Fertility King' Empire E464, out of one of our very best cows.

His dam calved first as a two-year-old, has had eight natural calves in eight years, and is PTIC. She is also the donor dam of ten calves born via IVF. A full brother to Murdock has also been retained as a sire while seven IVF weaner calves by Cree Ferrero(PS) look very interesting.

Murdock M114 combines high growth with superior fertility EBVs. The Empire line is interesting in that their fertility performance is high despite being leaner cattle with low fat measurements. They break the common rule that 'fat' is needed for high fertility. Don't let this worry you - if they get the job done they get the job done! Murdock is among a group of our elite young sires who currently rank near to the top of the breed for profitability.

His first sons will sell in 2020.

	200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	SS	% Norm Sperm	D to C	EMA	Rib Fat	Rump Fat	IMF	Flight Time	\$ Index Value

FUTURE SIRE

ROSEVALE MENINGA M124 (PS)

Rosevale Meninga M124(PS) is an Empire grandson who sold in 2017 for \$18,000 to the Glen Rufus Park Stud. Because the mating season is different in South Australia we were fortunate enough to use Meninga as a sire for our mating before he made the journey to join the GRP herd.

His sire Hastings is the highest ranking sire in the breed for Days to Calving with an EBV of -24 days. On the other side of his pedigree his dam calved first as a two-year-old and had nine calves in nine years.

An added feature of Meninga is his extra growth - he weighed 900kg at 23 months of age when sold. With this in mind we believe his growth EBVs could head north once more data is recorded on his progeny.

His first sons sell in 2020.

	200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	SS	% Norm Sperm	D to C	EMA	Rib Fat	Rump Fat	IMF	Flight Time	\$ Index Value

FUTURE SIRE

ROSEVALE NAUTICAL N20 (PP)

Rosevale Nautical N20(PP) sold at last year's sale as Lot 1 for \$34,000 to the Biara Stud. Before travelling to WA Nautical was mated to heifers at Rosevale.

One stand-out characteristic that both the Haselbys and we have observed is Nautical's terrific doing ability. This is no surprise when you consider he inherited high fat genetics from both sides of his pedigree. In addition to this he is sound and functional and quiet natured, similar to the progeny of his sire Jackaroo J566(P).

Being homozygous polled is a real plus, speeding up our move towards breeding more polled cattle.

We look forward to his first calves being born in the Spring.

FUTURE SIRE

GYRANDA NEWTON N202 (PP)

Gyranda Newton N202(PP) was purchased in partnership with the Biara Stud at the 2018 Gyranda Sale for \$12,000.

He is sired by Wightfields Downpour G21(P). His dam calved first as a two-year-old and has had eight calves in eight years at a calving interval of less than 365 days.

Despite being by one of our current sires, it was this fertility background in combination with his 96% Normal semen morphology result that made him a bull we needed to consider purchasing. He is interesting in that he is very alert and active but placid in nature. His combination of high muscle and positive fats is a feature and being homozygous polled is a bonus.

We look forward to his first calves being born in the Spring.

HOW TO READ THE CATALOGUE

Included in this year's catalogue are two main types of data:

1. Rosevale Adjusted Measurements

The following abbreviations are used:

200D Wgt Rk	=	Rank in group, weaning weight adjusted to 200 days (e.g. 5/100 means the bull was the 5th heaviest out of 100 bulls in his group)
400D Wgt Rk	=	Rank in group, yearling weight adjusted to 400 days
600D Wgt Rk	=	Rank in group, weight adjusted to 600 days
400D SS	=	Yearling scrotal size adjusted to 400 days
450D EMA	=	Yearling eye muscle area adjusted to 450 days
450D RbFat	=	Yearling rib fat depth adjusted to 450 days
450D RpFat	=	Yearling rump fat depth adjusted to 450 days
IMF%	=	Intra-muscular fat percentage as yearling
Flight Time	=	Measured time over short distance leaving crush at 400 Days
NA	=	Not available because this trait was not measured

We have adjusted the above measurements to common ages for two reasons. Firstly, it makes it possible to easily compare the measurements of cattle of different ages. Secondly, it gives buyers the opportunity to compare bulls without EBVs with those that do have EBVs.

For animals that have both adjusted measurements and Breedplan EBVs, we believe that more emphasis should be placed on the use of the latter. This is because Breedplan EBVs help account for environmental differences, performance of relatives, and individual performance in correlated traits, whereas adjusted measurements do not.

2. Santa Gertrudis Group Breedplan EBVs:

These figures are displayed in the table that includes the Santa Gertrudis Group Breedplan logo. The figures in the first line are EBVs. The percentages in the second line are accuracies - they give an indication of the amount and quality of data that is accounted for in the EBV.

The following abbreviations are used:

200D Milk	=	200 Day Milk
200D Wgt	=	200 Day Growth
400D Wgt	=	400 Day Weight
600D Wgt	=	600 Day Weight
Mat Wgt	=	Mature Weight
SS	=	Scrotal Size
% Norm Sperm	=	Percent Normal Sperm
D to C	=	Days to Calving
EMA	=	Eye Muscle Area
IMF	=	Intra-Muscular Fat

In the Dam's History on each Lot, the following abbreviations are used:

PTIC	=	Pregnancy Tested In Calf
PTE	=	Pregnancy Tested Empty

HORN/POLL TEST

All bulls with the possibility of being homozygous polled (PP) have been Horn/Poll tested through Zoetis.

31 bulls catalogued in the sale have tested as homozygous polled (PP) which means that they possess two copies of the poll variant of the gene. This means that these bulls are highly likely to pass a poll variant to their progeny. In short, **all of their progeny should be polled.**

The following lots are homozygous polled (PP):

3, 4, 5, 15, 16, 18, 33, 37, 43, 51, 52, 53, 60, 61, 64, 71, 72, 74, 77, 82, 83, 87, 88, 93, 103, 119, 132, 134, 138, 139 & 143.

BIG RED SANTA WEEK

The 63rd Annual Rosevale Sale forms part of a series of three Santa Gertrudis bull Sales. Dubbed the “**BIG RED SANTA WEEK**”, 300 bulls will be offered over a three day period.

We look forward to welcoming visitors to the three days of sales which offers prospective buyers the opportunity to view a large number of bulls in a short period, confident of obtaining the bulls they need without the extra costs associated with attending sales that don't follow each other.

Also, the fact that these sales will be held late in September means that the bulls are being offered closer to the time when most producers need them.

SALES INVOLVED IN THE BIG RED SANTA WEEK

Mon Sept 23rd - **Wandoan SG Bull Sale, Wandoan**
Tues Sept 24th - **Rosevale, Jandowae**
Wed Sept 25th - **Dangarfield, Taroom**

ROSEVALE MARGOT G441 (P)

ROSEVALE MARGOT C297 (P)

Margot G441(P) has had six calves in six years and is PTIC. All five eligible have classified S. These include Downpour K20(P) who sold for \$5,000 to South Westgrove Cattle Co and Harlequin L586(P) who sold for \$7,000 to Wes and Olivia Clifford. Her last calf is a weaner heifer by Majestic.

Margot C297(P) calved first as a two-year-old and had eight calves in eight

years before being PTE and sold. Four of these classified S and include Bullion K136(PS) who sold for \$4,500 to Curra Park Cattle.

Orlando P438(P) is a dark, easy doing, early maturing, polled bull. These characteristics are typical of the Atomic line and he is backed by a fertile female line. High female fertility is something we pride ourselves on at Rosevale.

WACO SCRIBE (PS)

ROSEVALE SKYE G419 (PS)

ROSEVALE SKYE A127

Skye G419(PS) gave birth to a set of twins as a two-year-old, has now had eight calves in seven years and is PTIC. These include Mackelmore M548(PS) who sold to the Kirkwood Family for \$8,500 in 2017. Her last calf is a weaner bull.

Pocock P80(P) is built very much like his namesake. With an EMA EBV of +6.2cm² and 600 Day Growth EBV of +50kg he is ranked in the top one percent of the breed for these traits. His quiet nature is backed up by a slow flight time and resulting positive EBV. Added to this, his positive Percent Normal Sperm EBV provides confidence that Pocock will be a high impact sire in the herd he goes into.

ROSEVALE EMPIRE E464

ROSEVALE MAXINE J119 (P)

ROSEVALE MAXINE E57 (P)

Maxine J119(P) had three calves in three years before being PTE. She was remated and sold PTIC to the Franz Family. Two of these classified S while a herd bull son sold to Mark & Robyn Ferling. **Maxine E57(P)** calved first as a two-year-old, has had ten natural calves in nine years (including a set of twins), and is PTIC. In addition she is donor dam to fourteen calves conceived via IVF. Nine of these are weaners. Eight classified S

progeny include Empire K54(PS) who sold for \$14,500 to the Vanderhave Family, and sons sold to the O'liffe Family and Kokopelli Cattle Co. Herd bull sons sold to Hugh & Ros Campbell and to Paraway Past Co.

Pancho P360(PP) is a homozygous polled bull with definite sire appeal. His balance of performance ensures that he will be a versatile mating sire in any breeding program.

ROSEVALE MAXINE K251 (P)

ROSEVALE MAXINE Y142 (P)

Maxine K251(P) calved first as a two-year-old, has had four calves in four years, and is PTIC. These include a herd bull son sold to John & Jane McLaughlin and a Peter son that is one of our top weaners.

Maxine Y142(P) calved first as a two-year-old and had sixteen calves in sixteen breeding seasons. She had one year out of production as a donor dam in an ET program where she produced a further six calves. Twelve classified S progeny

included Qulipie Z118(P) who sold to the Biara Stud for \$10,000 and Noddy D216(P) who sold to the Yulgilbar Stud for \$18,000. Three other sons sold for breeding.

Oodnadatta P560(P) is a typical Atomic type, with more power. Dark in colour, he is thick, deep and long - dimensions that make him weigh heavy. Balanced performance here.

ROSEVALE BULLS PREPARED FOR A LONG WORKING LIFE

Because we have an on-property sale at Rosevale we have the luxury of our bulls not being compared with those of other vendors. For this reason, we do not aim at a certain weight that our bulls must be at sale time. More importantly, we plan to offer a run of bulls that are well grown without being 'overdone'.

Seasonal conditions throughout the bulls' lives have a large bearing on sale weights.

Our aim is to offer bulls that are fit and healthy, backed by Breedplan EBVs that describe their genetics.

Our regular clients know not to compare the weight and scan measurements that our bulls exhibit to those of bulls in other sales where sale preparation is totally different.

On sale day they compare the daily weight gains of the bulls to give reassurance of a bull's individual performance within his management group.

More and more buyers are gaining confidence in using Breedplan EBVs for the different traits to compare between herds - knowing that the information on Rosevale bulls is from a herd that is both fully and accurately recorded.

COMPLETENESS OF RECORDING 4^{1/2} STAR

The “Completeness of Performance” herd rating system assesses the quantity of pedigree and performance information that has been submitted to Breedplan by an individual seedstock herd.

The 1 to 5 scale of star rating is calculated based on the proportion of calves and numbers of performance traits recorded.

The Rosevale herd consistently records a Completeness of Performance rating of 4^{1/2} Stars which ranks the herd right up with the most comprehensively recorded herds in northern Australia.

HOW DO ROSEVALE SALE BULLS COMPARE TO THE BREED?

Average Breedplan EBVs (July 2019) for Rosevale 2019 Sale Bulls:

ROSEVALE COMMERCIAL 'RED BEEF BULL' HERD

700 breeders are the engine room of the Rosevale Commercial Herd. Santa Gertrudis form the base of the herd with small infusions of both British and European genetics accounting for approximately 15% of the herd's blood.

The aim is to breed extremely fertile, high growth, trim underlined, polled cattle whose progeny are fast growing to a saleable weight and meet market specifications easily, off pasture at an early age.

Rosevale turn-off/cull cattle are sold into heavy export markets - grown and finished on pasture only.

The commercial breeding herd is run on lighter forest country with no supplements. Once weaned, calves are trucked to better country for growing. Mobs are mustered twice per year - for branding and weaning. At weaning, all cows are preg tested with the empties culled. In addition, females who turn up at branding without a calf are culled. With natural waters available, the only other time in the year we see some of the cows, apart from these two occasions, is when we take the bulls out of the herd.

Breeders are mated for a period of three months. We expect a pregnancy rate of greater than 90% and regularly achieve this.

Our strict selection criteria, especially in relation to fertility, has created a unique herd of working females.

RED BEEF BULL - JETHRO N14
sold for \$14,000 in 2018 to John Saunders

We make a basic cull on heifers then let pregnancy results do much of the work for us from then on. Further selection for quiet temperament, udder soundness and structural soundness add to the pressure put on the herd.

Male calves retained as bulls are mothered up at branding time and tail hair taken to determine their sire through DNA. While these bulls do not have Breedplan EBVs, they are extensively measured across a range of traits and can be directly compared with their Rosevale stud counterparts through adjusted weights and measurements.

The performance of these bulls is extremely satisfying and keeps on improving as our selection becomes more intense. They carry bloodlines that are tried and tested. We affectionately refer to these bulls as **Rosevale Red Beef Bulls** - because that is what they are!

Those with an infusion of composite blood offer a hit of hybrid vigour along with a genetic outcross in comparison to the purebred bulls we offer. Some people question the breeding ability of composite-bred bulls. The allround performance of these cattle in our program, which we have witnessed for as many as three generations of breeding, has convinced us that these cattle are the real deal. They weigh, grade, reproduce and give \$ returns up with our very best cattle.

RED BEEF BULL - KILLJOY N972
sold for \$14,000 in 2018 to Jabinda Past. Co.

LOT 52 ROSEVALE NEWPORT N918 (PP) HERD BULL

SB No: Calved: 1/10/2016 35 months

EIDSVOLD STATION DEBONAIR D48 (P)
ROSEVALE JABIRU J206 (P)
 ROSEVALE EMILIA D347 (P)

Rosevale K663(P) had one calf and was not mated for a second time.

Jabiru J206(P) was a supremely quiet bull. This is reflected in his Flight Time EBV which stands close to the very top of the breed at +0.66 seconds. Unfortunately we lost him with a broken back leg sustained in the bull paddock in one off-season.

Newport N918(PP) was retained as a sire in our Commercial Herd last season. His doing ability is a major strength along with his trim sheath. He ranked high for growth in his mob throughout his life and his slow flight time backs up his quiet temperament, inherited from his sire. Being homozygous polled is a bonus.

LOT 53 ROSEVALE GALLIPOLI P1060 (PP) HERD BULL

SB No: Calved: 15/09/2017 24 months

ROSEVALE ZEPPELIN Z490 (P)
ROSEVALE GALLIPOLI G128 (P)
 ROSEVALE BEGA A257 (P)

Rosevale E1093(P) had eight calves in eight years before being culled for age. These include Viscount J772(P) who sold for \$6,000 to Peter and Lisa Wippell in 2014. Her last calf is a weaner bull.

Gallipoli P1060(PP) is a homozygous polled bull who is long, deep and wide. Don't disregard this bull based on his lower raw EMA measurement. These bulls were supplementary fed after weaning last year

and seasonal conditions dictated that this was the case for an extended period. Due to high numbers of bulls on limited trough space and our determination to limit intake, some bulls got a go at the feed and some didn't. At 400 days there was a definite difference in weight gain between those that obviously fed and those that didn't.

See Page 56 for more detail.

At Rosevale we are realising the benefits of supplementing our young, growing cattle during periods of low rainfall. To do this in a cost effective way this requires the ability to restrict intake in order to have the cattle return a weight gain similar to what they would do normally on good pasture.

Universal Feeders have proved to be our feeder of choice for this purpose. In addition, they have proved to be tough enough to stand up to the mobs of bulls we supplement at times.

We recommend Universal Feeders to beef producers searching for a cost effective method of supplementation.

 ROSEVALE MAXINE Y142 (P)

Maxine C251(P) calved first as a two-year-old, has had eleven calves in eleven years, and is PTIC. Six of these have classified S, a herd bull son sold to Karen Howe, while her last is a weaner bull by Majestic.

Maxine Y142(P) calved first as a two-year-old and had sixteen calves in sixteen breeding seasons. She had one year out of production as a donor dam in an ET program where she produced a further

six calves. Twelve classified S progeny included Qulipie Z118(P) who sold to the Biara Stud for \$10,000 and Noddy D216(P) who sold to the Yulgilbar Stud for \$18,000. Three other sons sold for breeding. **Female fertility is no fluke. It is often the case that cows that breed annually for many years have mothers that did exactly the same thing. Bulls bred from these lines will help send female fertility north over time.**

BUYING OPPORTUNITY

With six years of below average annual rainfall totals recorded at Rosevale, and only 110mm of rain falling in the last eight months, seasonal conditions have caught up with us in 2019. At present we have 38 bulls running on 1,500 acres of planted forage oats!

This has meant that this year's bulls have been supplementary fed for extended lengths of time. This is in contrast to the way we want to grow our cattle out but unfortunately is reality in times such as these if we are to offer a product to industry.

We aim at growing our bulls at a similar rate to what they would on good pasture in order for them to remain sound and have long working lives. This can be done by using products that are not too 'hot' and by limiting feed intake. This does not always work perfectly to plan if there is not enough trough space with some animals getting more than their fair share and some far less.

In this group of bulls this has become evident, resulting in differences in raw performance measurements that can be related directly to feed differences. Roughly, about a third of the bulls gained weight particularly well prior to the 400 Day measurements and two thirds did not. For Breedplan analysis the bulls' measurements were sub-grouped as accurately as possible, based on daily weight gains.

If you want to make changes in your herd in traits that are affected by environmental differences then comparing raw measurements won't necessarily result in the changes you want. Let's take two current similar aged, sale bulls as examples:

LOT	400 DAY WGT	450 DAY EMA	450 DAY RIB FAT
21	468kg	106cm ²	2mm
93	402kg	87cm ²	2mm

By comparing the above measurements, it would make sense to come to the conclusion that Lot 21 would breed progeny that weigh heavier with higher Eye Muscle Areas than Lot 93's progeny. In addition, the two bulls would sire calves with similar Rib Fat.

Closer analysis reveals that Lot 21 received more feed than Lot 93 leading up to these measurements being taken. For fairer comparison, they were sub-grouped into mobs that had had similar treatment. The table below shows how these bulls compared to their respective mobs:

LOT	400 DAY WGT RANK	450 DAY EMA	MOB AVERAGE EMA
21	11/64	106cm ²	88cm ²
93	3/149	87cm ²	61cm ²

The above data puts a whole different spin on comparisons made between the two bulls. While Lot 21's raw measurements are higher, Lot 93 ranked extremely high in his mob for both weight and eye muscle area. In addition, his Rib Fat measurement of 2mm is in a group of leaner bulls due to having less feed.

It is in situations like this that Breedplan EBVs become very powerful because measurements taken on each animal are only compared with those that have had similar treatment. In addition, other measurements taken on the animal plus the relative performance of all known relatives are factored in to compute an animal's estimated breeding value for each trait.

Have a look at the Breedplan EBVs of these two bulls and you will notice that they have reasonably similar Growth and Eye Muscle Area EBVs, in fact Lot 93 has higher EBVs for all of these traits. Lot 93 also has a higher Rib Fat EBV as he had a similar rib fat raw measurement in a mob that was much leaner on average.

Never before at Rosevale have we seen larger disparities in our bull weights, scans and yearling scrotal sizes that have occurred due to feed differences. It has been a huge lesson in genetics for us.

In the Performance Table earlier in the catalogue, we have highlighted those animals who had less feed up until 400 days by shading the measurements that are affected. Those shaded should not be compared with those that are not. For those bulls that are Breedplan recorded, their EBVs are the best guide as all environmental factors and the performance of all relatives have been taken into account.

After the 400 Day measurements were taken, the bulls were drafted into smaller mobs. The bulls that had fallen behind started to catch up, especially when they got onto pastures that had responded to some summer rain. However, as pasture became limited, supplementary feed was relied upon to keep gaining weight. Some of the bulls that had not taken to the feed were left behind again.

A group of 30 annual sale bulls fall into this category. In late July these bulls were shifted to a paddock of oats we felt was good enough to feed. They have been identified by shading their brand numbers in the Performance Table and throughout the catalogue with an '**ON OATS**' symbol beside the bull's name. Hopefully the oats will last until sale day.

The following bulls are now on oats pasture:

Lots 92, 93, 95, 96, 97, 99-110, 112, 122, 123, 127, 129, 131-133, 135-139.

These bulls will not have daily weight gains up with the other sale bulls by sale day. Check their performance data out. **There is huge opportunity for buyers here to purchase these bulls at reduced prices as they will not look as 'flash' as the other sale bulls.** Their raw data will be a bit low but their EBVs will tell you how they will breed. We have retained a few bulls as sires from this group, despite them being up to 80kg lighter than their mates.

Settling in

While the bulls on offer have all returned a positive semen test, it is a known fact that if management changes, bull fertility levels can change. Changes that can cause stress include relocation/transport, change of diet, mixing with other cattle (especially different bulls), different stock handling techniques and personnel, exposure to new diseases and general changes in environment and temperature.

Because they are prepared on pasture, Rosevale bulls are ready to go straight out into the paddock without any letting down period. They should acclimatise quickly to varying environments as their guts are used to utilising pasture.

We believe in the principles of Low Stress Stockhandling. Our cattle are handled in a quiet way, but firmly so that they have an ability to respond to pressure in a positive way. Our bulls are generally handled in big mobs so do not have a lot of 'one on one' handling. Following sale day, single bulls are often trucked and dropped off by themselves. This is a big shock to their system and they should be handled in such a way that potential stress is reduced as much as possible.

It is a good idea to have cattle prepared for your new bull to go with on arrival, especially if he has travelled or is dropped off by himself. Holding him, alone in a yard is the worst thing you can do for your new bull. Because our fences are always in good order, our cattle respect them. For this reason you should be confident to let your new bull straight out in a paddock with other cattle so that he can relax and settle in.

Mating

It is preferable to mate young bulls together. If they are mated with older bulls they will often be

dominated and they won't get a fair share of the calves as a result. Dominance of older bulls can also be a major factor in young bulls being injured during the mating period.

Body Condition

The condition of working bulls is critical. The sperm production of bulls in poor condition may be impaired and semen quality compromised. Likewise, bulls that are overconditioned become unfit and once fat is laid down around the testicles, sperm production is affected, sometimes forever.

Because young bulls are growing and breaking teeth they lose weight faster than mature bulls when put to work. The good thing about them in comparison to the older bulls that were sold in the past is that they learn to become active early in life and we get an extra year's work out of them. If it is at all possible, looking after your young bulls (eg. on good quality pasture) following their first mating season will help set them up for the following season and prolong their productive lifespan.

With a full vaccination program in place, pasture preparation of our bulls, semen morphology test and after sale feeding, handling and loading service, we have done all in our power to set your new bull up for a long working life.

We hope that the above points may help you to get the most out of your purchases once on your property. In addition to all of the above, your new bull is guaranteed fertile. If we can be of any assistance do not hesitate to call David if you have any questions you need answered.

BENELKAY KILLJOY (P)

ROSEVALE KILLJOY G660 (P)

MULTIPLE

Killjoy P940 is **Rosevale L881(P)**'s first calf. Despite a positive pregnancy test at the end of her second mating, she failed to come in with a calf so was sold.

Killjoy G660(P) has been used as a mating sire to heifers and has bred well for us. His calves are particularly quiet natured, easy doing and sound.

Any female that fails to be pregnant or does not present with a calf at branding time is culled from the herd. This ensures that financial returns are maximised and drives genetic progress in our herd.

Killjoy P940 is a beefy, easy doing bull.

ROSEVALE L881 (P)

Rosevale G997(P) calved first as a two-year-old and had seven calves in seven years before being PTE and sold. Four sons kept as bulls include L710(P) who sold to Geoff Nicol for \$4,500 and one who sold to Mark & Robyn Ferling. Another son, who is a full brother to P784, was retained as a sire and sells as Lot 119 in this sale.

purchased at the 2012 Palgrove Sale for the top composite bull price of \$13,000. Next season will be his eighth as a sire - a testament to his soundness and longevity. High percent normal sperm results are a feature of both he and his progeny. His sons sold to a top of \$9,000 last year. He is represented by eight sons in this sale.

ROSEVALE G997 (P)

Palgrove Kenobi(P) is a red factor, Charolais/Angus cross bull. He was

Kenobi P784(PP) is a quiet, sound, homozygous polled bull.

NOTES

LET US HELP YOU

Sale day is very busy and the pressure of time makes it difficult for visitors to select through the cattle on offer and easily identify those that best suit their situation. We try to help out as many potential buyers as we can on the day but it is difficult to meet with everyone.

In order to make this job easier we would be more than happy to put together a shortlist of bulls that could best suit your operation. If you would like us to help you out, please answer the questions below which will help us understand what your requirements are.

Once completed, please either scan or copy the form and send to David and Sonya via email: rosevalesanta@bigpond.com

Country type: **Breeding** _____
