12th September 2019

VETERINARY REPORT

Hall Family Wagyu Bulls

On the 9th September 2019, at the request of Hall Family Wagyu I semen tested, using electroejaculator collection, and evaluated the following Wagyu bulls.

Junior Bulls Testicular circumference

N1	31cm
N3	32cm
N4	29cm
N5	34cm
N7	32cm

Senior Bulls

L15	37cm
L20	39cm
L39	36cm
K75	40cm

All the bulls had adequate semen density and motility. Testicles were all palpated and found to be uniform and of reasonable consistency.

All bulls had reasonable structure and conformation and were found to be in good health.
