Mustering springing Angus cows to truck home in July for calving at "Dalby Downs". This enables us to record the birth date, birthweight and dam of each calf and collect a DNA sample.

Welcome to the Burenda Angus & Brangus Annual Clermont Bull Sale

It is with great pleasure we offer 85 well grown good Angus & Brangus bulls at our Eleventh Annual Clermont Bull Sale. The spectacular offering will comprise of **43** Burenda Black Brangus and **42** Angus Bulls. And for the first time we will be offering the 43 Brangus bulls up first before the Angus. Genetically these bulls represent some of Queensland's best bulls on offer with progeny by some of Australia's best AI sires together with several outstanding Burenda sires. Of the **85 catalogued bulls 75% are better than breed average for their respective breeds of Angus Breeding, Domestic, Heavy Grain, Heavy Grass, Export Steer and Domestic Steer Index Values. 66% of the sires are ideal for joining to heifers** for calving ease, gestation & birthweight to produce small early born calves that will grow like steam. A good number of both breeds of bulls are in the top 20% for their breeds. For your convenience we have shaded the EBV's of each sale lot in the top **10% blue** and top **20% yellow**. These bulls are bred in Queensland under commercial conditions and come with a full 2 year fertility guarantee which is detailed in the sale information pages in this catalogue.

As you all know we were faced with some tough decisions in 2019 regarding the economics of feeding and selling cattle in a tough environment. Burenda opted to production feed our breeders and followers through to Christmas 2019 with the idea in mind that if we needed to, we could sell good conditioned cattle well on a sluggish market. We started with our commercial cows and then reduced the Angus & Brangus Stud herds down to 1000 breeders. We were well rewarded with several B-Doubles of females bringing averages just over \$2000/head. It was a hard decision to make as the majority of these cows were pregnant. However, the remaining cows have not looked back and are looking terrific and back out on agistment doing what commercial cows should be doing. By the time you read this the cows will be back at "Dalby Downs" and will have finished calving.

As part of our survival plan, we early weaned all our calves at 2-4 months of age with an average weight of 170kg. This enabled us to try and feed them the appropriate level of nutrition to maintain growth and health. Since weaning in December 2019 most weaners have averaged 1kg/day before the rain and now are well over this. The cows were pregnancy tested early to identify the AI and 1st cycle pregnancies which we kept and put on maintenance rations. Later pregnancies females were sold. Over the last 15 years we have made good gains on fertility and progeny performance by being tough on fertility and temperament. Both of these traits are directly related to performance in the herd and there is no doubt the Burenda herd has benefited by the high standards we set ourselves for these two traits. Fertility is crucial and this with adequate nutrition we believe plays a lot bigger part in the breeding philosophy and performance of a herd than we all would like to believe. The Burenda pregnancy testing rate this year is the lowest in 16 years at 89% which we feel is still very good as mother nature hasn't exactly been kind to them at joining time late last year.

We have again included the actual calving interval or ACI in our catalogue comments for those that use this information. Most lots have good ACI's of around 365 days. There are also others marked as Donor (AI ET), sold and 365/recipient. The recipient means his dam has had both natural and embryo calves. The majority of our females are younger due to the herd reduction and as we find these cows have the improvements of fertility, calving ease, growth, and carcass data that we are looking for. Our improvement in EBV's has been very noticeable in both our cows and the 2020 sale bulls. The combination of improvements in the fertility, EBV's, genomics and raw data performance within the Burenda herd has led to improved profitability through attention to these genetics. We aim to run the Burenda females as if

Early weaning calves off the maiden heifers and walking the weaner bulls to a fresh paddock two months after weaning

they were a commercial beef herd which gives us confidence that the sires we sell, will produce progeny that can perform in the QLD environment and still meet market acceptability.

Burenda has always used DNA verification where needed over the years and in the last 4 years all Angus & Brangus progeny born have now been parent verified to a sire and a dam where possible and then had genomics incorporated into the EBV's. We have seen a slight improvement in our EBV's and a significant lift in the accuracy of these figures. Over the next few years we expect to see some good changes occurring in our breeding for better commercially focused carcass animals. Within 5 years we expect the entire Burenda female herd to have a DNA, genomics, and genetic defects profile. Some of this year's sale bulls are not genetic defect tested and our thoughts on this are that we have far more important influences that we can control in the breeding productivity of the average commercial herd such as a good vaccination program for Vibrio, Botulism, Tick Fever, 3 Day Sickness, Pestiguard, and calf scours coupled with good nutrition. Any of these can cause a significant financial loss to a producer more so than the rare incidence of a genetically affected calf. We can make better productivity gains by focusing on more economically important elements of our businesses.

Manager Jonathan Schmidt has the bulls in great shape and they are doing well on the oats. There are photos of many of the bulls on our website. Please contact Jonathan on 0429 067 313 for any further details. Auctions Plus will be active again this year with Live Streaming attached for those unable to make the sale and who would like to see the bulls go through the ring. Our insistence on breeding for fertility, growth and carcass quality is paying dividends. We believe buyers will be impressed when they assess this year's draft. The sale bulls will average over 860kg and have plenty of length, strength and fleshing ability. The catalogue includes 56 sires suitable for use on heifers. Please view full details of each bull on our website www.burendaangus.com.au and remember - you are always welcome at Burenda to check out our herd and operation.

SALE INFORMATION

Sale location and inspection times

The Burenda Angus & Brangus Bull Sale 2020 will be held at the Clermont saleyards. Sale time is 10:00am 8th October 2020 and inspections can be made from early on sale day.

Identification

All bulls have NLIS tags, lot numbers and freeze brands.
The Burenda PIC number is QAWB0619
All bulls are registered with the Angus & Brangus Societies of Australia.

Safety Rules & Recommendations

We are confident all our bulls offered for sale are quiet and of sound temperament and are used to being handled in yards. However sale day brings a differing set of conditions and the bulls are subjected to unusual levels of noise and pressure with many people invading their space. Even the quietest bull is still an unpredictable animal who can misbehave. Visitors entering pens do so at their own risk and are subject to conditions set out by the Roma Saleyards.

Buyer Registration

A buyer registration system will apply. Please register with the selling agent well before the auction commences.

AuctionsPlus will be running in conjunction with this sale and registration must be completed within the conditions set out by AuctionsPlus. For these terms and conditions please visit www.auctionsplus.com.au

Sale Conditions

All lots will be sold subject to the usual conditions governing auction sales which will be displayed on the day and are detailed in the back of this catalogue. The auction price is **exclusive of GST**

Rebate

The vendor has agreed to allow 6% rebate to outside agents introducing the approved buyers no later than 24 hours prior to the sale, accompanying their buyer to the sale and settling on their behalf within 7 days of the sale. For outside agents introducing approved buyers within 24 hours prior to the sale **BUT NOT** attending the sale with their clients, a 3% rebate will be paid

Delivery and Transport

Free transport and delivery to selected Major centres is available by negotiation with Burenda Manager Jonathan Schmidt after the sale has concluded.

Genetic Defects

Burenda has not tested any of the sale lots for genetic defects. Most lots have low percentages which we consider the risk is minimal. As I have mentioned previously there is more to be gained financially from improving nutrition and fertility than avoiding good sires that have a percentage on a defect.

COVID – 19

Due to the current situation with COVID-19 Burenda Angus & Brangus would like everyone to still feel free to attend the sale in person, but please do so under the best practices of hygiene and social distancing. The Clermont Saleyards - Isis Council have procedures in place at the yards which we are to abide by. There may have a restriction on the number of people allowed in the sale complex. Hence it may well be that families and partners may be unable to view the sale in person. Similarly, on inspecting the bulls in the pens we need to consider others and follow the social distancing guidelines. If feeling unwell we recommend to stay at home and use Auctions Plus for any purchases or contact your agent or myself on 0429067313. Hopefully by the time the sale comes around we will be getting back to normal.

Health Treatments

All Burenda Angus bulls presented at the sale have been treated for the following:

Pestiguard vaccine
7 in 1 vaccine Vaccine
Botulism Vaccine
3 Day Sickness
Vibrio Vaccine
Tick fever Blood

And pre treated for lice.

Burenda has a JBAS score of 7. Bulls are free to travel to WA & NT

INSURANCE

Ownership passes at the fall of the hammer. Insurance can be arranged on the day through H & Wilkinson or your own agent

Breeding Soundness & Semen Test

All bulls have been semen & morphology tested and passed satisfactorily for soundness by John Chapman of South East Qld Genetics. Full details will be available on sale day

Raw Data

All bulls will be selling with full information on weights, scrotal measurements and ultrasound scanning details. Enquiries prior to the sale regarding raw data can be made by contacting Jonathan Schmidt on 0429 067 313 also raw data will be posted on our website prior to sale day at www.burendaangus.com.au

Semen Interest In Bulls

Burenda will retain a half interest in any semen sold from bulls in this sale. Because Burenda sells most of their top bulls it is possible they may wish to collect semen at some future date for their own use or for sale. This is a revenue sharing opportunity for buyers. We retain the right to access bulls at a negotiated time and place and at Burenda's cost. Owners have the right to use their half share in their own herds or revenue share with Burenda in semen sold to other users.

2 Year Guarantee

In addition to the standard warranties provided in stud stock auction terms, Burenda is proud to provide a 2 year guarantee for all bulls sold at this sale. We warrant that the bulls are fertile and capable of natural service at the time of the sale. Should a bull become infertile or break down within 2 years for reasons other than injury or misadventure from 8th October 2020 Burenda will:

1. Provide you with a satisfactory replacement
OR

2. Provide you with a credit equal to the purchase price of the bull less salvage value and less seasonal value. This credit may be used at any future Burenda Bull Sale.

Burenda WILL require you to provide a veterinary report.

IMPORTANT NOTICES FOR PURCHASERS

SALE CATALOGUE DISCLAIMER

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder nor owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, neither the vendor, Angus Australia or the selling agents assume any responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

PARENT VERIFICATION SUFFIXES

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name are as follows:

PV: both parents have been verified by DNA

SV: the sire has been verified by DNA

DV: the dam has been verified by DNA

#: DNA verification has not yet been conducted

E: DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

PRIVACY INFORMATION

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

BUYERS OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO ANGUS AUSTRALIA

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its database and disclosing that information to its members on its website.

*I, the buyer of animals with the following idents
.....
..... from member(name) do not consent to Angus Australia using my name, address and phone number for the purposes of effecting a change of registration of the animals I have mentioned above that I have purchased, maintaining its database and disclosing that information to its members on its website.*

Name:Signature:

Date:

Please forward this completed consent form to Angus Australia, 86 Glen Innes Road, Armidale NSW 2350.

If you have any questions or queries regarding any of the above, please contact Angus Australia on (02) 6773 4600 or email office@angusaustralia.com.au

A BRIEF DESCRIPTION OF EBVS

UNDERSTANDING ANGUS BREEDPLAN EBVs

What is Angus BREEDPLAN?

Angus BREEDPLAN is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. Angus BREEDPLAN uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcass, fertility).

Angus BREEDPLAN includes pedigree, performance and genomic information from the Angus Australia and New Zealand Angus Association databases to evaluate the genetics of animals across Australia and New Zealand.

Angus BREEDPLAN analyses are conducted by the Agricultural Business Research Institute (ABRI), using software developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England. Ongoing BREEDPLAN research and development is supported by Meat and Livestock Australia.

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

Using EBVs to Compare the Genetics of Two Animals

Angus BREEDPLAN EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcass than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals in Australia and New Zealand.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to:

- ◆ the breed average EBV
- ◆ the percentile table

The current breed average EBV and percentile table is provided in these explanatory notes.

Considering Accuracy

An accuracy value is published in association with each EBV, which is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50- 74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of Angus BREEDPLAN EBVs

EBVs are calculated for a range of traits within Angus BREEDPLAN, covering calving ease, growth, fertility, maternal performance, carcass merit, feed efficiency and structural soundness. A description of each EBV included in this sale catalogue is provided on the following pages.

BIRTH			
Calving Ease Direct	(%)	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
Calving Ease Daughters	(%)	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
Gestation Length	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
Birth Weight	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
GROWTH			
200 Day Growth	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
400 Day Weight	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
600 Day Weight	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
Mature Cow Weight	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
FERTILITY			
Days to Calving	kg	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
Scrotal Size	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
CARCASE			
Carcase Weight	kg	Genetic differences between animals in hot standard carcass weight at 750 days of age.	Higher EBVs indicate heavier carcass weight.
Eye Muscle Area	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
Rump Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
Retail Beef Yield	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
Intramuscular Fat	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.

FEED EFFICIENCY

Net Feed Intake (Post Weaning)	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a growing phase.	Lower EBVs indicate more feed efficiency.
Net Feed Intake (Feedlot)	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.

TEMPERAMENT

Docity	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
---------------	---	---	--

STRUCTURE

Front Feet Angle	%	Genetic differences between animals in desirable front feet angle (strength of pastern, depth of heel).	Higher EBVs indicate more desirable structure.
Front Feet Claw Set	%	Genetic differences between animals in desirable front feet claw set structure (shape and evenness of claw).	Higher EBVs indicate more desirable structure.
Rear Feet Angle	%	Genetic differences between animals in desirable rear feet angle (strength of pastern, depth of heel).	Higher EBVs indicate more desirable structure.
Rear Leg Hind View	%	Genetic differences between animals in desirable rear leg structure when viewed from behind.	Higher EBVs indicate more desirable structure.
Rear Leg Side View	%	Genetic differences between animals in desirable rear leg structure when viewed from the side.	Higher EBVs indicate more desirable structure.

SELECTION INDEXES

Angus Breeding Index	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems.	Higher selection index values indicate greater profitability.
Domestic Index	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade.	Higher selection index values indicate greater profitability.
Heavy Grain Index	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 200 day feedlot finishing period for the grain fed high quality, highly marbled markets.	Higher selection index values indicate greater profitability.
Heavy Grass Index	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers.	Higher selection index values indicate greater profitability.

Emperor has over 8100 progeny and is the top selling son of Berkley for \$91000. His progeny stand out for muscle pattern and capacity, blending calving ease with high growth and carcass weight. The use of Emperor in the Burenda cow herd has produced thick meaty progeny with sire looks and exceptional doing ability. 6 Sons Lots 46,47,49,70,84 & 85.

Genesis has well over 2354 progeny recorded in a very short space of time due to the merit of his carcass traits. One of a few sires around with all EBV traits where we would like them. He has been easy to use over all cows. Ten traits that count in the top 10% are gestation length, 200, 400 & 600 day growth, milk, mature cow wt, scrotal, carcass weight EMA & rib fat. Producing outstanding ABI, DOM, GRN & GRS index values all in the top 10%. 5 Sons Lots 48,51,67,78 & 79.

285 progeny across 9 breeders and three top studs, Clunie Range, Ascot & Burenda in a short time frame. On inspection Kaluha was a smooth clean coated sire with a high level of carcase merit. We used him to improve growth, carcase weight, EMA, Rib, Rump & IMF and he certainly produces some high index progeny. **Top 2% for AB, Heavy Grain & Heavy Grass markets. 6 Sons Lots 50,59,68,69,73 & 81.**
