GLENORE POLL DORSET STUD

Here at Glenore, our breeding programs aim is to produce rams with the true Dorset type, excellent spring of rib, early maturity and high yielding carcasses for all marketing options- suckers, trade or export. Our flock rams are purely grass fed. This also provides you, the Primary Producer, the ability to finish your stock on pastures and know that you also will have the desired results.

Although there has been no Sheep Shows this season due to CoVid, we at Glenore have still kept a selection of high quality Stud Ram's for your selection. Many of this year's rams are sons to Glenore 74/17 which received highly commended at the Australasian Dorset Championships. Due to his outstanding hind quarter, depth of body and breeding outstandingly, he has been retained in the Stud. We have also purchased Tattykeel 825/17 for $8000 in partnership with Sunnybanks Stud. There will be many sons represented throughout the sale by this outstanding sire.

This year we will be holding our 10th Annual On Property Sale. We are very pleased with the quality of Stud and Flock rams that we have on offer. With solid returns over the last 12 months, producers can feel confident in seeking the best quality on genetics available for maximum returns.

This year's sale will interfaced with Auctions Plus and we will have all rams available for private inspection by appointment from the 1st October. This will give all clients the opportunity to view our rams prior to the sale.'

Due to this ever changing world we are living in, we are putting all measures in place to keep everyone healthy and safe, our sale will be following all the CoVid guidelines. We ask that Social Distancing Measures be observed. With this being said, we look forward to a safe and enjoyable sale for everyone.

This year's line-up will not disappoint!

Best Regards

Pete & Gill & family

GLENORE STUD SIRES

HILLDEN 863-16
Extremely correct and well balanced ram with true Dorset type.
Breeding exceptionally well .

SPRINGWATERS 496-16
Very correct ram with great muscle and clean points.

GLENORE 248-15
Retained in Stud. Exceptional hindquarter.

TATTYKEEL 731-14
Junior Champion Sydney Royal 2015.
Stylish and very correct Spring Drop Ram – Purchased for $8000.

TATTYKEEL 121/07 (Echo)
Purchased in partnership with Graythorn stud for $5500
Progeny has produced exceptional loin muscle.

FERNLEE 300/11 ET
Well balanced son of Tattykeel "Icon".
Purchased for $3500

TATTYKEEL 407/08
2nd Bare Shorn Pair Cowra, 1st Bare Shorn Pair Australasian.
Purchased for $7000, sired by the famous Tattykeel "Ripper".
Purchased for its length and muscling.

TATTYKEEL 641/10 ET
Excellent length and balance. Tattykeels top spring drop ram.
Purchased for $6500

GLENORE 243/12
Early maturing type with excellent downs wool.
2nd Ram Lamb Australasian Dorset Championships.

GLENORE 222/12
Very correct ram with exceptional hind quarter.
1st July class Hamilton Sheepvention.

GLENORE 74-17
Highly Commended Australasian Dorset Championships.
Retain in Stud for his outstanding hind quarter and
deep body. Breeding Outstandingly.

TATTYKEEL 825-17
Purchased for $8000 in partnership with Sunnybanks Stud.
Highly muscled son of Tattykeel "HULK", progeny looking exceptional.

WHAT IS THE MEAT INDEX?

The meat index formula is based on the eye muscle width (A), eye muscle depth (B) and fat (C) measurements. A higher predominance is given to eye muscle width (A) because it is more heritable while eye muscle depth (B) is influenced by environment factors. Fat (C) is penalised slightly. The resulting number is then adjusted for the age of the sheep, so the index is what the sheep's index would have been at eight months of age.

SCANNING MEASUREMENTS

Scanning for performance traits in animals has become a significant on–farm measuring tool for many years.

Australian Stockscan Services P/L scanners assess sheep at around 8–12 months of age for:

- Live Weight (LW)
- Eye Muscle Width (A)
- Eye Muscle Depth (B)
- Fat Depth (C)
- Eye Muscle Area (EMA) is calculated using the eye muscle width (A) and depth (B) measurements (A x B).
- Eye Muscle Area (EMA) to Live Weight (LW) ratio calculated.

WHY THE MEAT INDEX?

The meat index allows a group of young sheep with different live weights, eye muscle dimensions and fat depth to be analytically compared.

Referring to the diagram at right, research has shown that:

- Eye muscle width (A) is more to do with the type of animal, i.e. shape and leanness.
- Eye muscle depth (B) is associated with the environment; feeding etc., which could change the ranking, if the animals were under stress at the time of scanning.

Fat Depth (measurement C) affects the index only slightly.
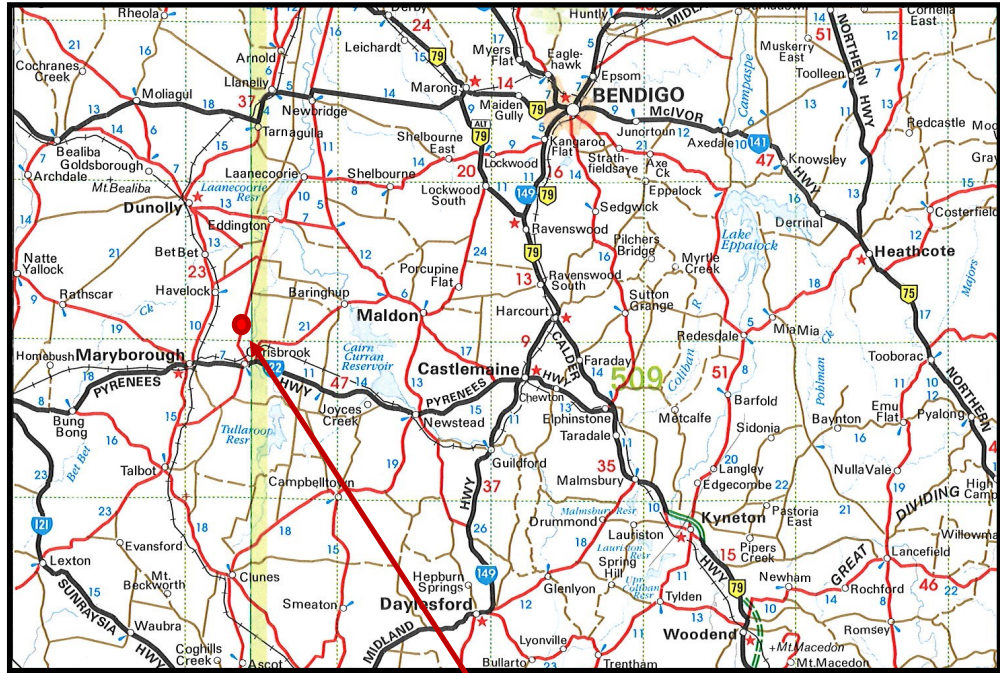

MUSCLE TO WEIGHT RATIO

The muscle to weight ratio figure (EMA/LW) is calculated to help the breeders identify sheep with more meat, thus higher yielding carcasses. With the introduction of VISCAN these higher yielding carcasses will be more profitable.

LOIN MEASUREMENT

Stockscan in New Zealand has been working with Agresearch and together have perfected a technique to provide a loin measurement. We feel this has tremendous benefit to breeders and their clients.

Loin measurement will identify lambs which have good body length and are well muscled. Shoulder issues and mobility are a problem related to shorter sheep; these types are not able to progress into a class of heavier carcass weights. Identifying longer bodied sheep with optimal muscling could have benefits for the sheep industry.

If requested, loin measurement will be available to Australian clients and the processed results included with your normal analysis data report.
