

LOT NUMBER	ANIMAL IDENT (full ident, no spaces)	COMMENTS
	BHEK7	Black Hawk requires no introduction. He is one of the prepotent full horned blood bulls in the Hereford breed and has been a dominant breeding bull in many herds. He is an extremely free moving, low fault sire and does not miss. Some of the very top young females in our herd are sired by Black Hawk.
	AEDK4	\$40,000 sire purchased by Glenden Park - K4 has bred some beautiful young breeding females and we have retained a son (TCCN161) for use over stud females last year. Powerful data set and backed by a powerhouse breeding female in the Dawn B22 cow. Trait leader in 4 traits, leading calving ease data and a massive +6.8 EMA.
	FSAK160	It's hard to find cattle that have high end muscle content and also excellent front end extension, Knockout is one sire with both - some lovely young females in our herd by this \$52,000 Wodonga National Grand Champion.
	WNAG285	Outstanding sire here at Thornleigh - G285 has bred extra carcass and growth into his progeny. We have used a son L371 (Brisbane Grand Champion 2017) via AI after he topped our 2017 sale at \$16,000. There are many good daughters also in this sale.
	JENJ374	By the great breeding bull Mawarra Unique, J374 has been a truly great operator. He is a terrific doing bull - always in great shape no matter how hard the season is. He has maintained and improved a very solid set of numbers through 5 seasons. We purchased him in partnership with Don Woods and he's done 2 seasons each year. Some really good females in the sale. For sale at Lot 302.
	SBDJ14	June J14 is a son of Ian Durkin's highest rated cow at the time A23 and was a bull with outstanding fleshing. We unfortunately lost him after 2 seasons and are only now realising the extent of our loss as his daughters start rearing calves - they are truly wonderful females - some of the top end cows in the sale.
	TCCG338	Some of my favourite females in the herd are progeny of G338. They are as perfect in the udder and teat structure as any bull we've ever used and his sons were big, long and powerful. Many of our cattle show a trace of the great Mawarra Minerva 554 and he is one.
	OCTL133	We were looking for extra carcass and depth of body and L133 ticked the box more than any we could find. He is moderate in his birth weight with high growth and muscle in his data. In the flesh, he is as deep as any and the progeny are as soft as we can breed them. He is for sale in this sale and we recommend him highly. For sale at Lot 301.
	TCCN161	N161 is a carbon copy of his \$40,000 sire Anzac K4 with an extra rib and maybe a frame score up - he is as long as a train and we would expect him to be a breeder of excellent females - there are a number of beautiful young females by Anzac K4 in this sale. He is for sale at Lot 300.
	TCCN240	Used in the stud for the 2019 joining, N240 is a very long bodied, round topped bull with a lovely skin. Both his mother J200 and grandmother (F138) are in the sale and are high milking females. He sells at Lot 299.

	TCCL371	Brisbane Grand Champion Bull in 2017 - L371 is a high carcass quality breeder and a short gestation specialist - he is in the top 2% for GL. His dam - H160 (Lot 6) is at the pinnacle of our cow herd and has 2 other outstanding Black Hawk daughters in the sale - one an ET donor female (P256 - Lot 14).
	TCCE341	We retained E341 for his outstanding carcass quality - the squarest made cattle we've bred with such ease of doing that the mix of high carcass quality and ability to put cover on has left a great legacy in the females he left us - they are great milkers and can add quality to any joining. An unsung hero in our female herd with many high worth daughters in the sale.
