## Bull Breeding Soundness Report

On the 12th November 2020 I performed a Bull Breeding Soundness Examination on TBRFN293, a 3yo Wagyu bull, at Chadwick Downs, Coonabarabran, NSW.

The findings of the examination were as follows:

<b>Structure:</b>	No abnormalities detected
<b>Eyes/Jaw:</b>	No abnormalities detected
<b>Scrotal Circumference:</b>	35cm
<b>Scrotal Contents:</b>	No abnormalities detected
<b>Penis &amp; Prepuce:</b>	Normal visualised
<b>Semen Concentration:</b>	4/5
<b>Sperm Motility:</b>	~60%
<b>Sperm Morphology:</b>	NOT PERFORMED
<b>Serving Capacity:</b>	NOT PERFORMED

From the findings described above, I would consider this bull fit for work.

Sincerely,

Veterinarian: John Bowman  
Vet Qualification: BSc BVMS  
NSW VPB Registration: N10947
