3% Rebate to outside agents registering their clients in writing by the working day prior to sale day. The agent must accompany buyer on sale day and settle for clients within 7 days.

# CLAREMONT ANGUS

## Sale Conditions:

We are pleased to offer our bulls in the same format as last year. Our sale will be conducted as an auction but not through a bull ring. The bulls will remain in their pens. The sale will be conducted in a shed close by. To aid you in purchasing the bulls, there will be a large screen inside to view the bulls. This year there will be a moving video of each lot. Each bull will be shown on the screen, in lot order and auctioned. More time in viewing the cattle before the sale commences is highly recommended.

We have done this for two reasons: Occupational, Health and Safety issues and time involved for preparation of sale. We also think it is less stressful on the bulls. We think this is the way of the future. Please feel free to offer your opinion on this new selling format over a drink after the sale.

## Bull Health:

All bulls have been vaccinated with 7 in 1, Vibrovax, Pestiguard and drenched with Dectomax prior to sale day. We recommend a booster of Vibrovax and semen testing prior to joining each season.

## History:

Angus cattle were first introduced to *Claremont* in 1940 with the purchase of 40 heifers from the Kahlua Stud. New bloodlines were added with the purchase of bulls from the annual Angus sales at Wodonga. In the late 1960's it was decided to breed our own bulls from our own specially selected cows.

This meant we could breed Angus cattle with their own stamp and particular style, unique to *Claremont*. With vast improvement in AI techniques and astute blending of worldwide genetics, we believe each new drop of calves is better than the last.

Our aim for the future is a blend of muscle, structure and growth in a consistent package year in year out.

## Inspection of Cattle:

Bulls can be viewed on the day of the sale, or prior inspection by arrangement.

## Delivery:

Free delivery for the first 100km's radius from Claremont. To be coordinated immediately after the sale, and be trucked directly from the property.

## Insurance:

All cattle are at the purchaser's risk from the fall of the hammer. We recommend all cattle be insured.

## 12 Month Guarantee & Fertility:

As with any species, fertility can be a problem. This is why Claremont Angus semen test ALL sale bulls, this testing was done on the 7th February 2020. Bulls are examined by Nationwide Artificial Breeders Pty Ltd for erection abnormalities and satisfactory sperm count specifications. The visual test identifies penile warts, hair rings, injuries and penile frenulums by undergoing a physical examination of external genitalia and conformation. The crush side semen test involves qualified analysis of spermatozoa for motility, concentration, morphology and semen infections such as seminal vesiculitis. This information provides testicular and epididymal function which helps predict the potential fertility of the bull. Only bulls that pass this strict testing regime are certified and make the sale listing.

This testing was done by Drew Pickford from Nationwide Artificial Breeders. Buyers shall receive proof of fertility of each purchased bull after the sale.

In the unlikely event of a bull proving to be infertile or incapable of natural service the vendor will credit the purchase price to be used at the next sale, less the salvage value of the bull provided the problem is not caused by injury or disease contracted since taking delivery.

Any claim must be accompanied by a relevant veterinary certificate.

## STUD STOCK BUYER

**Claremont** aim to maximise the reproductive integrity and health of their stud stock by adopting the Zoetis STAR Program - this is **Steps Taken Against Reproductive disease.**

**Each Zoetis STAR certified animal bull in this catalogue has been**

- Tested to show that they are not Bovine Viral Diarrhoea (BVDV) Persistently Infected (PI) animals
- Vaccinated against BVDV to ensure they are protected to the effects of this infection
- Vaccinated against Leptospirosis, a potential reproductive and OH&S risk for cattle handlers
- Vaccinated against Vibriosis, a sexually transmitted cattle disease
- Given 2 vaccinations to ensure they have immunity established prior to leaving these premises
- Issued with a Zoetis STAR certificate - valid for 12 months

You can be confident that every step has been taken by this stud breeder **Claremont** to ensure that these animals presented for sale will not introduce preventable reproductive diseases into your heard.

Contact Zoetis for further information on

## DISCLAIMER AND PRIVACY INFORMATION

### IMPORTANT NOTICES FOR PURCHASERS

**ATTENTION BUYER:** *Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.*

#### **Parent Verification Suffixes**

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name are as follows:

*PV: both parents have been verified by DNA*

*SV: the sire has been verified by DNA*

*DV: the dam has been verified by DNA*

*#: DNA verification has not yet been conducted*

*E: DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.*

#### **Privacy Information**

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

#### **BUYERS OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO ANGUS AUSTRALIA**

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its database and disclosing that information to its members on its website.

*I, the buyer of animals with the following ids.....*

*..... (name) do not consent to Angus Australia using my name, address and phone number for the purposes of effecting a change of registration of the animals I have mentioned above that I have purchased, maintaining its database and disclosing that information to its members on its website.*

*Name: ..... Signature: .....*

*Date: .....*

Please forward this completed consent form to Angus Australia, 86 Glen Innes Road, Armidale NSW 2350.

If you have any questions or queries regarding any of the above, please contact Angus Australia on (02) 6773 4600 or email [office@angusaustralia.com.au](mailto:office@angusaustralia.com.au)

# UNDERSTANDING THE TRANSTASMAN ANGUS CATTLE EVALUATION (TACE)

## What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation (TACE) is the genetic evaluation program adopted by Angus Australia for Angus and Angus infused beef cattle. TACE uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcass, fertility).

TACE includes pedigree, performance and genomic information from the Angus Australia and New Zealand Angus Association databases to evaluate the genetics of animals across Australia and New Zealand.

TACE analyses are conducted by the Agricultural Business Research Institute (ABRI), using beef genetic evaluation software developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

## What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

## Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcass than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

## Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals in Australia and New Zealand.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes.

For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

## Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

## Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcass merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following pages.

# UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

BIRTH			
<b>Calving Ease Direct</b>	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
<b>Calving Ease Daughters</b>	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
<b>Gestation Length</b>	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
<b>Birth Weight</b>	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
GROWTH			
<b>200 Day Growth</b>	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
<b>400 Day Weight</b>	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
<b>600 Day Weight</b>	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
<b>Mature Cow Weight</b>	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
<b>Milk</b>	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
FERTILITY			
<b>Days to Calving</b>	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
<b>Scrotal Size</b>	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
CARCASE			
<b>Carcase Weight</b>	kg	Genetic differences between animals in hot standard carcass weight at 750 days of age.	Higher EBVs indicate heavier carcass weight.
<b>Eye Muscle Area</b>	cm <sup>2</sup>	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
<b>Rib Fat</b>	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
<b>Rump Fat</b>	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
<b>Retail Beef Yield</b>	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
<b>Intramuscular Fat</b>	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.

## FEED EFFICIENCY

<b>Net Feed Intake (Feedlot)</b>	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
----------------------------------	--------	--	---

## TEMPERAMENT

<b>Docility</b>	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
-----------------	---	---	--

## STRUCTURE

<b>Front Feet Angle</b>	%	Genetic differences between animals in desirable front feet angle (strength of pastern, depth of heel).	Higher EBVs indicate more desirable structure.
<b>Front Feet Claw Set</b>	%	Genetic differences between animals in desirable front feet claw set structure (shape and evenness of claw).	Higher EBVs indicate more desirable structure.
<b>Rear Feet Angle</b>	%	Genetic differences between animals in desirable rear feet angle (strength of pastern, depth of heel).	Higher EBVs indicate more desirable structure.
<b>Rear Leg Hind View</b>	%	Genetic differences between animals in desirable rear leg structure when viewed from behind.	Higher EBVs indicate more desirable structure.
<b>Rear Leg Side View</b>	%	Genetic differences between animals in desirable rear leg structure when viewed from the side.	Higher EBVs indicate more desirable structure.

## SELECTION INDEXES

<b>Angus Breeding Index</b>	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems.	Higher selection index values indicate greater profitability.
<b>Domestic Index</b>	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade.	Higher selection index values indicate greater profitability.
<b>Heavy Grain Index</b>	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 200 day feedlot finishing period for the grain fed high quality, highly marbled markets.	Higher selection index values indicate greater profitability.
<b>Heavy Grass Index</b>	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers.	Higher selection index values indicate greater profitability.

# NOTES

A series of horizontal dotted lines for writing notes.
