ANNUAL PRODUCTION SALE

TUESDAY 25th FEBRUARY 2020 - SALE 11.30 AM

48 POLL HEREFORD BULLS 48
5 BLACK SIMMENTAL BULLS 5

Field Day, Tuesday, 5th February, 2020

AT STUD YARDS
2243 RANGE ROAD
MORGANVALE, WILLALOOKA S.A.
PMB 45 KEITH 5267

www.morganvalebeef.com.au

SALE INFORMATION

Inspection

All cattle available for inspection from 9.30am on morning of sale, inspection can be arranged before hand by appointment.

Sale Format

The sale will be conducted as a video open auction sale – extra time prior to the sale in making selections is recommended

Delivery

Free delivery provided it is coordinated by the vendor. While every care is taken no responsibility can be accepted whilst awaiting delivery.

Health

All Morganvale cattle are officially government confirmed as TB free, Brucellosis free.

The property has a J-BAS score 7 for Bovine Johnes Disease.

All cattle are EU accredited and Ear notched tested negative for Pestivirus.

All Bulls have been semen tested in January 2020.

Accommodation

The vendors will be pleased to arrange accommodation in Keith, Bordertown or Naracoorte at the many and varied accommodation types available.

Insurance

Can be arranged for transit and/or periods up to 12 months.

Representation will be in attendance on sale day.

Rebate

A rebate of 5% will be allowed by the vendors to interstate agents (other than interstate representatives of selling agents) and South Australian Associated agents on any purchase they influence, provided that they advise the selling agent in writing and make settlement giving the names of the purchasers not later than twelve (12) hours prior to the sale.

Disclaimer

The owners, employees, sale staff and representatives accept no liability for accidents that occur. Any person attending does so at their own risk.

Morganvale Welcome

you to their On-Property Bull Sale

We take this opportunity to invite you to our 14th annual on-property sale. We appreciate the support from past and new clients over the past thirteen sales with your purchases and positive comments. The sale will be held at the Stud Yards at Morganvale once again with the format of video auction also used again. In keeping with making our sale easily accessible AuctionsPlus will be available for purchasers unable to attend, or wishing to follow the sale.

This year's sale offering will again include a draft of Black Simmental bulls, a breed we believe offer the commercial cattle breeder a viable cross breeding option.

The first sons of Woonallee London are on offer.

This year's Poll Hereford sale draft features progeny from 9 sires used in 2017. These bulls show the consistency of type we are now seeing from our dedicated breeding goals. The large sire battery ensures there is enough variance of type to be able to satisfy producers with different breeding objectives, self-replacing herds to terminal herds. The offering shows increased uniformity as heifers join the breeding herd from our disciplined breeding program. All females are culled for feet, udders, temperament and fertility. From a large number of cows only the top 30% of bulls make it to our sales.

The sale bulls feature the first sons from Morganvale Larkin and Glendan Park Lambert, the progeny are sure to impress. They join proven sires in Wirruna Hotstuff, Redgate Ruler, Mt Difficult K18, Days Fabulous K173 and Morganvale Calibre K233 who all breed the carcass traits we are striving for plus maintaining the bred traits Poll Herefords are noted for. We believe these sires give clients a variation in type and blood lines but also consistency and profitability.

We are pleased with this year's draft, whilst our season has not been as challenging as other areas, the cattle are showing the profit making traits we are striving to breed into them, ease of doing, early growth and the ability to meet market specifications with high MSA scores.

We look forward to presenting these cattle to you at our field day and on sale day. If we can assist in any way please don't hesitate to contact us. We hope you enjoy browsing this catalogue and are sure you will enjoy inspecting the cattle in person even more.

Allan & Heather Morgan

BREEDPLAN EXPLANATION

EBV's are provided for the following traits...

SS	Scrotal size is an indicator of male fertility in regards to semen quality and quantity. SS is also positively associated with female fertility.
Birth Weight	The lower the birthweight EBV, the lighter is the birthweight potential of the progeny.
Genetic Milk	Reflects extra calf weight at weaning due to the genetic influence a sire has on his daughters milking and mothering ability.
200 Day Weight	Indicates the relative weight advantage of a sire at 8-10 months of age.
400 Day Weight	Indicates the relative weight advantage of a sire at yearling age.
600 Day Weight	The best single estimate of an animals genetic merit for growth beyond yearling age.
MWT	Mature Cow Weight is an estimate of the genetic difference in cow weight at 5 years of age.
CWT	Estimates the genetic difference in carcass weight and is adjusted to 650 days of age.
Fat Depth	Bulls with negative (-) EBV's for this trait are expected to produce relatively leaner progeny than bulls with positive (+) EBV's.
EMA	Bulls with positive (+) EBV's for this trait are expected to produce more muscular progeny than bulls with negative (-) EBV's.
Retail Beef Yield	Bulls with larger EBV's are expected to produce progeny with higher yielding carcasses.
Intramuscular Fat %	Positive EBV's indicate likelihood of more intramuscular fat.
Accuracies	The accuracy provides a measure of the reliability of the EBV. The higher the value, the less likelihood of the EBV changing with the addition of more performance records on the animal.
Selection Indexes	An index ranks an animal for single production goal - profit. They take the hard work out of knowing how much emphasis to give each of the available growth, maternal, carcass and fertility EBV's when selecting parent animals. An index is a composite EBV of traits best suited to a particular production system and target market.

There are currently four different selection indexes calculated for Australian Hereford animals. These are: Southern Self-Replacing Index; Southern Baldy Maternal Index; Northern Self-Replacing Index; Northern Baldy Terminal Index. Each selection index describes a different production/market scenario and relates to a typical commercial herd using Hereford bulls. Producers are advised to use the selection index that most closely aligns to their production system. All four selection indexes are focussed on maintaining and improving eating quality. Significant premiums are applied for increasing marble score up to a marble score of 3. Pressure is also applied to early life growth to maintain low ossification scores and good MSA compliance. In addition, each selection index targets the following specifications.

Southern Self-Replacing Index: Estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing straight bred Hereford herd targeting the domestic market. Daughters are retained for breeding and so maternal traits are of importance. Steers are slaughtered at 20 to 22 months of age to produce 300 kg carcasses with 10 mm P8 fat depth. A moderate cost is applied for cow feed costs during the annual feed shortage period.

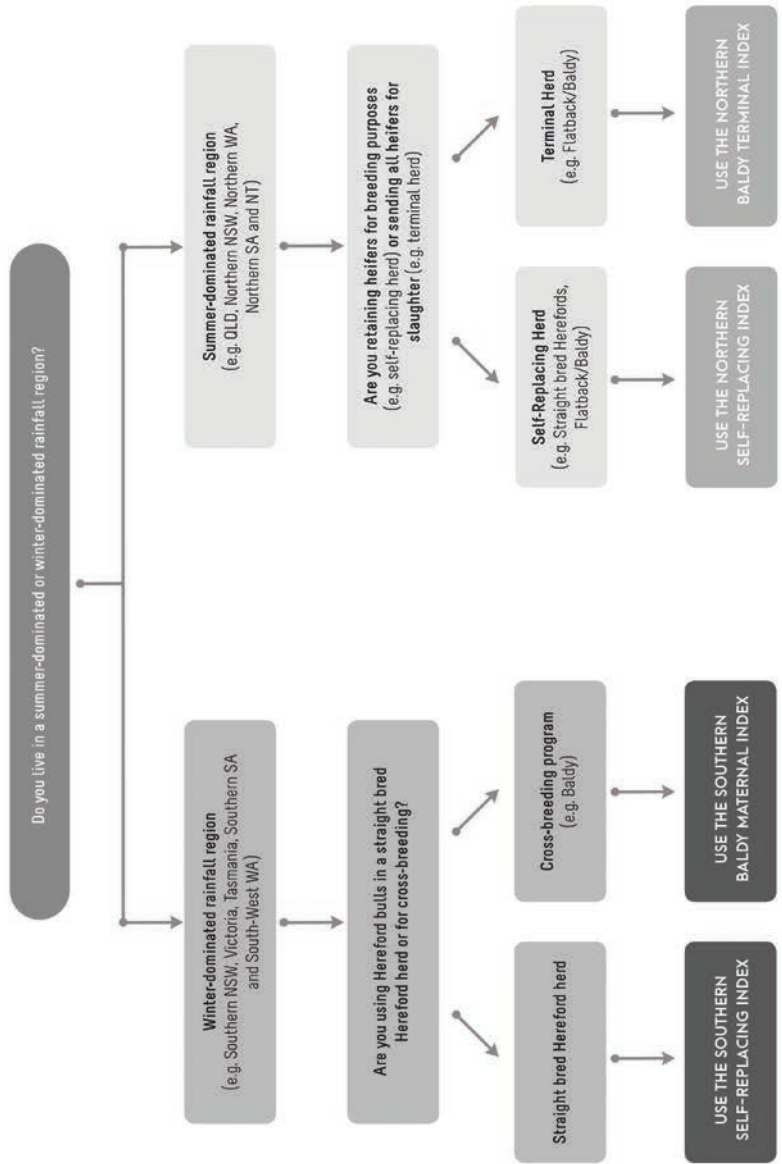

Northern Self-Replacing Index: Estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing herd targeting the domestic market. This index is suitable for use by both straight bred Hereford herds and in crossbreeding programs where Hereford bulls are being used over a Bos indicus based cow herd (e.g. flatback). Daughters are retained for breeding and so maternal traits are of importance. Steers are slaughtered at 20 to 22 months of age to produce 340 kg carcasses with 12 mm P8 fat depth. A high cost is applied for cow feed costs during the annual feed shortage period.

Southern Baldy Maternal Index: Estimates the genetic differences between animals in net profitability per cow joined in a commercial crossbred herd using Hereford bulls over Bos taurus females (e.g. Angus). A portion of the heifers are retained for breeding and so maternal traits are of importance. The steers and surplus heifers are destined for slaughter at 20 to 22 months of age. Steers produce 300 kg carcasses with 10 mm of P8 fat depth, while heifers produce 270 kg carcasses with 12 mm of P8 fat depth. A moderate cost is applied for cow feed costs during the annual feed shortage period.

Northern Baldy Terminal Index: Estimates the genetic differences between animals in net profitability per cow joined in a commercial crossbred herd (e.g. flatback) using Hereford bulls over Bos indicus/Tropical females (e.g. Santa Gertrudis) where all progeny (male and female) are destined for slaughter. Steers and heifers are slaughtered at 20 to 22 months of age. Steers produce 340 kg carcasses with 14 mm of P8 fat depth while heifers produce 300 kg carcasses with 17 mm of P8 fat depth.

BREEDING OBJECTIVES

Morganvale's breeding objective is to breed bulls that are fully described and have genetics and physical ability to meet market specifications and client's breeding objectives. A balance is required where the herd is self replacing with a high fertility and efficiency of the female portion being critical.

Strategies to achieve this objective

- All cattle run under commercial conditions
- A moderate birth weight with optimum growth, carcass quality and muscularity that meet market specifications
- Performance test to accurately describe the cattle genetic merit whilst maintaining structural soundness.

PERFORMANCE POINTERS \$ INDEX

These indexes are designed to allow balanced selection for various market end points. This technology applies various weightings to the potential 17 EBV's now available to give a single value for an animal to your breeding objective in dollar terms. They rank animals for a simple goal - **profit**.

They apportion the amount of selection pressure that needs to be applied for growth, maternal, carcass and fertility traits to give you the most profitable herd. High indexing animals will rarely have the highest EBV for any single trait. The weightings depend on the economic importance of traits and for antagonisms between traits.

BIRTH WEIGHT: BULLS FOR YOUR HEIFER PROGRAM-H

At Morganvale we weigh and record all calves at birth. You will notice that a number of sires marked with an H, this indicates we consider this sire suitable for a heifer joining program. This came from not only a structural observation but a Breedplan EBV and natural birth weight that incorporates all of the sire's contemporaries. Many other studs in our industry don't weigh calves. They claim a bull with a low performance (600 day growth) will also have a low birth weight – this is not the case. We strive for low to moderate birth and increased growth weights.

For an overview of the Breedplan EBV performance see page 5.

COMPARING BULLS

The logic of genetic improvement is that selection decisions are based on differences – in reality it is not how different bulls appear to be but how different their progeny will be that is important.

How you measure the differences dictates how much genetic improvement you make

- Visual Assessment - tells you what you think is there
- Scans - tell you what is there, but not how it got there
- EBV's - tell you how much of what's there will be passed onto the progeny.

Can't make the sale?

Register in just seven easy steps and log onto AuctionsPlus to bid from anywhere on your phone, tablet or desktop.

1

REGISTER ONLINE

FREE once off registration for all auctions.

2

VIEW CATALOGUE

Stock history, photos, videos, pedigrees and more .

3

LIMIT BID

Can't make the auction? Set your maximum bid prior to auction and let the system bid for you.

4

ENTER AUCTION

Log into the auction anytime, anywhere and bid on your mobile, tablet or computer.

5

CONTACT SELLER

Contact selling agent to arrange payment and delivery.

6

PAYMENT

Via the selling agent's terms and conditions.

7

DELIVERY

Arrange transport of livestock at your expense.

**Contact AuctionsPlus on (02) 9262 4222
www.auctionsplus.com.au**

LOTS 50-54: BLACK SIMMENTALS

BLACK SIMMENTAL

Morganvale purchased our first foundation females in 2012 with the aim of offering commercial clients a source of genetics for cross breeding. Black Simmentals offer many advantages for this purpose, as well as the usual hybrid vigour effect they also have calving ease, longevity, high maternal traits and high carcase traits. For the traditional breeders of black coated animals they maintain coat colour whilst providing all the advantages.

Our breeding objectives remain the same as the Poll Hereford herd. All females are expected to be fertile and rear a robust calf.

We have a strong focus on carcase traits and place importance on muscle and fat EBVs.
