BANEMORE'S GENETIC AUDIT JANUARY 2020 HEREFORD GROUP BREEDPLAN

GRAPHS OF BANEMORE STUD HERD COMPARED WITH BREED GENETIC TRENDS

THE HISTORY OF BANEMORE HEREFORD STU

The "Banemore" Hereford Stud is an offshoot of the well-known "Nayook" Stud, Mt. Gambier, S.A. In January 1981 the Nayook Stud and Herd were dispersed, and David and Judi Jenkin brought two thirds of the Nayook Stud to Banemore. The stud breeders in Banemore now total 200.

The Nayook Stud was founded in 1956 with the purchase of foundation females from the first South Boorook sale. Females were then purchased from Muduney, Loralong (a direct offshoot from Ardno), Midgeon and Appleton.

2000 – Semen package of Courallie Pompeii purchased together with Courallie Tacoma.

2001 – Purchased semen package of Injemira Grand National U570 (top price at Injemira sale and purchased by Courallie). A 1/4 interest of Wolbull Cannon (Poll Hereford) was purchased. This bull is a real curve bender with +1.0 for BWT, +21 for Milk, +73 Final WT & +4.2 for EMA. Eulameet have possession of Cannon.

The 2000s saw the introduction of Poll Hereford genes, including from Pine Hill Erich, South Bukalong Wallace and South Bukalong Shannon.

2008 – Embryo program carried out with donor sire Koanui Rocket.

2008 – AI Program – Poll Hereford bulls used were Wirruna top performing curve benders Wirruna Abercom and Wirruna Abracadabra.

2009 – Semen package of No. 1 indexing bull Wirruna Commander (by Koanui Rocket) was used. The bull Wirruna Commander was leased for the mating period to join to our great line of poll heifers.

2011 – Banemore and Richard Archer (Quamly Plains, Tas.) purchased sire Wirruna Callan C26 for \$18,500. Callan C26 is a proven four-year-old homozygous sire.

2012 – AI sires included Allendale Waterhouse, Wirruna Daffy D1 and Wirruna Echuca E99.

2013 – AI sires included Yavenvale GURU (top price 2013 sale) and Wirruna Flannigan.

2014 – AI sires included Allendale Anzac, Banemore Echuca H16 (P) & Wirruna Hernando H47 (P).

2015 – Semen from AI sires purchased from Mt Difficult dispersal and Kaye Payne at Elite.

2016 – AI sires included Wirruna, Kalimna, K327, Wirruna Fort, Allendale Anzac and Yavenvale Kahuna.

2017 – AI sires included Wirruna Fort, Wirruna Kalimna, K327 and Injerima Anzac H006.

2018 – AI sires used were Wirruna Manton WNAM126, Wirruna McLaren WNAM175 and Super Sire Wirruna Matty WNAM288.

2020 – Banemore Stud Dispersal Sale.

ACHIEVEMENT HIGHLIGHTS

2019 – Nev Flo (Young family), Kevin and Ben Mibus, and Alan and Debbie Millard all sold Banemore bred steer weaners at average \$1000+.

2018 – Jan and Judi Marshman sold Banemore bred steers for \$1240 (376c per kg).

2018 – Nayook South sold 94 steers at average \$1029.

2017 – Nayook South sold 134 steers at average \$1100.

2017 – Banemore were finalists in the Stock & Land Heifer Challenge.

2017 – Alan and Debbie Millard topped the Casterton Hereford weaner sale with \$1395 for Banemore bred weaners.

2016 – Nayook South sold 157 eight-month steers by Banemore progeny for an average of \$1311.

1997-2012 – In the Hamilton Beef Expo era Banemore excelled, consistently winning championships in both Pen of Bulls and steer competitions.

2013 – Banemore joins two other herds for 5 star Breedplan completeness.

2003 – Progeny of Banemore Pompeii top sale prices and averages at Yanenvale and Courallie, selling to \$15,000.

1997 – Winners in the Seedstock Producers of the Year competition, south western division.

WELCOME TO BANEMORE

It is with pride that we present the Banemore Stud herd for dispersal. This is an opportunity for progressive Hereford breeders to continue the pathway of genetic improvement that the Jenkin family has striven for over the past 50 years. With new breeding tools, such as Genomics, a more advanced Breedplan and DNA technology, the improvement will continue to be even more spectacular.

We wish to acknowledge many people, who over the years have encouraged our aim of breeding better Herefords: the extended Jenkin family, Nayook; Ted Campion, Marcus Oldham College; Ron McNeil, SA Department of Agriculture; John Garnoch, South Bukalong; the Yelland family, Glentrevor; Jim Gough, Coora; Bob Freer, Herefords Australia; Bruce Knee, DPI; Ian Lock, Wirruna; Pat Pearce, Yavenvale; Ben Glatz; Landmark, Casterton; and many satisfied clients.

The Jenkin Family Partnership

David, Judi, Jonathan, Jo, Eve and Leo

Thank you for your interest in the Banemore Breeding Program.

We value your support.

BANEMORE'S BREEDING AIMS

Produce practical, easy-care, commercial Poll Herefords that will adapt to paddock and feed lot conditions and maintain good structure. Average birth weight, sufficient milk, high fertility, high yearling and 600-day growth with high yielding carcasses. Current priority is maximum calving ease and IMF while maintaining high yielding and high growth rates.

AWARDED ★★★★★ STAR BREEDPLAN COMPLETENESS

The 'Completeness of Performance' herd rating has recently been introduced to assess the quantity of pedigree and performance information that has been submitted to breedplan by individual stud herds. A simple 1-5 scale star rating is calculated based on the proportion of calves and number of performance traits recorded. Herds with 5 star rating are considered to be gold standard and are recording 'Complete Performance information'.

NOTICE TO BUYERS

1. All females (excluding yearling heifers) are PTIC including re-pregnancy testing on 13th February 2020. Note that all PTIC females offered were first calved at two years of age.
2. All PTIC Females are Autumn calving excluding lots 90-101 which are Spring calving.
3. The bulls have all been reared on their own dams with no creep feeding. Bulls were supplemented with only hay over the winter months and in preparation for the sale. Silage and light concentrate ration was commenced on 10/01/2020.
4. None of the cattle offered have been hoof trimmed.
5. All cattle are accredited TB free and Brucellosis free and all sale animals tested Pestivirus free.
6. Cattle purchased for interstate destinations will be held at Banemore free of charge until regulation tests and trucking arrangements can be made. The sale to be cancelled in the event of any animal failing tests.
7. All bulls on 20/12/2019 have been independently assessed with Testicle circumference measured and consistency evaluated. Bulls were also assessed for structural soundness.
8. The Banemore Herd is accredited for Beef Only Johnes free status, E.U. and MSA.
9. Lots 33 and 38 are eligible for registration at buyers expense.
10. EBV shadings on rising two year old bulls and yearling bulls represent top 20% of breed.
11. Lot 127 (P082) on date of print pedigree had not been verified. Please note this bull was used as a yearling.
12. All animals offered have had a low density genotype DNA test for parentage and genetic faults. Full details of individual test results can be found at herefordsaustralia.com.au.

FOETAL AGING

Foetal aging was conducted on 17th September 2019 by Livestock Logic veterinarians. Based on estimated foetal age we have allocated the most likely sire of the calves in utero. The foetal aging was deliberately done early in pregnancy to increase the accuracy of determining the sire of the calves and whether or not the cows/heifers conceived to the AI program. Please note that estimated outcomes are not guaranteed. Where foetal aging was inconclusive, this has been outlined in the mating details.

Andrew Whale BVSc, Livestock veterinarian
Livestock Logic 03 5572 1419
60 Portland Rd Hamilton VIC 3300

CATEGORY DEFINITIONS

| | |
|------------|--|
| H# | Registered Hereford with Poll Genes |
| P | Poll Hereford |
| PP | Homozygous Polled |
| HPR | Hereford Performance Registered - straight-bred Hereford cattle not eligible for registration within the HBR and are Breedplan recorded. |
| S | Scurs |

The Hereford GROUP BREEDPLAN Estimated Breeding Values contained in this Sale Catalogue were compiled by the Agricultural Business Research Institute (ABRI) from data supplied by the breeders. Neither the Australian Hereford Society nor the ABRI oversee or audit the collection of this data.

SALE ARRANGEMENTS

SALE TYPE AND INSPECTION

The sale will be conducted by video auction in conjunction with AuctionsPlus. Cattle will be yarded and available for inspection from 10am.

TRANSPORT

Stephen Smith of Dick Smith Transport will be available to coordinate and take delivery instructions on sale day. He can be contacted on 0482 636 236. Please note that there is no freight rebate to be paid by the vendor. All freight cost will be at the purchases expense.

REBATE

Rebate 2% to outside agents introducing buyers prior to the commencement of the sale. For agents not in attendance but settling accounts on a clients behalf a 1% rebate will be given.

GROUP BREEDPLAN EXPLANATORY NOTES

Only Hereford GROUP BREEDPLAN EBVs with Accuracies (Acc.) can be validly compared between herds. Within-herd EBVs from Hereford BREEDPLAN cannot be used to compare between herds.

Estimated Breeding Values (EBVs): EBVs for the growth traits are calculated in kilograms. The EBV is the best estimate of an animal's genetic merit for that trait.

Accuracy: An accuracy is presented with every EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy the lower the likelihood of change on the animal's EBV as more information is analysed for that animal or its relatives.

EBV DEFINITIONS

Calving Ease (CE): EBV's are based on CE scores, birth weight and gestation length information. More positive EBV's are favourable and indicate easier calving.

DIR: Direct calving ease indicates how this animal influences the birth of its progeny.

DTRS: Daughters calving ease indicates how well the animal produces daughters that have easier calving.

Gestation Length: GL EBV (days) is based on AI records. Lower (-ve) GL EBV's indicate easier calving and increased growth after birth.

BWT EBV (kg): is based on measured birth weight of animals, adjusted for dam age. The lower the birth weight EBV of a sire, the lighter is the birth weight potential of his progeny and lower the likelihood of a difficult birth. High birth weight is generally associated with increased calving problems in heifers. High birth weight EBV bulls can be used on mature cows without any problems. Banemore recommend joining heifers to bulls with birth weight EBVs at or below breed average.

SS: Scrotal Size EBV (cm) is an indicator of male fertility in regards to semen quality and quantity. Higher(positive) EBVs indicate higher fertility. SS is also positively associated with female fertility.

Birth Weight EBV: Birth Weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age.

200 - Day Milk EBV: (kg) is an estimate of an animals milking ability. For sires, this EBV is indicative of their daughter's milking ability as it affects the 200 day weight of their calves.

200 - Day Growth EBV: (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400 - Day Weight EBV: (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600 - Day Weight EBV: (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

EMA: Eye Muscle Area EBV (cm²) estimates genetic differences in eye muscle area at the 12/13th rib site of a 300kg dressed carcass. More positive EBVs indicate better muscling on animals.

Rib: Rib Fat EBV (mm) estimates the genetic differences in fat depth at the 12/13th rib in a 300kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

Rump: Rump Fat EBV (mm) estimates the genetic differences in fat depth at the P8 site of a 300kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity. Two fat EBVs are listed as there is variation between animals regarding fat depth at the two sites.

IMF: Intramuscular Fat Percent: The IMF% EBV (%) is an estimate of the genetic difference in the percentage of intra-muscular fat at the 12/13th rib site in a 300kg carcass. Depending on market targets, larger more positive values are generally more favourable.

SELECTION INDEXES

Four new Herefords Australia version 6 Breed Object selection indexes were released in mid-October with the publication of the October 2019 Hereford BREEDPLAN analysis. Each of the new selection indexes describes a different production/market scenario and relates to a typical commercial herd using Hereford bulls. Producers are advised to use the selection index that most closely aligns to their production system.

Southern Self-Replacing Index – Estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing purebred Hereford herd targeting the domestic market. Daughters are retained for breeding and so maternal traits are of importance. Steers are slaughtered at 18 months of age to produce 300 kg carcasses with 10 mm P8 fat depth. A moderate cost is applied for cow feed costs during the annual feed shortage period which results in small increases in cow weight.

Northern Self-Replacing Index – Estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing herd targeting the domestic market. This index is suitable for use by both straight bred Hereford herds and in crossbreeding programs where Hereford bulls are being used over a Bos indicus based cow herd. Daughters are retained for breeding and so maternal traits are of importance. Steers are slaughtered at 18 months of age to produce 340 kg carcasses with 12 mm P8 fat depth. A high cost is applied for cow feed costs during the annual feed shortage period which produces little change in mature cow weight.

Southern Baldy Maternal Index – Estimates the genetic differences between animals in net profitability per cow joined in a commercial crossbred herd using Hereford bulls over Bos taurus females (e.g. Angus). A portion of the heifers are retained for breeding and so maternal traits are of importance. The steers and surplus heifers are destined for slaughter at 18 to 19 months of age. Steers produce 300 kg carcasses with 10 mm of P8 fat depth, while heifers produce 270 kg carcasses with 12 mm of P8 fat depth. A moderate cost is applied for cow feed costs during the annual feed shortage period which results in small increases in cow weight.

Northern Baldy Terminal Index – Estimates the genetic differences between animals in net profitability per cow joined in a commercial crossbred herd using Hereford bulls over Bos indicus females (e.g. Santa Gertrudis) where all progeny (male and female) are destined for slaughter. Steers and heifers are slaughtered at 18 to 19 months of age. Steers produce 340 kg carcasses with 14 mm of P8 fat depth while heifers produce 300 kg carcasses with 17 mm of P8 fat depth.

A Note on Semen Testing

As with any species, fertility can be a problem. This is why Banemore semen test all rising two year old sale bulls.

Bulls are examined by Nationwide Artificial Breeders for abnormalities including warts, penile fraenum and erection issues, as they undergo a physical examination of external genitalia and conformation.

The crush side test involves analysis of spermatozoa for motility, concentration, morphology and semen infections. This information provides testicular and epididymal function which helps predict the potential fertility of the bull. Only bulls that pass are certified and made available for sale.

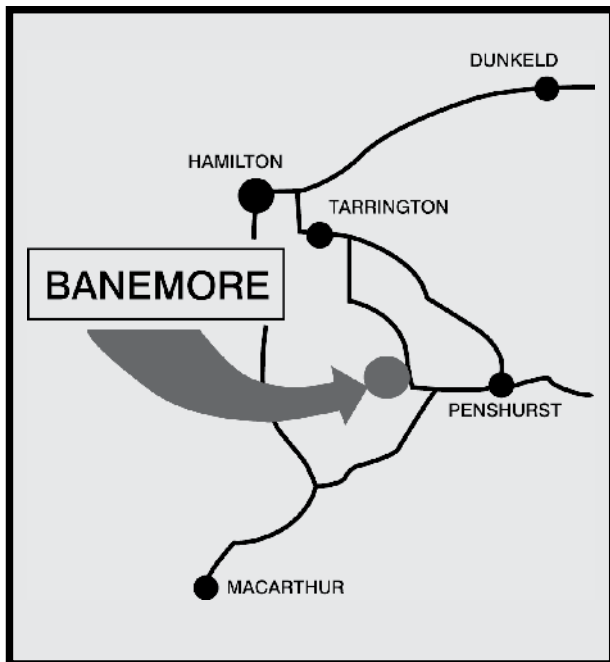

A satisfactory result gives a high chance of fertility HOWEVER, please observe your new bull in action when first in service, complete with a thrust!! Stress of an animal can also affect fertility. Look after your bull! The most conscious producer will semen test all herd bulls, every year, before joining.

For any questions contact Drew Pickford, Nationwide Artificial Breeders Pty Ltd. Ph: 0428 925 255.

- **Drew Pickford: Nationwide A.B.**

The Banemore Partnership wish to acknowledge Herefords Australia, SpecPrint Hamilton and Ben Hooper - Clear Vision Imaging for compiling the pedigree and breedplan data in this catalogue.

Tear along dashed line

DIRECTIONS:

From Hamilton: Take the Penhurst Road, turn right on the Yatchaw Road 2kms east of Tarrington and follow the "Sale" signs 14km to "Banemore".

From Penhurst: Proceed on the Penhurst-Macarthur Road for 8 kms and follow the "Sale" signs to 992 Twomeys Bridge Road.
