

Welcome...

2020 has started in an extremely positive manner particularly for The Dulverton Team at Shannon Vale, Glen Innes. We received over half of 2019's total rainfall in the first three weeks of January and while there is a long, long road ahead, at least we have a start.

As a result of the three well below average rainfall years 2017-2019 over a huge expanse of our "Mighty Continent"- the Driest on the Planet in any case, Cow Numbers have declined to levels well below fifty percent of their pre 2017 levels in most Geographic Regions.

It's an irony I guess, as our ability to supply Beef from Australia has been eroded by devastating seasons, world demand for Protein has been growing at a rate beyond the most seasoned Pundits Predictions. Swine Flu of course adding substantially to this world requirement for protein, the void created by Swine Flu is being witnessed in not only China but also Korea, Malaysia, Japan, The Philippines, Indonesia etc. Demand for Beef is definitely outstripping the Beef Exporting Nation's current capacity to supply. Note that Brazil is slaughtering unprecedented numbers of young females at light to very light carcass weights. The implication being that Brazil's ability going forward to assist "Fill the Demand Void" particularly in the "Manufacturing Spectrum" is being reduced.

The Politics re the USA/China Trade Agreement have yet to be played out. Suffice it to say China will continue to need huge volumes of frozen Beef (Infrastructure/Logistics issues with handling Chilled) the USA Industry isn't geared to frozen in the same way Australia and the South American nations are.

Indian Buffalo certainly has a spot in the "Bottom end" protein market throughout Asia. Indian Buffaloes ability to fill a void in the "Manufacturing Market" in China particularly, will depend upon the two largest producing States achieving FMD free status.

Beef "The King of the Proteins" the preferred meal ingredient component, as distinct from The Commodity end protein is also experiencing unprecedented demand with worldwide supply struggling to satisfy this "Top End" market ingredient. Wagyu and 150 day plus Grainfed mostly Angus (Marble Score 3 requirement) will be sort after in this segment. This product is preferred as chilled so the USA will continue to be a major competitor particularly in China.

The scene is set; Demand for Beef is far outstripping demand on the world scene.

The Challenge for we Aussies is to get active particularly in areas where these Mini Breaks have occurred and Re-Build the hugely depleted Cow Herd.

For we Seed Stock producers that means catering for the Commercial Clientele's requirements.

First and foremost, it would appear to Sal n I that this first need will be for Calving Ease herd sires with adequate Growth to fulfill important "Productivity" needs from Maidens:

* Live Healthy Calf

* Adequate Growth to satisfy joining weights 300-330kg at 14 mths; Feeder steer target weights; Slaughter target weights

* Built in Value Determining Traits- a) Maternal Longevity b) Nett Feed Efficiency c) RBY d) Eating Quality (Marbling IMF%)

The Theme for the Dulverton Dynamic Damsel Sale is to Rebuild the Cow herd. The Seed Stock Producer must help here by acknowledging lots of heifers/maidens will need joining so Calving Ease needs be a major priority.

Thanks again to all for putting in a great effort over such a tough year. Sal, Tim, Fiona, Phil and Lucy you all go above and beyond, thank you.

Chaps and Sal

See www.dulvertonangus.com.au for more information

SALE INFORMATION

Inspection

All stock will be penned at Shannon Vale Station from 9am Sale Day, or private inspections can be arranged any time prior to the sale by appointment with the agents or vendors.

Insurance

Will be available on Sale Day, please speak to one of the Colin Say & Co representatives.

Rebate

2% rebate available to outside agents introducing potential purchasers in writing 24hrs prior to sale and settle for purchases within 7 days of receipt of invoice.

Morning Tea & Lunch will be provided from 9am Sale Day.

Health

All females catalogued have a J-BAS score of 7.

Vaccination Program:

All females have been inoculated with

- 7 in1 at weaning plus an annual booster in March 2020.
- Selovin yearly injection administered March 2020.
- Oral Fasinex 240 administered March 2020.
- Cydectin Pour-on administered March 2020.
- Pestiguard vaccination given March 2020.

Fertility

The heifers and cows have been foetal aged by Hannah Pope of Glen Innes Veterinary Hospital to determine whether the females were in calf to the AI or paddock sire. The detected sire has been shown in the comments as well as an average of the Predicted EBVs for the progeny. There are no guarantees that every calf will be by the foetal age sire.

Mating Predictor EBVs

Please note that the Expected average progeny values are provided to assist breeders estimate the outcome of particular mating combinations. These values are NOT GROUP BREEDPLAN EBVs and should not be published as such. The actual EBVs for any progeny resulting from a particular mating are likely to vary from the expected average values.

Structural Soundness

Structural assessment was carried out by Dick Whale. Dick's assessment assists you improve traits such as length, pastern angle, body capacity etc..

Delivery

We are happy to organise your transport and delivery with local and interstate carriers. Please confirm your delivery details with Greg Chappell or Craig Thomas post Sale.

Registration

All registered stock as stated in the catalogue are eligible for transfer at the vendor's expense. Please ensure correct name, address. Herd Ident and PIC (Property Identification Code) is printed on the Buyer's Instruction Slip supplied in this catalogue.

Notice to Buyers

All lots will be sold subject to the usual conditions governing auction sales.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA

SV : the sire has been verified by DNA

DV : the dam has been verified by DNA

: DNA verification has not been conducted

E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

BIRTH		FEED EFFICIENCY	
Calving Ease Direct	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
Calving Ease Daughters	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
Gestation Length	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
Birth Weight	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
GROWTH		TEMPERAMENT	
200 Day Growth	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
400 Day Weight	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
600 Day Weight	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
Mature Cow Weight	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
FERTILITY		STRUCTURE	
Days to Calving	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
Scrotal Size	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
CARCASE		SELECTION INDEXES	
Carcase Weight	kg	Genetic differences between animals in hot standard carcase weight at 750 days of age.	Higher EBVs indicate heavier carcase weight.
Eye Muscle Area	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate larger eye muscle area.
Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more fat.
Rump Fat	mm	Genetic differences between animals in fat depth at the PB rump site in a 400 kg carcase.	Higher EBVs indicate more fat.
Retail Beef Yield	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcase.	Higher EBVs indicate higher yield.
Intramuscular Fat	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more intramuscular fat.
Intake	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed eff
	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temper
Front Angle	%	Genetic differences between animals in desirable front foot angle (strength of pastern, depth of heel).	Higher EBVs indicate more desirat structure.
Front Claw	%	Genetic differences between animals in desirable front foot claw set structure (shape and evenness of claw).	Higher EBVs indicate more desirat structure.
Rear Angle	%	Genetic differences between animals in desirable rear foot angle (strength of pastern, depth of heel).	Higher EBVs indicate more desirat structure.
Hind	%	Genetic differences between animals in desirable rear leg structure when viewed from behind.	Higher EBVs indicate more desirat structure.
Side	%	Genetic differences between animals in desirable rear leg structure when viewed from the side.	Higher EBVs indicate more desirat structure.
Feeding	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems.	Higher selection index values indic greater profitability.
Index	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade.	Higher selection index values indic greater profitability.
Gain	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 200 day feedlot finishing period for the grain fed high quality, highly marbled markets.	Higher selection index values indic greater profitability.
Ass	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers.	Higher selection index values indic greater profitability.

**DULVERTON ANNIE M10 - A STAND OUT COW!**

Dulverton Annie M10 is the stand out 'older cow' in draft. A Gun Smoke J134 out of an outstanding Booroomoka Frankel F510 heifer. She is a heifer's first calf born unassisted (goes without saying) and born very early, fitting with our theme re Calving Ease to assist with the National Herd Rebuild. She is structurally sound as a 'bell'.

Her pedigree also boasts some of the most pre-potent calving ease sires we have used, including R.R Scotchcap 9440, Rock n D Ambush 1512, O'Neill's Crusader, Dulverton Texas T15. One of the other 'greats' in her pedigree is Dulverton Uptake U91, his contribution being strong in structural soundness, growth, fertility, feed efficiency and retail beef yield.

Dulverton Annie M10 has fulfilled our expectations re her ability to pass on the gene combinations to satisfactorily fulfil the four Value Determining Traits including:

- Maternal Longevity
- a) Calving Ease CED Top 30%, CEM Top 40%, Gestation Length Top 2%
- b) Fertility Days to Calving Top 30%, Scrotal Top 40%
- NFI-F Top 45%
- RBV Top 45%
- IMF% Top 45%

She is also in the Top 8% for all 4 indexes including Top 2% for the Heavy Grass Index.

Dulverton Annie M10 is an extremely exciting prospect. She has produced two calves. Her first calf Annie P342 by Dulverton Musgrave M21 weaned at 268kg for a Daily Gain of 1.42kg/day, Ratio 117 in her group of 24. Dulverton Annie P342 weighed an extremely creditable 373kg at joining, she was Al'd to Chiltern Park Moe and has definitely been retained in the stud. Dulverton Quasser Q173, Dulverton Annie M10's second calf by Dulverton New Approach N56 weaned at 202kg for a gain of 1.56 kg/day Ratio 96, there were 19 in the group.

In keeping with our desire to mate her to a Dulverton Homebred sire we will offer her with two (2) straws of Dulverton New Approach N208, he will be on display on Sale Day.

Top 10% all 4 indexes, Top 50% all 4 Value Determining Traits. Ideal skin and hair. Depastured with Dulverton Peter Pan P096 until 12/12/19 then Dulverton Peter Pan P171 until 14/1/20. PTIC NGCP096. Grade 5.

Q297 - Star Lot! Everything about her is near perfect, from pedigree through performance to phenotype. She's by Dulverton Medaglia M28, awesome pedigree (Gun Smoke x B. Frankel) through performance to undeniable structural soundness, out of the Queen herself F23. Q297 ratioed top in her group of 27 for growth. Grade 5.

At our inaugural Female Production Sale in 2018 we did offer Dulverton Queen F23 as our Star Attraction. She is our best ever daughter of Nichols Extra K205, and dam of Dulverton Herbert H8, the best young sire we have bred from a maiden heifer. However she was passed in and retained in stud.

Dulverton Queen Q297, F23's daughter, does have an extremely potent maternal pedigree with both Queen A257 (Dulverton Uptake U91) and Queen Q31 (Burthlene Patriot) having reared 10 performance recorded progeny.

Dulverton Uptake U91 has few rivals when it comes to 'Stayability'. He was still breeding naturally at Dulverton as a 12 year old and his male progeny have the physical attributes plus that all important "will to live" that makes them a success in the Central and Central Northern environments of Queensland.

Dulverton Queen Q297 is by Dulverton Medaglia M28 who has bred well to date. Note the Q's are his first crop, with Q297 his top performing heifer. She weaned at 210kg (109 days) for a gain of 1.93 kg/day Ratio 127, first in a group of 27 head. M28 did produce not only the heaviest male weaner Dulverton Quantum Q59 at 270kg (159 days) and the highest daily gain male performer of the drop Dulverton Quantum Q314 at 2.00 kg/day Ratio 119, number in group 25, but he also produced the highest daily gain female performer of the drop Dulverton Queen Q297 as above. The heaviest female weaner overall is Dulverton Wilcoola Q74 who sells as Lot 64, she weighed 273 kg for a daily gain of 1.76 kg/day, Ratio 116, number in group 27. Wilcoola Q74 is by C. Gun Smoke J134.

Dulverton Queen Q297 is really well made, stand out structure is a trait both parents excel in. Q297 has ideal skin and hair, she exhibits our preferred flat, minimal bone yet still has plenty of natural constitution as evidenced by her adequate chest floor, body depth and thickness.

Dulverton Queen Q297 is in the Top 50% for three of the four Value Determining Traits and Top 10% for 200 day growth, a trait of utmost importance in these uncertain seasonal times. Achieving functional establishment early in the life of cattle so important to their lifetime performance.

You might ask why we are so 'High' on Q297 when she is born so late. Well there is a reason for her late arrival, in 2018 we did embryo transplant Dulverton Queen F23 and then joined her naturally to M28, the ole' girl strutted her stuff and went straight back in calf following her ET, we would consider that to mean Dulverton Queen Q297 has been born early, well at least in the first cycle re exposure to the bull.

No doubt in our minds Q297 is a true champion and worthy of being singled out.

Q74. Magic heifer. Doability, skin and hair type, and capacity at her age is very special. Calving ease an absolute plus, her dam, K4 combines two bulls who definitely worked for us BB Debonair D34 & D. Feature F221 (worked for Tony Seymour too). Top 50% for 3 of the 4 Value Determining Traits. Ratioed 116 for weaning growth in her group of 27, 2nd only to Q297. Grade 7.

There is no denying the powerful job Carabar Gun Smoke J134 has done for us, he is an all round sire. His male progeny have excelled and his daughters certainly have few superiors.

Gun Smoke J134's youngest representative in the sale is Dulverton Wilcoola Q74 may well be his best yet. She is a striking individual with ideal skin, hair, body capacity, evenness of fat distribution, neck extension plus shoulder angle and set. Her temperament is exemplary. To finally decide to offer Q74 created much angst, note we are committed to the concept of offering as many 'Topliners' as possible. The agony brought about by the fact that Q74 was our heaviest weaner recording an amazing 273kg at 155 days for a gain of 1.76kg/day, Ratio 116, N=26.

Her EBV's are striking from super Calving Ease, Birth Weight to 600 day relationship, Fertility, NFI-F to IMF%. Note she is in the Top 30% for all 4 Indexes.

Wilcoola Q74 is certainly an exceptional way to top off the Dynamic Dulverton Damsels Sale, don't miss inspecting her.
