## Kills the parasites that count

The two unique models of Dectomax<sup>®</sup> Injectable and Dectomax<sup>®</sup> Pour-On give you two powerful choices to control the parasites that count, including the five major worms, lice, cattle tick and buffalo fly.\* Both models have the active doramectin that makes the difference. It's the broad spectrum efficacy and persistent days of activity against the key internal parasites that makes the difference with Dectomax.

Dectomax provides for protection for your cattle, with fewer treatments and reduced pasture contamination. It also has no adverse effect on dung beetle populations.<sup>1-2</sup>

### Dectomax Pour-On

The reliable all-rounder provides protection against the worms that count.

- Convenient, easy to administer
- Persistent activity against the 5 major worms
- Nil milk withholding period
- Rainfast
- Meat withholding period of 42 days
- Export slaughter interval of 42 days

**NIL MILK  
WITHHOLD  
PERIOD**

### Dectomax Injectable

This high performance model provides injected performance where it's needed.

- Reliable dosing, every time
- Persistent activity against the 5 major worms
- Controls cattle tick for up to 28 days
- Low irritant formulation, easy to administer
- Meat withholding period of 42 days
- Export slaughter interval of 42 days.

# Welcome Message

*Dear Fellow Cattle Breeders.*

Welcome to our 18<sup>th</sup> Southern Sale

On behalf of southern Charolais studs we are pleased to present a quality yarding of top end working age bulls and females for sale. As a committee we have put together over 30 bulls to enable clients to have a large selection to satisfy requirements for their own operation. The bulls are industry focused for vealer production so buyers can value add to the silver calf advantage. This year has also seen the addition of Auctions Plus available for online bidding for those who cannot make it to the sale on the day.

The Charolais breed has again asserted itself firmly as the ultimate cross breeding choice. Calves have consistently weaned early and heavy, hitting weights and returning profit on investment for a good bull.

The bulls available have all been inspected, semen tested and excluded to be persistently infected for pesti virus, so buyers can purchase knowing bulls are ready to work and disease free. Most have EBV's available to assist in your selection.

There is also a small selection of females on offer this year for buyers wanting to expand cow numbers or those wanting to get into Charolais.

I would like to take this opportunity to thank all of the vendors and sponsors for their support in making the sale possible.

We are all looking forward to catching up on Thursday 19<sup>th</sup> March. Bulls will be yarded for inspection by 10AM and also available for inspection prior to the sale by contacting vendors.

*Yours sincerely,*  
**Colin Pickering.**  
*Chairman.*  
**Southern Charolais Breeders Group Sale**

# SALE INFORMATION

## Fertility guarantee:

a) Semen test is optional, however vendors are reminded that it is in their best interest to have their bulls tested within 2 weeks prior to the sale. Bulls are to be sold as fertile and capable of natural service. The purchaser will have the right of cancelling the sale within six months of the date of the sale if they can submit a Veterinary report stating that the bull is infertile or incapable of natural service. The veterinary surgeon must have stated that, in his opinion, the bull has not suffered since delivery to the purchaser, any injury or maltreatment which could have affected its breeding ability. The vendor is liable to refund the purchase price of the animal in full.

b) All females are to be sold as guaranteed breeders. Where a purchaser submits a veterinarian certificate within twelve months of the date of the sale stating that a female of joinable age is infertile and, in the veterinary surgeon's opinion, has not suffered, since delivery to the purchaser, and any injury or maltreatment which could have affected her breeding ability, the Vendor is liable to refund the price in full. This will not apply where an attempt has been made to transfer embryos from the female.

c) Females 24 months and over are to be pregnancy tested in calf or have a calf at foot, vendors must supply a PTIC Certificate for every female entered in the catalogues as PTIC. Females under 24 months may be mated or unjoined.

## Conditions of sale for interstate purchases:

Any animal, purchased for interstate movement, which requires further tests will be forwarded to an approved Quarantine area where appropriate tests will be carried out in compliance with the entry requirements into the destination state. The cost of agistment, transport, and health status tests are to be borne by the purchaser of the all cattle passing such tests, or by the vendor, should they fail to pass such tests. Payment for the cattle to the vendor will be made within normal terms of sale whether or not the cattle have been tested for entry into the nominated state. In the event of cattle failing health tests and the sale being cancelled, the vendor will refund all moneys, paid as settlement, for the purchaser.

## Health:

Each animal must belong in a herd accredited free or confirmed of both brucellosis and TB. A national vendor declaration form must be completed before the sale

All cattle including calves must be tested Pesti Virus negative. Pesti-Virus Laboratory results showing a negative test must be provided to the sale committee 7 days prior to sale day. (\* This will be strictly adhered to).

To be eligible for entry, cattle must originate from:

- A herd with at JBAS Score of 6 or higher

## Inspection:

All cattle must be purebred, registered and correctly tattooed as required by the Charolais Society of Australia Ltd. Cattle will be accepted or rejected on the basis of the Charolais Society of Australia Regulations for Show and Sale.

## Transfer Fees:

Transfer fees are the responsibility of the vendors in accordance with the Regulations of the Charolais Society of Australia Ltd.

## Herd Health Indicators:

Vaccinations are shown in the comments on all animals. All sale animals have been tested Negative for Pestivirus, Vaccinated for Lepto and 5in1.

**Disclaimer:** Information contained in this Sale Catalogue, including but not limited to pedigree, DNA information, is based on data supplied by members and/or third parties. Whilst every effort is made to ensure the accuracy of the information, the Charolais Society of Australia Limited (Society), their officers and employees assume no responsibility for its content, use or interpretation. Data submitted to the Society may have errors in it which cannot be detected without further DNA testing. Technology may have advanced since a particular test was undertaken so that previous inaccuracies which were not detectable are now able to be detected by current testing technology. In the Charolais Herd Book and any related database, the Society estimates approximately 7 - 8% of entries may have an error or may be misleading (i.e. sire verification DNA testing indicates a different parentage to that recorded in the Herd book). For this reason, users ought to consider if they need to obtain independent testing of the relevant animal (if possible) to ensure the data is accurate. The Society is working to bring these errors down.

## Lot 1

AIRLIE CARMELO (A1S C150F)

**Dam: AIRLIE LUNA G783F (A1S G783F)**

AIRLIE LUNA B713F (A1S B713F)

**Comments:** Airlie Pinot is a Full French bull by imported Full French A.I sire Ismael. A scurred bull that is the youngest of our sale draft. He is a bull that will catch your attention for yeild, muscle and softness. He would make an outstanding vealer bull and work well over larger framed cows requiring some yeild and softness. A very sound bull. Pinot sells vet inspected and semen tested.

**Dam: VALLEY VIEW CHIFFON SILVER N2 (AI) (ET) (P) (VLW N2E)**  
 VALLEY VIEW CHIFFON SILVER (AI) (P) (VLW J6E)

**Comments:** Embryo Package 2 A Grade: We purchased straws from Mt William production sale and here is your opportunity to access something special. This mating will bring together all the greats of the breed. Palgrove Hannibal has outstanding growth and carcass ebvs. His progeny have sold exceptionally well for both Palgrove and Mt William, 20 of his sons averaged \$10850 last year and \$19000 in 2017 for Mt William and topped the sale at Palgrove for \$40000. Chiffon Silver N2 is the most impressive daughter to date from J6 sired by the highly regarded LHD Cigar. N2 is a granddaughter of the most noted cow at Valley View charolais, Fernvale Chiffon. Check out the mid parent EBVs of this mating top 10% for Calv ease DTS, Gest length, 200, 400,600 growth, EMA, Rib and Rump Fat and IMF.

5 A grade Embryos  
50% guarantee if implanted  
by an approved ET technician.

January 2020 Australasian Charolais GROUP BREEDPLAN MID PARENT PREDICTION

ROXY'S JACK DEMPSEY 63R (PED R3)  
**Sire: ERNMORE ULYSSES 21U (IAC F6090E)**  
 ERNMORE FRANCIS 26M (PED E4)  
 JUMPER RR5 (OAF P8894F)  
**Dam: SEDALIA ALICIA (DEG A12E)**  
 SEDALIA PAULETTE FL143 (DEG P4E)

**Comments:** Embryo Package 5 A Grade: Alicia (AI) (ET) her sire is the well-known Jumper full French, that I have had great breeding success with. Her dam, Paulette, is by Newthrus Solar full French and on her dam side was Sedalia Josephine and her sire was Fleets Rascal full French so, as you can see, Alicia had strong full French bloodlines indicated by the photo of her, using Ernmores Ulysses poll that always polled my cattle with one in particular was Sedalia Milford poll at Melbourne Show 1994 on his first showing won Grand Champion bull and Reserve Interbreed only lost by one point in that event. If you are wanting volume and thickness in your polled cattle, these embryos should do it. A 50% guarantee with a replacement embryo is available when implanted by approved technician.

## EMBRYO PACKAGE: SEDALIA STYLIST X SEDALIA ALICIA

A/c: D & B GIDDINGS

	CE DIR	CE DTR	GL	BW	200	400	600	MAT	MILK	SS	EMA	RIB	RUMP	RBY	IMF
EBV	-4.9	-3.7	+0.2	+1.7	+9	+14	+18	+23	+1	+0.3	+1.0	-0.9	-1.0	+0.9	

5 A grade Embryos  
50% guarantee if implanted  
by an approved ET technician.

January 2020 Australasian Charolais GROUP BREEDPLAN MID PARENT PREDICTION

AHH STYLIST 16U (OAC F7069E)  
**Sire: SEDALIA STYLIST (DEG N4E) (P)**  
 SEDALIA KATHY (DEG K92E) (P)  
 JUMPER RR5 (OAF P8894F)  
**Dam: SEDALIA ALICIA (DEG A12E)**  
 SEDALIA PAULETTE FL143 (DEG P4E)

**Comments:** Embryo Package 5 A Grade: Sedalia Stylist (AI) (ET) poll is a full brother to Sedalia Notagain poll who was the 1994 Melbourne Show Junior Champion and, in 1995, was Adelaide Grand Champion, defeating the Melbourne Interbreed bull. Stylist was used as my herd sire, polling my cattle. His dam, Kathy, poll was sired by HHP Monte Carlo 1st poll who was a very popular used bull. Kathy was a lovely smooth soft cow with plenty of milk. Stylist was a very long bull with plenty of volume, thickness and bone, as you can see by his photo. If you are wanting poll, length, thickness and volume, these embryos should do it. A 50% guarantee with a replacement embryo when implanted by an approved technician. All of Alicia (AI) (ET) details can be seen reading the Ernmore Ulysses embryos that are for sale.

5 A grade Embryos  
50% guarantee if implanted  
by an approved ET technician.

January 2020 Australasian Charolais GROUP BREEDPLAN MID PARENT PREDICTION

NOVOTEL (OAF S7519F)  
**Sire: SEDALIA CHANCELLOR (DEG C30F)**  
 SEDALIA ULTIMATE FT27 (DEG U3F)  
 JUMPER RR5 (OAF P8894F)  
**Dam: SEDALIA ALICIA (DEG A12E)**  
 SEDALIA PAULETTE FL143 (DEG P4E)

**Comments:** Embryo Package 5 A Grade: Chancellor was Grand Champion of Beef Australia 2009 with data at 24 months of 1018 kg, 12 and 10 fat score, 143 cm2 EMA. He was an outstanding full French bull; the best bred French bull I have seen in my long showing career. His feet have never been trimmed, with great smooth laid in shoulders with plenty of softness and muscle right down to his hoofs together with a great sirey head, an impeccable temperament to go with it. His semen is still for sale at John Atkinson United Cattle Breeding Services Qld 07 4666 3376. Sedalia Alicia (AI) (ET) comments are wrote up with other embryos thats been offered here for sale today. Embryos stored at Australian Animal Genetics, VIC Rob Pashen 03 5977 1770. A 50% guarantee with a replacement embryo is available when implanted by an approved technician.

# CHAROLAIS BREEDPLAN EBV Explanations

## EBVs

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These estimates are called Estimated Breeding Values (EBVs).

### Accuracy

Accuracy (%) is based on the amount of performance information available on the animal and its close relatives - particularly the number of progeny analysed. Accuracy is also based on the heritability of the trait and the genetic correlations with other recorded traits. Hence accuracy indicates the "confidence level" of the EBV. The higher the accuracy value the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives.

## TRAITS

**Calving Ease EBVs (%)** are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

**CE % Dir = Direct Calving Ease** - The EBV for direct calving ease indicates the influence of the sire on calving ease in purebred females calving at two years of age.

**CE % Daughters = Daughters' Calving Ease** - The EBV for daughters' calving ease indicates how easily that sire's daughters will calve at two years of age.

**Gestation Length EBV (days)** is an estimate of the time from conception to the birth of the calf and is based on Artificial Insemination & hand mating records. Lower (negative) Gestation Length EBVs indicate shorter gestation length & therefore easier calving & increased growth after birth.

**Birth Weight EBV (kg)** is based on the measured birth weight of progeny, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

**200-Day Growth EBV (kg)** is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

**400-Day Weight EBV (kg)** is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

**600-Day Weight EBV (kg)** is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

**Mature Cow Weight EBV (kg)** is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

**Milk EBV (kg)** is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

**Scrotal Size EBV (cm)** is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

**Eye Muscle Area EBV (sq cm)** is calculated from measurements from live animal ultrasound scans and from abattoir carcass data, adjusted to a standard 300 kg carcass. This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 300 kg dressed carcass. More positive EBVs indicate better muscling on animals. Sires with relatively higher Eye Muscle Area EBVs are expected to produce better muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower Eye Muscle Area EBVs.

**Rib Fat and Rump Fat EBVs (mm)** are calculated from measurements of subcutaneous fat depth at the 12/13 rib site and the P8 rump site (from live animal ultrasound scans and from abattoir carcasses) and are adjusted to a standard 300 kg carcass. These EBVs are indicators of the genetic differences in fat distribution on a standard 300 kg carcass. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

**Retail Beef Yield EBV (%)** indicates genetic differences between animals for retail yield percentage in a standard 300 kg carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

**Intramuscular Fat EBV (%)** is an estimate of the genetic difference in the percentage of intramuscular fat (marbling) at the 12/13th rib site in a 300 kg carcass. Depending on market targets, larger more positive values are generally more favourable.

## Selection Indices

Charolais selection indices are calculated for three market specifications, namely, Domestic, Export and Northern Terminal. Index values are reported as EBVs, in units of relative earning capacity (\$) for a given market. They reflect both the short-term profit generated by a sire through the sale of his progeny, and the longer-term profit generated by his daughters in a self-replacing cow herd. A selection index combines the EBVs with economic information (costs and returns) for specific market and production systems to rank animals based on relative profit values. Note that different types of animals can give similar profit values, so consideration should be given to both the index and the component EBVs when selecting animals for a particular production system. More information is available on selecting animals using a selection index. The Index values are derived using BreedObject technology. More information is available from the BreedObject web site.

**Domestic Index (\$)** - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd with a British cow base (eg Angus) targeting grass-finished production for the domestic trade. This Index assumes pasture grown & finished steers weighing 430 kg (240 kg HSCW and 6 mm P8 fat depth) at 12 months. Daughters are retained or sold for breeding therefore maternal traits are of importance. In response to industry feedback, positive emphasis has been placed on finishing ability.

**Export Index (\$)** - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd with a British cow base (eg Angus) targeting the production of steers for export markets. This Index assumes pasture grown & finished steers weighing 700 kg (380 kg HSCW and 9 mm P8 fat depth) at 29 months. Daughters are retained or sold for breeding therefore maternal traits are of importance. In response to industry feedback, positive emphasis has been placed on finishing ability.

**Northern Terminal Index (\$)** - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Northern Australia (ie Brahman cows) targeting the production of grass finished steers for the Jap Ox market. Steers are sold direct to slaughter at 630 kg (345 kg HSCW and 5 mm P8 fat depth) at 28 months. All progeny are slaughtered. In response to industry feedback positive emphasis has been placed on finishing ability.
