2% Outside Agents Rebate is available to Licensed Agents introducing purchasers in writing 24 hours prior to sale and settling on their behalf within 7 days of invoice.

# 2020 Alumy Creek Angus Bull Sale

**Welcome to our 30th Annual on property and online Angus Bull Sale.**

What an incredible resilience marathon the past two years have been for us all with once in a century drought and bushfires on the eastern seaboard and now a human pandemic. We are certainly living in epic historical times. The value and importance of agriculture and food security both globally and nationally has been sharply focused in the past few months in ways we could not have envisaged at the start of the year. What a crazy change it has been. More than ever the world is aware of the need to feed populations a sustainable protein source. Fortunately beef production continues to shine, the future bright with consumers looking to stock their freezers (and cook from home) plus many producers across the country seeking to rebuild their herds with quality Angus genetics.

This year we are pleased to offer a **terrific draft of 42 two year old bulls**, which contains an excellent selection of powerful, **thick, heavily muscled carcass bulls very suitable for heifers** or cows. This draft of bulls presents very well having powered away after a very tough season last year and being testament to the easy doing high feed efficiency genetics we select for in our Angus cow herd. They display **great temperament, are long bodied and strong topped with deep spring of rib, added thickness and consistent natural muscling**. The AI sires of these bulls are some of the best genetics available within the Angus breed globally and in Australia. Colin inspected all the US sires and we continue to be an early adopter using outcross genetic bulls early in their breeding career with many seeing heavy use as superior sires as time progresses.

We continue to select to breed Angus cattle that can produce a profit under commercial conditions with market flexibility to target the domestic, heavy grainfed or grassfed markets. Because we retain the sisters to the bulls we sell, the mature cow size of our cattle must be sustainable in our grazing environment, crucial in recent seasons.

We also apply stiff selection pressure for fertility, our heifers must calve as two year olds unassisted and must go back in calf quickly to produce a calf each and every year. Clients always comment on the consistency, quality and performance of their Alumy Creek sired replacement females. All the bulls in the catalogue will produce this valuable type of easy keeping, high fertility replacement females bred to work hard bringing in a good calf every year.

We believe in using temperament, structure, EBVs and genomics as equal tools in the selection box for balanced sustainable cattle breeding and we don't just add the EBV numbers or single trait select. Our selection focus produces cattle that can achieve extra performance kilos on grass in the paddock with the carcass potential to excel in the feedlot.

We continue to embrace new technology with the sale bulls again **all tested with the Zoetis HDi50K DNA genomic testing** and **all sire verified** so have confidence with your purchase. The bulls have outstanding Breedplan results, many with top 1–10% EBVs for the multiple traits we have selected for over the past 30 years—**Calving Ease, Short Gestation Length, fast Growth, big Eye Muscle Area and heavy high quality Carcass Wt with high Feed Efficiency and Retail Yield**.

These breed rankings are measured against all the performance recorded Angus cattle in Australia and New Zealand, confirmation that our bulls carry the genes for profitable performance even though our environment doesn't always allow them to express their full potential. Our bulls present in strong forward paddock condition, ready to go out and work well for you.

**The 2020 sale draft** includes an outstanding selection of bulls by the big muscle calving ease carcass specialists **Baldrige Compass, KCF Bennett TheRock,** and **LD Capitalist 316** great for heifers or cows, the low birth weight Feedlot specialists Prophet son **Connealy Sandman** and Australian bred **Esslemont Lotto**—whose sons have topped sales around the country, the moderate birth weight yet very powerful high growth high efficiency muscle and feedlot sires **Freys Opportunity** and **Vision Unanimous** both perfect to power up and add profit to bos indicus or Euro x cows and the sleep easy calving ease yet heavy muscled maternal cowmaker **Musgrave Apache** plus the very last sons from our walking sire the all-rounder **Carabar Wheelwright H215** (maternal brother to leading Australian sire Carabar Docklands). Check out the comments on each reference sire which appears under their Breedplan figures.

**Our quality draft of locally bred raised Tenterfield tough bulls will be offered for sale at 1pm on Friday 29 May 2020 at Coldawinda, Tenterfield NSW, just 10 minutes south of the Qld border on the New England Hwy. Photos and videos are available online or the bulls are available for inspection at Coldawinda, Scrub Road, Tenterfield from 10 am on sale day or by prior arrangement with Colin on 0429 431 900 or any of the agents.**

As per usual phone bidding is also available through the agents and the bull sale will interface with AuctionsPlus for as for those bidding from the comfort of their lounge room. Please call us if you would like a chat about any of the bulls. Take care and stay safe.

**Colin, Lisa and family**

# Sale details

**COVID-19 CHANGES:** The sale will operate under the **CURRENT COVID-19 REQUIREMENTS on the day and be subject to change.** Fortunately agriculture has been deemed an essential service to maintain the food chain, with livestock auctions listed as exempt activities under the Covid-19 gathering and movements Public Health Orders. **Do not attend the sale in person if you have felt sick in the previous three days or feel unwell on the day or if you have been overseas in the previous 14 days, have had contact with a Covid-19 infected person in the previous fortnight or are awaiting test results. Please stay at home, embrace the digital age and participate online or over the phone. All persons attending on property will be required to register and record contact details. Hand sanitizing with social distancing will be observed both in the pens and during the auction. It will not be a social outing this year—please do not bring the whole family. If you are travelling over from Queensland for the day, no entry permit is required to travel into NSW but each Queensland resident will need to apply online for a current Queensland Entry Pass in order to return. WE STRONGLY RECOMMEND PRESALE INSPECTIONS AND BIDDING ONLINE OR OVER THE PHONE TO MANAGE THE CURRENT COVID-19 HEALTH RISKS.**

**SALE DATE AND PRIOR INSPECTION TIME:** The sale will commence at **1pm on Friday, 29 May 2020**, on property and online with AuctionsPlus. Cattle will be penned by 10am on Sale Day and we strongly recommend presale inspections which are by arrangement via the agents or vendor. **There will be no set open day this year. If you buy online or over the phone sight unseen we happily stand behind the description of our bulls on offer.** All lots can be viewed online at AngusAustralia, AuctionsPlus or [www.alumycreekangus.com.au](http://www.alumycreekangus.com.au)

**REFRESHMENTS:** As usual **all weather undercover open shelter** is available but the current Covid 19 regulations will dictate the sale catering. Subject to change **NO LUNCH OR REFRESHMENTS** will be available at this year's sale. Rather than our regular complimentary fine Angus steak sandwich, we suggest **you support the Local Tenterfield businesses providing magnificent takeaway food options** as you travel through town.

**SELLING SYSTEM:** Sale of animals will be conducted under normal auction terms and conditions and will be interfaced online with AuctionsPlus. Please **register and complete the buyers training with AuctionsPlus at least 24 hours presale and log in early** if bidding online. Your livestock agent will assist and **PHONE BIDDING IS AVAILABLE if you prefer**—please contact any of the agents to organize. Your PIC must be supplied to the selling Agents to obtain a buyer's number. Successful purchasers must give written advice regarding transport arrangements, with cattle are available for delivery at the conclusion of the sale. All animals are sold **exclusive** of GST.

**INSURANCE:** Is available from the agents on the day. We strongly recommend insurance on your purchases.

**DIRECTIONS:** 'Coldawinda' is located 4kms south east of Tenterfield at 420 Scrub Road. Turn East off the **New England Hwy at Clifton Street**, on the Southern End of Tenterfield. Travel one block to turn right at the T section onto **Scrub Road**. Travel **4kms** on bitumen with 'Coldawinda' on the Right.

**HERD HEALTH:** All sale bulls are **tested negative PI** (Persistently Infected) and vaccinated against **Pestivirus** with **Pestigard** vaccine. They are fully vaccinated with **7 in 1** (for **Clostridial** and **Lepto**), **Vibrio** and **3 Day Sickness** vaccine only requiring annual boosters. **Johnes Disease:** Alumy Creek Angus has over 20 years negative tests as a MN3 herd in the old JDMAP. We currently claim a JBAS 7. Our bulls are eligible to enter all states without further testing except WA. **Cattle Tick:** Alumy Creek Angus is located in a cattle tick free area. Bulls can easily be held and blooded if required by arrangement. **Parasites:** Bulls were treated with Fasinex and Cydectin in May 2020.

**MANAGEMENT:** All Alumy Creek bulls carry a freeze brand for easy ID in the paddock. Alumy Creek sale bulls are quiet, well-mannered cattle used to being handled on foot, with dogs, ATVs and vehicles. They are rigorously screened for their temperament, but sale day places extra stresses on the bulls and this is no guarantee they will not misbehave under the pressure of sale day.

**FERTILITY:** All bulls have passed a physical examination and microscopic crush side semen test.

**GUARANTEE:** All bulls are sold with a six month guarantee as a calf getter valid for six months from the sale date. The vendor must receive written notification together with a certificate from a registered veterinarian stating the nature of the infertility before the expiration of that period. Animals injured or lost as a result of accident, negligence or any disease, are not covered by this guarantee. Vendor liability relating to fertility claims will not exceed the purchase price of the animal and are limited to a credit equal to the purchase price less the salvage value which may be utilized at a future Alumy Creek sale. Talk to us if you think you have a problem.

**SIRE VERIFICATION and DNA HDi50K TESTING:** All bulls have been **sire verified (SV)** and **genomic HDi50K** tested. They can be used to breed registered calves without further testing. The performance recording and genomic results are single step incorporated into TACE Breedplan to produce Estimated Breedplan Values (EBVs). TACE has been modified this year to also flatten the curve—drawing either end of the bell curve out further than in previous versions. Many bulls in this draft are in the elite top 1-2% of the Australian/ New Zealand drop for Angus and Angus x seed stock. All bulls in the sale are free untested (FU) for the cattle defect genes AM, NH & DD except Lot 10 NKEP082 who is NHC but very well suited for bos indicus or euro x bred commercial herds. Talk to Lisa if you need more information.

**HEALTH AND SAFETY OF VISITORS: Covid-19 social distancing and frequent hand sanitizing must occur.** Visitors enter the pens of their own risk. **Children under 16 years old and dogs are strictly not permitted at the sale.** The bulls are known to be of good temperament under normal conditions. However sale day is not 'normal conditions'. If you enter the pens, take note of your surrounds and be conscious of your safety. Do not crowd the bulls, or loiter in the pens. Please use common sense and be alert at all times. Do not be alarmed, but it is critical that visitors pay attention to the risks associated with cattle and the day.

**SALE CATALOGUE DISCLAIMER:** All reasonable care has been taken by the vendor to ensure that the information provided in this catalogue is correct at the time of publication. However neither the vendor, the selling agents nor Angus Australia make any representations about the accuracy, reliability or completeness of any information in this catalogue, including but not limited to pedigree, DNA information, EBVS and Index Values, and do not assume any responsibility for the use or interpretation, accuracy or completeness of the information included in the catalogue, nor for the outcome (including consequential loss) of any action taken based on this information. You are encouraged to seek independent verification of any information contained in this catalogue before relying on such information.

# Understanding the Transtasman Angus Cattle Evaluation (TACE)

## What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation (TACE) is the genetic evaluation program adopted by Angus Australia for Angus and Angus infused beef cattle. TACE uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcass, fertility).

TACE includes pedigree, performance and genomic information from the Angus Australia and New Zealand Angus Association databases to evaluate the genetics of animals across Australia and New Zealand.

TACE analyses are conducted by the Agricultural Business Research Institute (ABRI), using beef genetic evaluation software developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

## What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

## Using EBVs to compare the genetics of two animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcass than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

## Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals in Australia and New Zealand.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes.

For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

## Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

## Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcass merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following pages.

BIRTH			
Calving Ease Direct	(%)	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
Calving Ease Daughters	(%)	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
Gestation Length	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
Birth Weight	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.

<b>GROWTH</b>			
200 Day Growth	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
400 Day Weight	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
600 Day Weight	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
Mature Cow Weight	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
<b>FERTILITY</b>			
Days to Calving	kg	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
Scrotal Size	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
<b>CARCASE</b>			
Carcase Weight	kg	Genetic differences between animals in hot standard carcass weight at 750 days of age.	Higher EBVs indicate heavier carcass weight.
Eye Muscle Area	cm <sup>2</sup>	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
Rump Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
Retail Beef Yield	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
Intramuscular Fat	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.
<b>FEED EFFICIENCY</b>			
Net Feed Intake (Feedlot)	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
<b>TEMPERAMENT</b>			
Docility	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
<b>STRUCTURE</b>			
Front Feet Angle	%	Genetic differences between animals in desirable front feet angle (strength of pastern, depth of heel).	Higher EBVs indicate more desirable structure.
Front Feet Claw Set	%	Genetic differences between animals in desirable front feet claw set structure (shape and evenness of claw).	Higher EBVs indicate more desirable structure.
Rear Feet Angle	%	Genetic differences between animals in desirable rear feet angle (strength of pastern, depth of heel).	Higher EBVs indicate more desirable structure.
Rear Leg Hind View	%	Genetic differences between animals in desirable rear leg structure when viewed from behind.	Higher EBVs indicate more desirable structure.
Rear Leg Side View	%	Genetic differences between animals in desirable rear leg structure when viewed from the side.	Higher EBVs indicate more desirable structure.
<b>SELECTION INDEXES</b>			
Angus Breeding Index	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems.	Higher selection index values indicate greater profitability.
Domestic Index	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade.	Higher selection index values indicate greater profitability.
Heavy Grain Index	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 200 day feedlot finishing period for the grain fed high quality, highly marbled markets.	Higher selection index values indicate greater profitability.
Heavy Grass Index	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers.	Higher selection index values indicate greater profitability.

A very deep, super thick, heavy muscled bull with lots of length and great butt profile. Terrific capacity and volume, strong topline, tight sheath, good testicles & feet. Always a knockout calf, from top producing cow family & sister to several sale topping bulls. Top 1% all growth traits, carcass wt and Angus breeding, Domestic & Heavy Grassfed \$ Index. Top 2% Scrotal & Heavy Grainfed \$ Index. Combined with low birthwt (actual 33kg), short gestation length, top calving ease & curve bending growth. Total standout outcross bull with sire potential- very hard to fault & favorite since calf.

Another very good 316 son- they are really stamped similar style of bulls by their sire. Very deep ribbed, thickset, strong topline, smooth bodied, slick skinned and great muscle expression. Top 1% calving ease with top 2% low birthwt (31kg actual) with top 1% easy doing +ve fats and top 27% EMA. Excellent sleep easy calving ease bull with added carcase & maternal value from Earnan/ TC Aberdeen cow line. Use with confidence to join your heifers.

We used Sandman with confidence for calving ease over heifers & added carcass IMF value. Heifers 1st calf. Top calving ease shaped bull, low bwt (30kg actual) with powerful growth for top 3% 200D & top 8 & 9% 400 & 600D growth plus a top 23% for carcass IMF.(7.6 IMF on actual scan). Gd slick coat & topline, deep well sprung rib will grow on to bigger bull. Use for calving ease & to add marbling, small amt of chrome on underline tip (not detrimental). Add some growth & carcass value to your heifers progeny.

# BRINGING YOUR NEW BULL HOME

WHEN PURCHASING A BULL, CARE AND HANDLING AFTER THE SALE CAN BE AS IMPORTANT AS THE PURCHASE ITSELF. LOOKING AFTER YOUR BULL WELL DURING THE INITIAL STAGES OF HIS WORKING LIFE MAY ENSURE LONGEVITY AND SUCCESS WITHIN YOUR BREEDING HERD.

## PURCHASE

Temperament is an important characteristic when selecting a bull. Selecting a bull that may be flighty or aggressive will make life difficult for you each time he is handled. Note which bulls continually push to the centre of a mob, run around, or are unreasonably nervous, aggressive or excited.

At the sale, note any changes of temperament by individual bulls. Some bulls that are quiet in the yard or paddock may not like the pressure and noise of the auction and become excited. Others that were excited beforehand get much worse in the sale ring and can really perform. Use the yard or paddock behaviour as a guide, rather than the temperament shown in the ring.

## DELIVERY

When transporting your new bull insurance against loss in transit, accidental loss of use, or infertility, is sometimes provided by vendors. Where it is not, it is worth considering. After purchase tips:

- When purchasing, ask which health treatments he has received.
- Treat and handle him quietly at all times - no dogs, no buzzers. Talk to him and give him time and room to make up his mind.
- With more than one bull from different origins, you must be able to separate them on the truck.
- Make sure that the truck floor is covered to prevent bulls from slipping. Sand, sawdust or a floor grid will prevent bulls from being damaged by going down in transit.
- If you can arrange it, put a few quiet cows or steers on the truck with the bull. Let them down into a yard with the bulls for a while before loading and after unloading.
- Unload and reload during the trip as little as possible. If necessary, rest with water and feed. Treat bulls kindly your impatience or nervousness is easily transmitted to an animal unfamiliar to you and unsure of his environment.

## IF YOU USE A PROFESSIONAL CARRIER:

- Make sure the carrier knows which bulls can be mixed together.

- Discuss with the carrier, resting procedures for long trips, expected delivery time, truck condition and quiet handling.
- Give ear tag and brand numbers to the carrier and make sure you have the carrier's phone number.
- If buying bulls from interstate, organise any necessary health tests before leaving and work out if any other requirements must be met before cattle can come into another State.

When buying bulls from far away, you may often have to fit in with other delivery arrangements to reduce cost. You should make it clear how you want your bulls handled.

## ARRIVAL

When the bull or bulls arrive home, unload them at the yards into a group of house cows, steers or herd cows. Never jump them from the back of a truck directly into a paddock—it may be the last time you see them. Bulls from different origins should be put into separate yards with other cattle for company.

Provide hay and water, then leave them alone until the next morning .

The next day, bulls should receive routine health treatments. If they have not been treated before, all bulls should be vaccinated with:

- 5-in-1 vaccine;
- vibriosis vaccine;
- leptospirosis vaccine (if in areas like the Hunter where leptospirosis exists);
- three-day sickness vaccine (if in areas where this sickness can cause problems).

Give particular attention to preventing new bulls bringing vibriosis into a herd. Vibriosis, a sexually transmitted disease, causes infertility and abortions and is most commonly introduced to a clean herd by an infected bull. These bulls show no signs of the illness. Vaccinated bulls are free from vibriosis, so vaccinating bulls against the disease should be a routine practice.

Vaccination involves two injections, 4–6 weeks apart, at the time of introduction, and then a booster shot every year. Complete the vaccinations 4 weeks before joining.

DELIVERY

AFTER PURCHASE TIPS

ARRIVAL

MATING NEW YOUNG BULLS

MANAGING OLDER HERD BULL

DURING MATING

NORTHERN AUSTRALIA

# BRINGING YOUR NEW BULL HOME

Consult with your veterinarian and draw up a policy for treating bulls on arrival and then annually. Bulls should be drenched to prevent introducing worms and, if necessary, should be treated for lice.

Plan to give follow-up vaccinations 4–6 weeks later. Leave the bulls in the yards for the next day or two on feed and water to allow them to settle down with other stock for company. A bull's behaviour will decide how quickly he can be moved out to paddocks.

## MATING NEW YOUNG BULLS

Newly purchased young bulls should not be placed with older herd bulls for multiple-sire joining. The older, dominant bull will not allow the young bulls to work, and will knock them around while keeping them away from the cows.

Use new bulls in either single-sire groups or with young bulls their own age. If a number of young bulls are to be used together, run them together for a few weeks before joining starts. They sort out their pecking order quickly and have few problems later.

When the young bulls are working, inspect them regularly and closely.

## MATING NEW YOUNG BULLS

Older working bulls also need special care and attention before mating starts. They should be tested or checked every year for physical soundness, testicle tone, and serving capacity or ability.

All bulls to be used must be free-moving, active and in good condition. Working bulls may need supplementary feeding before the joining season to bring up condition.

## DURING MATING

- Check bulls at least twice each week for the first 2 months. Get up close to them and watch each bull walk; check for swellings around the sheath and for lameness.
- Have a spare bull or bulls available to replace any that break down. Replace any suspect bull immediately.
- Rotate bulls in single-sire groups to make sure that any bull infertility is covered. Single-sire joining works well but it has risks. The bulls must be checked regularly and carefully, or the bulls should be rotated every one or two cycles.

Bulls are a large investment for breeding herds and they have a major effect on herd fertility. A little time and attention to make sure they are fit, free from disease and actively working is well worthwhile.

## NORTHERN AUSTRALIA

Although the Angus breed originated in a cooler climate, they can adapt to subtropical regions with many straight-bred and cross bred producers finding success in Northern Australia. Some of the following information may also be helpful for new bulls located in more temperate climates.

## ADAPTATION

The key to Northern success for Angus is that cattle introduced from the Southern regions of Australia be allowed to adapt to their new environment before commencing their working life. If possible, a break of 3 months is advisable before you set your bull to work.

## PURCHASE IN COOLER MONTHS

Ensure your bulls are in good condition before they do commence their working life. The cooler months are an ideal time to purchase and introduce Angus cattle, allowing them plenty of time to acclimatise.

## CHANGE OF FEED SOURCE

When inducting Angus cattle into your herd consider their source of feed. Have you taken an animal which has been supplemented on grain straight to a dry pasture? Animals should be gradually changed over to their new feed to ensure they do not lose condition. This may involve using supplements which could include dry lick/urea blocks.

## MANAGING CATTLE TICKS

For ticky areas, bulls should be vaccinated prior to transport and given another booster afterwards. Remember males are more susceptible to ticks than females.

## **TERMS AND CONDITIONS OF SALE**

- Terms are strictly cash or approved cheque on the day of sale, unless prior arrangements have been made with the Auctioneer before the fall of the hammer.
- Subject to the reserve price, the highest bidder shall be the purchaser.
- In the event of a disputed bid, the auctioneer shall be the sole arbitrator and his decision shall be final.
- The auctioneer may refuse to accept any bid, which, in his opinion, is not in the best interest of the vendor and shall have the right to refuse any such bid without giving any reason.
- Where the vendor reserves the right to bid at the auction in respect of a lot and instructs the auctioneer to make more than one bid on his behalf, the auctioneer shall, prior to submitting the lot for sale by auction, announce in a clear and precise manner the number of bids reserved by the vendor in respect to that lot.
- A bidder shall be deemed to be a principal unless, prior to the bidding, he has given to the auctioneer copy of written authority to bid for or on behalf of a person.
- The last price called by the auctioneer shall be the amount at which the lot has been sold.
- A bid cannot be made or accepted after the fall of the hammer.
- All lots will be at the purchaser's risk immediately after the fall of the hammer and no responsibility will be incurred by the auctioneer or vendor for their safekeeping. No exceptions shall be taken to any of the lots on delivery the whole having been open for inspection by the purchaser prior to the sale and on no account will any allowance be made.
- Every person on the auction premises before, during and after the sale shall be deemed to be there at his own risk and with notice of the conditions of the premises. Such person shall have no claim against the auctioneer or vendor in respect of any injury sustained or any accident, which may occur from any cause whatsoever.
- All cattle will be sold GST exclusive. GST will be added to the purchase price.

**A 2% Outside Agents Rebate is available to Licensed Agents introducing purchasers in writing 24 hours prior to sale and settling on their behalf within 7 days of invoice.**

## Buyer's option to opt out of disclosing personal information to Angus Australia

Transport instructions:.....

Signature of purchaser or agent .....

### Special notice to all buyers

In the interest of buyers and to prevent the occurrence of mistakes, all instructions concerning the delivery, trucking or shipping of cattle must be in **writing** and signed by the buyer or his representative.

### Insurance

**We recommend you consider insurance on your purchases from the fall of the hammer. Please talk to the agents.**

**Can't make the sale?**

*Purchase online in eight simple steps!*

*Log on to AuctionsPlus and bid on your phone, tablet or computer.*

Contact AuctionsPlus on (02) 9262 4222
