WELCOME TO OUR 2020 ROMA SALE

WELCOME TO OUR 2020 ROMA SALE – THE FIRST SALE AT NEW SALE COMPLEX – AT THE EARLIER TIME OF 11AM FRIDAY 31ST JULY. THIS YEAR’S SALE WILL BE HELD AT THE NEW ROMA SALE YARDS COMPLEX AND IS THE FIRST SALE IN THE NEW FACILITY. FOR THOSE UNABLE TO TRAVEL THE SALE WILL BE INTERFACED ON AUCTIONS PLUS AS USUAL. INSPECTION PRIOR TO THE SALE CAN ALSO BE ARRANGED.

We have an elite line-up of two year old 75 Angus bulls. Thanks to Andrew Holt and Coly Ede and the Nutrien Livestock team for their continued support.

Like most people we have had a tough year dealing with drought in all our operations, the most severe impacts were in Southern WA where we experienced the lowest rainfall on record for a second year running. It's good to hear that parts of Queensland have had rain this year and cattle prices have skyrocketed post drought.

We have had to relocate a large number of our breeding females from Western Australia back to Victoria as the impacts of drought continue. We now have grass for the 500 breeding cows currently calving at Hopetoun but water for livestock remains a major issue.

GrowSafe Feed Efficiency testing unit is now fully operational and we have just complete the testing of the 4th Cohort.

The 2020 Roma bulls have been managed at Victoria and grazed on sorghum from April through to June. They were relieved to get out of the mud in what is a good old fashioned Victoria winter and head up north to get some sun.

They have all been semen tested and will be blooded for ticks and 3-day sickness prior to the Sale.

NEW GROWSAFE TECHNOLOGY AND LAWSONS ANGUS R&D CENTRE

We feel the investment in our GrowSafe technology and Feed Intake system is a valuable genetics and management tool going forward. The GrowSafe Beef (GSB) allows us to weigh animals on a daily basis as they drink, so we not only record daily feed intakes we also get weight performance in real time. This is the feedback that has been lacking in beef systems and sets our genetics apart.

In terms of genetics we see the ability to accurately measure what individual animals eat and their feed conversion rate as an opportunity to fine tune and rank sires for these important traits – Residual Feed Intake (RFI or NFI), Dry Matter Intake (DMI) and Feed Conversion (FC). We know our genetics (and those sourced from GAR) are amongst the most efficient in the Angus breed from the many feedlot trials and feedback from feedlots over many years, however, this allows us to identify and rank animals with greater accuracy and make even greater genetic progress.

We are at a stage where we have most of our herd in optimal ranges for all key economic traits and the timing of being able to put more emphasis on feed efficiency is perfect. Breedplan is an amazing tool and describes animals for a wide range of economic traits very well, but most of the traits (with the exception of MCW) are based on outputs, whereas in farming systems getting the balance right between inputs and cost of production and outputs (like growth) is critical for beef farmers. This is the start of a great learning journey and we look forward to sharing this information with you as we progress.

2020 Roma Sale Bulls

This year's 75 Sale bulls are sired by the world's leading performance Angus sires including the first group of Lawsons Momentous M518, who has been used widely across the Seedstock Industry, as well as his sire GAR Momentum. Large sire-groups also by Paringa Judd J5, his son LinkedIn, Rennylea Kodak K522 and Alloura Get Cracking G10. Other feature sires include GAR Prophet, GAR Prophecy, GAR Sunrise, Ayrvale Bartel E7 and GAR Method, all well balanced highly proven performance sires that will make a valuable contribution to any breeding program whether in the South or crossbreeding in the North.

Harry and Greg Gardiner, Gardiner Angus Ranch, June 2019 viewing some of their PTIC heifers.

All 75 Sale bulls rank at the top end of the Angus breed on many levels including:

- 60/75 (80%) of bulls have a calving ease tick ✓ meaning they are safe to mate with heifers and 57/75 (76%) are above breed average (+1.8) for Calving Ease Direct (DIR)
- Top 35% for Calving Ease Direct (DIR) and lowest 25% for Birth Weight (BW)
- Top 15% of the breed for Heavy Grain Fed Index (GRN), Domestic Index (DOM) and Angus Breeding Index (ABI)
- Breed average for 600D Growth
- Below Breed average for Mature Cow Weight (MCW)
- Top 10% for marbling (intramuscular fat)
- Top 15% for Eye Muscle Area (EMA)

IT'S EASY TO BREED HIGH INDEXING BULLS, IT'S HARDER AND TAKES A LOT OF FOCUS AND DISCIPLINE TO BREED CATTLE THAT ARE ABLE TO REBREED IN TOUGH SEASONS AND HANDLE HIGH STOCKING RATE PRESSURE.

The feedback from our Northern clients on the hardiness, adaptability, calving ease and high performance of progeny has been very encouraging in these past tough years. Photo: Harrow Grazing, Arcadia Valley, Qld courtesy of Angus Australia

Selection of bulls suitable to mate yearling heifers and selecting your replacement heifers

Hopefully many breeders that need to rebuild numbers or as a normal part of their annual breeding program are in a position to retain as many heifers as they can this year. **It's important to remember that retaining heifers that are sired by superior bulls is the fastest and most cost effective way of making long term genetic progress. Anything with a red calving ease tick is recommended with confidence to use on yearling heifers (80% of the Sale bulls have a red tick).**

We look forward to seeing you in Roma on Friday 31st July. With on-going Covid-19 travel restrictions we may not be able to spend as much time visiting clients this year, but please feel free to contact us anytime.

Regards,

A handwritten signature in black ink, appearing to read "Harry Lawson".

Harry Lawson

LIMITATIONS OF \$ INDEXES

These Sale bulls are the highest averaging \$ Indexing bulls compared to all other current Sales across Australia for all Indexes - Heavy Grain, Domestic, Angus Breeding Index and Heavy Grass - and although the Indexes are a useful snapshot we do not recommend breeders look at Indexes in isolation and/or without

consideration of reviewing key underlying EBVs.

"THERE IS NO EASILY ACCESSIBLE, OBJECTIVE WAY FOR BREEDERS, PARTICULARLY BREEDERS IN THE BEEF AND SHEEP INDUSTRIES WHERE OWNERSHIP IS DIVERSE AND PRODUCTION ENVIRONMENTS VARY A GREAT DEAL, TO USE THESE PREDICTIONS INTELLIGENTLY."

-R. M. BOURDON, 1998

example, many high Indexing bulls in other programs have massive Mature Cow Weight (MCW) and often other significant flaws like calving ease, so we encourage people to take careful note of the individual EBVs and look more at Index's as an overall ranking.

STAY FOCUSED AND AVOID CHASING OUTCROSS GENETICS

AS SEEDSTOCK PRODUCERS WE ARE NOTORIOUSLY BAD AT TALKING ABOUT MAXIMISING TRAITS RATHER THAN FINDING OPTIMAL LEVELS OF PERFORMANCE. THE FOCUS FOR BEEF PRODUCERS NEEDS TO BE OPTIMISING KILOGRAMS PER HECTARE, NOT INDIVIDUAL WEANING WEIGHTS.

We encourage clients to stay focused and avoid jumping to different or new bloodlines each year to be different or thinking they need to avoid inbreeding. Bulls like Kodak and get Cracking G10 are good examples of new sires that offer options for those looking at outcross bulls. Try to spend some time studying the principles of our Sire-Mate program. We would encourage breeders to stay focused on multiplying the "good ones" and avoid the "flip flop" of chasing outcross sires.

ROMA SALE BULLS RANK IN THE TOP 15-20% FOR ALL INDEXES.

FERTILITY AND MATERNAL EFFICIENCY REMAINS THE BACKBONE OF ANY BREEDING OPERATION

Maternal efficiency is often overlooked but these tough years remind us of how important having flexible, efficient cows is for breeding herds.

THE RISK OF REPRODUCTIVE "CRASH" IN TOUGH YEARS IS MUCH GREATER WITH LARGER COWS.

Mature Cow Weight (MCW) is the best indicator of cows intake and feed requirements that most seedstock breeders (all breeds) ignore! Maturity pattern and frame score also help us keep cows that suit a wider range of environments and production systems.

Our ability to now also rank sires for feed efficiency (Net Feed Intake) will take us and our clients to another level over the next decade, without compromising all the hard yards we have made in other traits.

PRODUCING MORE WITH LESS IS NOW A REALITY AS WE CAN HONE IN IDENTIFYING ANIMALS THAT DO THE SAME OR BETTER JOB WITH LESS FEED.

These Sale bulls truly are unique in their multi-trait excellence across all major economic traits. A closer look at the bar charts on these bulls show they are unmatched in their balance of calving ease, maternal efficiency, growth and carcass traits. Just under 90% of these bulls are true calving ease bulls (they average +6.8 for Direct Calving Ease, which is top 20% of the breed) and still have carcass quality.

The consistency in the way these bulls rank in the breed shows how far we have come in 50 years of disciplined breeding. We also continue to focus on structure and temperament as part of our balanced approach to our breeding program. We understand the importance of these traits and any animals that are not sound with acceptable disposition or that do not breed within our short breeding season are sold/culled.

NUTRIEN LIVESTOCK ROMA...

You can count on us

Across the country, our people work hard to know livestock best. We've been in the business for more than 150 years and we're committed to provide the best marketing options for every season.

That's why you can rely on Nutrien Ag Solutions.

HARRY LAWSON LOOKS BACK ON
THE ACCOMPLISHMENTS OF LAWSONS
ANGUS AFTER 50 YEARS, AND WHAT
THE NEXT 50 HAS IN STORE.

LOOKING BACK...

ON 50 YEARS OF
SCIENCE, **NOT FICTION**
AT LAWSONS ANGUS.

50

1970 - 2020

CELEBRATING
-50 YEARS-

Pictured: Lawsons Angus farm in Yea, Victoria.

AFTER GRADUATING FROM LINCOLN UNIVERSITY IN 1989, I SPENT A COUPLE OF YEARS WORKING BACK ON THE FARM BEFORE HEADING OVERSEAS IN 1991. I ENDED UP IN LONDON WORKING IN GENETICS AND IN A LARGER ADVERTISING/MARKETING COMPANY.

In 1993-1994 I spent over a year working and travelling in the US including going to many Universities, conferences and meeting some of the best seedstock herds (all breeds) and animal breeders in the world.

Part of this study trip was to better understand how the seedstock industry operated in the US. The timing was also good from a technology perspective, as embryo transfer and the ability to collect embryos on-farm in the US coincided with the start of our partnership with Gardiner Angus Ranch (GAR). In hindsight, most of what I have been doing since coming back to the business in 1994 was implementing the strategies and ideas that were formulated at that time.

Cattle genetics for self-replacing beef herds involves small cumulative gains, sometimes at a frustrating pace of gain.

However I'm sure – as many of our clients would agree – that the Angus genetics we work with today are vastly different to fifty years ago, with the advances we have made the last twenty five years even more significant.

We should never underestimate how far we have come and the gains made in the Angus breed.

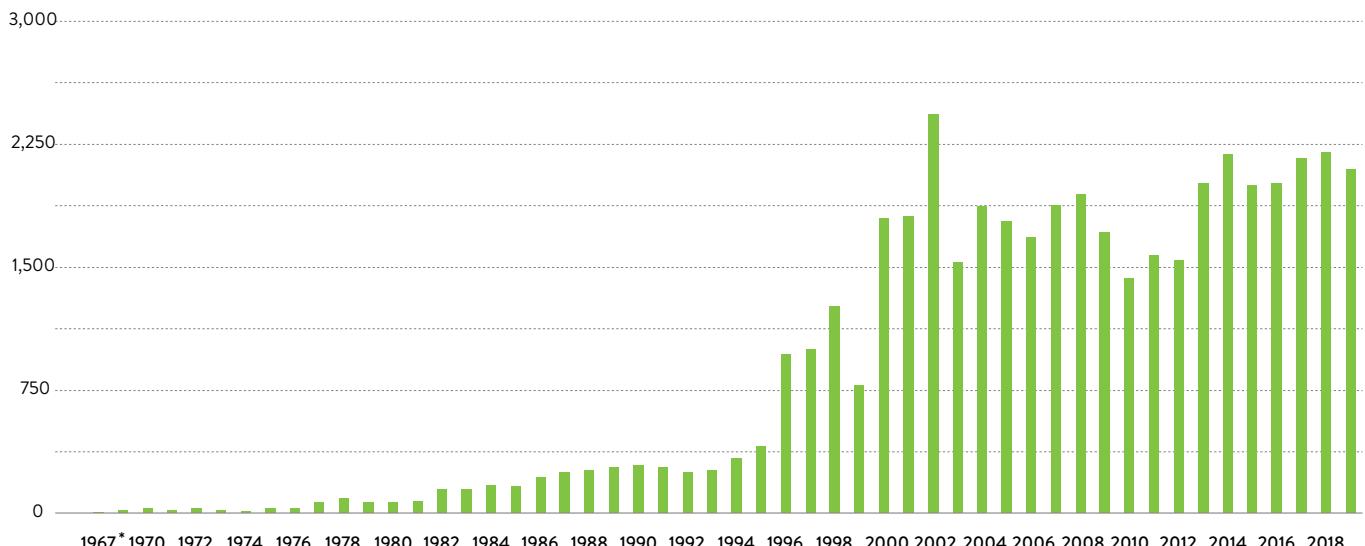

The big impetus to start selecting for marbling and carcase traits came around 1985 when the Japanese market opened up and Australia and the US were head to head for grain-fed beef.

Top: Charlotte and Edward Lawson.

Above: Since 1988 Lawsons Angus have weighed over 37,000 calves and contributed significantly to the development of performance recording in Australia.

LAWSONS TOTAL ANIMALS

It was also the same time Breedplan was released, allowing us to compare animals objectively between herds and years.

THESE TWO FACTORS COMBINED CHANGED THE WAY FORWARD FOR ANGUS CATTLE.

The ability to source sires from New Zealand and the US and the advancement of artificial insemination (AI) and embryo transfer enabled us to select performance sires on a global basis. This led to more rapid, predictable genetic gain.

I trained as an AI technician for the New Zealand Dairy Board and gained some valuable experience with reproductive technologies working for Riverina Artificial Breeders (RAB) for a summer while at University. All of these experiences were valuable tools for the future.

When I returned to the farm in 1994, we set about expanding the herd and moved to 100% AI/ET. In just over 10 years we increased the cow herd from 300 cows to 2,500. We have not used a natural mating bull

in our nucleus stud herd since 1994 and stick to a 45 day joining period. This is important in maintaining selection pressure on fertility, but is also why our contemporary and Breedplan data is so accurate.

The development of ultrasound technology in the early 1990's and the ability to measure intramuscular fat, subcutaneous fat and eye muscle area on live animals greatly enhanced our progress with improvement of carcase traits.

We set up a trial with Melbourne Water and Australian Meat Holdings (AMH) to track over 400 steers from birth and slaughtered them in one day. This is still one of the largest and most significant progeny test programs ever done. It demonstrated unequivocally that ultrasound could accurately rank sires for carcase traits at a younger age on live animals. We have scanned over 25,000 animals since 1989!

Now the big change in Angus cattle is their ability to convert grass more efficiently into quality beef. At the same time, by maintaining our focus on calving ease and moderate mature cow size we have "built" an Angus cow that is still suited to a wide range of production systems in Australia.

GOING FORWARD...

Going forward we will see the leading performance Angus breeders globally continue to evolve. Our focus is primarily on finding optimal performance for traits and using new tools like Feed efficiency and genomics to identify animals that are more productive, more fertile and drought tolerant. In short, our aim is to identify animals that produce more with less. Our new GrowSafe Feed Intake and GrowSafe Beef systems provide a competitive edge for Lawsons Angus clients.

There are many people that have contributed greatly in helping us achieve our goals, none more important than our clients that continue to support us.

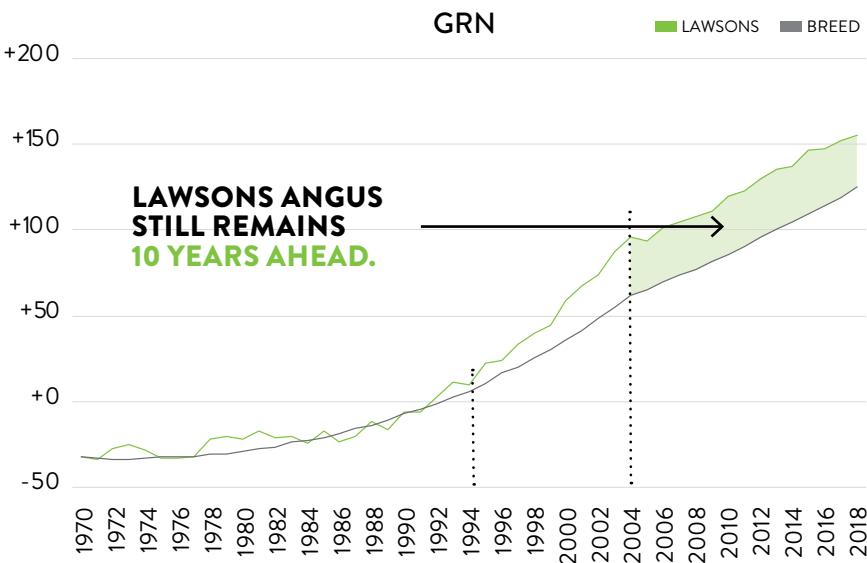

Thank you.

ABOVE: This Lawsons Angus bred steer sired by Paringa Judd J5 was over 400kg carcase weight and marble score 6 with only 17mm subcutaneous (waste) fat after 150 days on feed (high roughage ration).

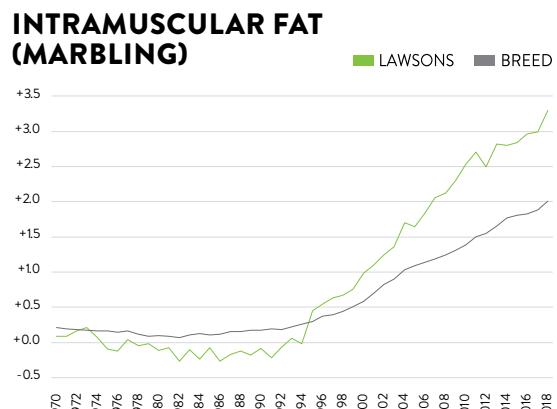

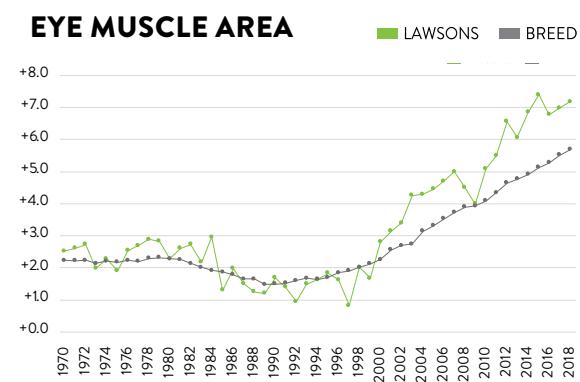

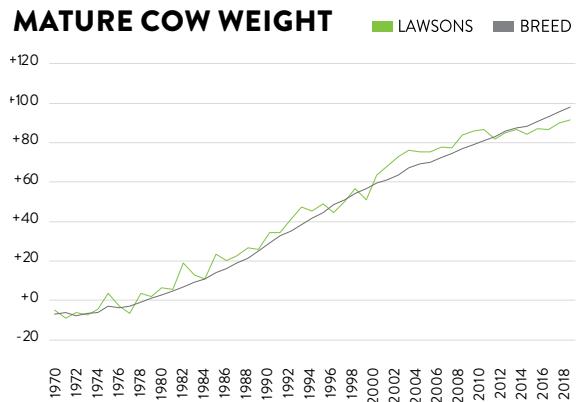

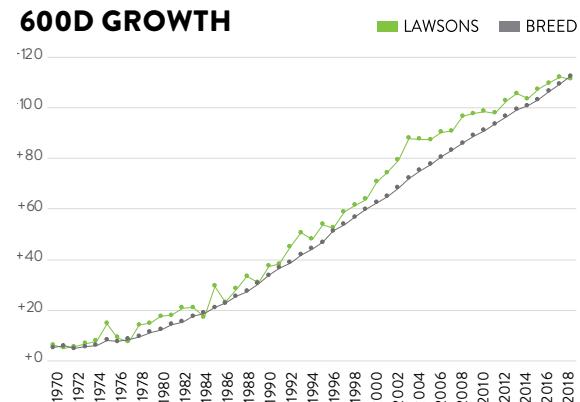

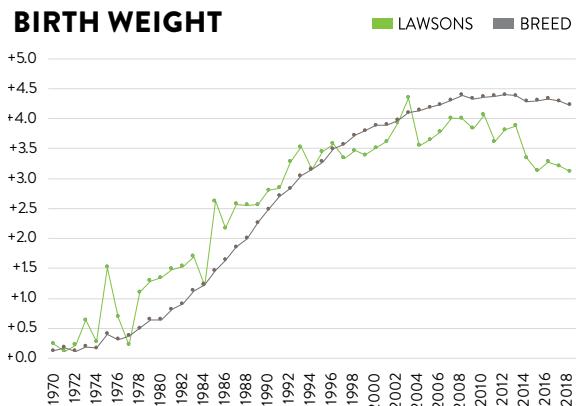

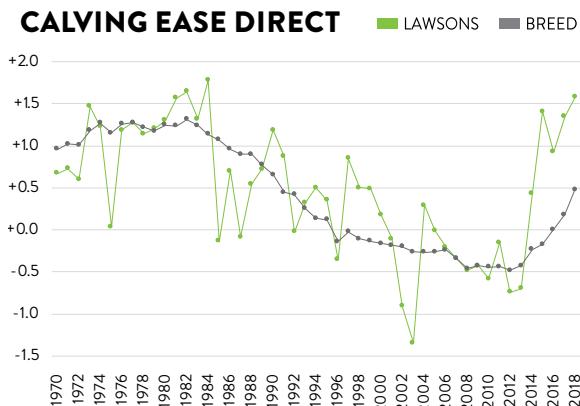

With over 25 years selection for carcase traits Lawsons Angus remain the best source for superior carcase traits. These Sale bulls have the highest marbling of all current bull sales and average in the top 8% of the breed. They are also the highest across all \$ Indexes including Heavy Grain Index (average \$169 for GRN, top 5% of the breed).

The features that really set these Sale bulls apart is their unique combination of calving ease, high growth and moderate cow size, combined with elite carcase genetics.

50 YEARS OF GENETIC DATA PROVES THAT THE SCIENCE IS WORKING. WHEN IT COMES TO SUPERIOR GENETICS, LAWSONS ANGUS IS MILES AHEAD OF THE BREED.

SCIENCE, NOT FICTION

LAWSONS ANGUS ARE NOW TESTING AND SELECTING FOR FEED EFFICIENCY

SINCE 1990, GROWSAFE HAS APPLIED ADVANCED TECHNOLOGY TO MAKE ANIMAL AGRICULTURE MORE EFFICIENT, ECONOMICALLY VIABLE, AND ENVIRONMENTALLY AND ETHICALLY SUSTAINABLE.

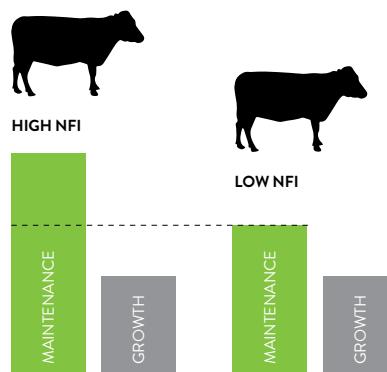

GROWSAFE HAS DEVELOPED AN ADVANCED LIVESTOCK DATA DECISION PLATFORM THAT USES PHYSICAL SENSING, PREDICTIVE ANALYTICS AND COGNITIVE COMPUTING TO MEASURE, MONITOR, PREDICT AND OPTIMISE DECISION MAKING ON FARM. IN 2018, LAWSONS MADE THE INVESTMENT TO JOIN THE GROWSAFE BEEF GENETICS PROGRAM AND START THE JOURNEY OF ON-FARM GENETIC SELECTION FOR FEED EFFICIENCY AS PART OF OUR PROGRAM.

THE PROGRAM

The objective of the Beef Genetics Program is to measure individual animal feed intake with the GrowSafe Feed Intake measurement unit in parallel with growth with the GrowSafe Beef® measurement unit (records partial body weights as animals drink) and calculate Net Feed Intake (NFI) to enable selection for the most efficient animals.

This will help us here at Lawsons Angus to raise better bulls that will help make our customers more money with less resources. Since as much as 75% of all production costs comes from feed, a more efficient calf, cow or bull can save you money all year long.

Net feed intake (NFI) is a measure of feed efficiency that is calculated as the difference between an animal's actual feed intake and its expected feed intake. NFI is independent of body weight and size. Differences in the trait cannot be detected by physically looking at an animal, it requires accurate and simultaneous measurement of an animal's feed intake and body weight. Animals with low NFI values are more efficient than those with high NFI values. These off test contemporary group calculations with 3 generations of pedigree will then be used to calculate NFI EBVs for genetic selection and benchmarking.

MEASURE. MONITOR. PREDICT. OPTIMISE.

Net Feed Intake is a trait that you cannot visually appraise, it must be measured to manage. We started running NFI trials in 2019. The test is a 49 day duration + 10-14 days warm up. Contemporary groups are built post-weaning with similar breed, sex, age (within 90 days), each animal has a unique EID (electronic identification /NLIS) tag that allows the measurement units to identify it.

Animals are fed the same diet and individual feed intake is measured to a 10-gram resolution by the GrowSafe Feed intake measurement units. Partial body weights are taken individually every day, every time the animals come to drink by the GSB measurement unit whose collected data are used to calculate individual predicated daily live weights. Routine weights are collected when animals are handled and this data is correlated during the trial to add to the accuracy and validation of GSB units. The data is collected in a standardised way and at the end of the trial, GrowSafe's analytics team calculate individual DMI, ADG and NFI for the cohort as well as providing the genetic evaluations.

FEED EFFICIENCY: IF YOU DON'T MEASURE IT, YOU CAN'T MANAGE IT.

366 KG	WEIGHT	325 KG
1.24 KG/D	ADG	1.23 KG/D
9.58 KG/D (708 KG)	EXPECTED FEED INTAKE	9.29 KG/D (688 KG)
11.04 KG/D (817 KG)	ACTUAL FEED INTAKE	7.95 KG/D (588 KG)
1.46 KG/D (+108)	DIFFERENCE	-1.34 KG/D (-99.2)

Lawsons Angus Feed Intake Unit at "Claremont", Yea, Victoria. We continue to test groups of 64-80 bulls for a period of 60 days. This provides us with accurate rankings of individual bulls (and sires) for dry matter intake, feed conversion and average daily gain. This information will allow us to improve feed efficiency and Net Feed Intake (NFI) over time. Net feed intake (NFI) is a measure of feed efficiency. NFI is calculated as the difference between an animal's actual feed intake and it's expected feed intake. This feed intake data will be used in our mating decisions to help us breed more efficient bulls that make our commercial clients more money. And yes, more efficient cattle in this testing system are more efficient in the feedlot and on grass!

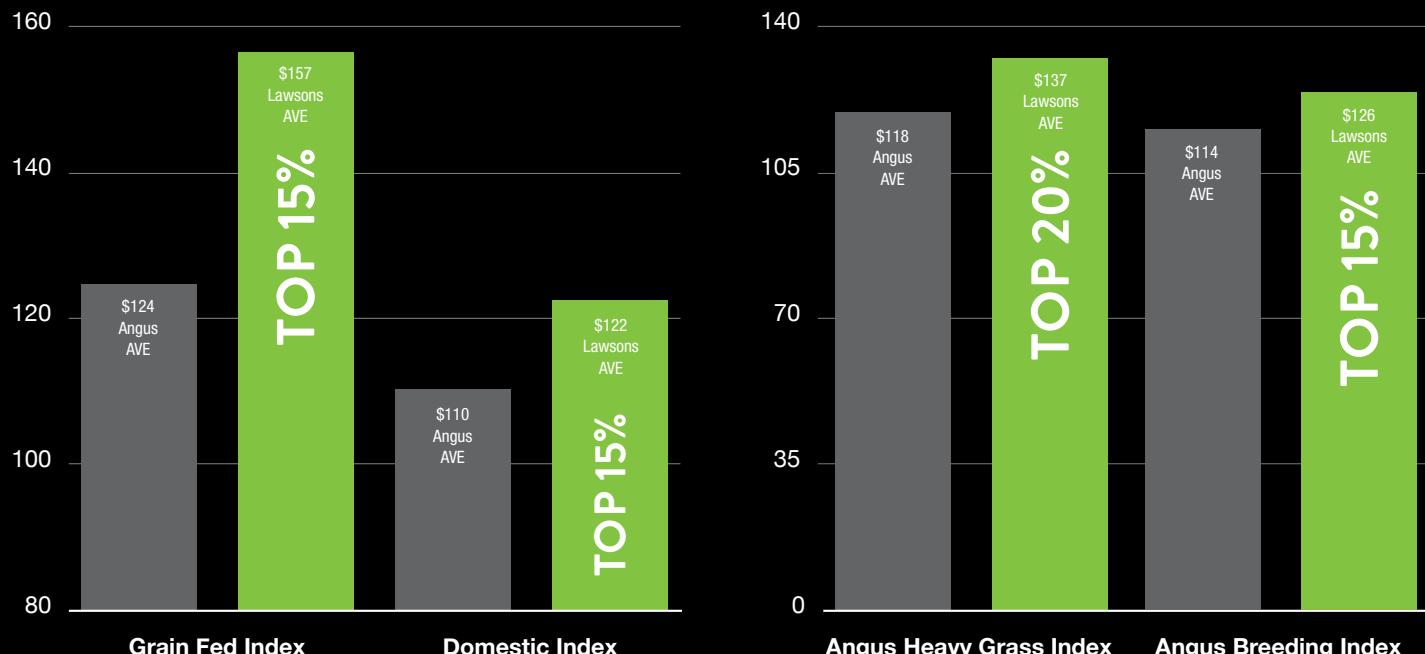

GrowSafe beef (GSB) units measure body weight allowing us to record weights on a daily basis – this is a powerful management tool allowing us to track individual and group performance in real time.

HOW DO **LAWSONS ANGUS** **ROMA BULLS** COMPARE TO THE ANGUS BREED AVERAGE?

THESE ROMA SALE BULLS EXCEL ACROSS ALL KEY ECONOMIC TRAITS. THEY ARE UNIQUE IN THEIR BALANCE OF CALVING EASE, HIGH GROWTH, MODERATE MATURE COW SIZE AND UNMATCHED MUSCLE AND HIGH MARBLING POTENTIAL.

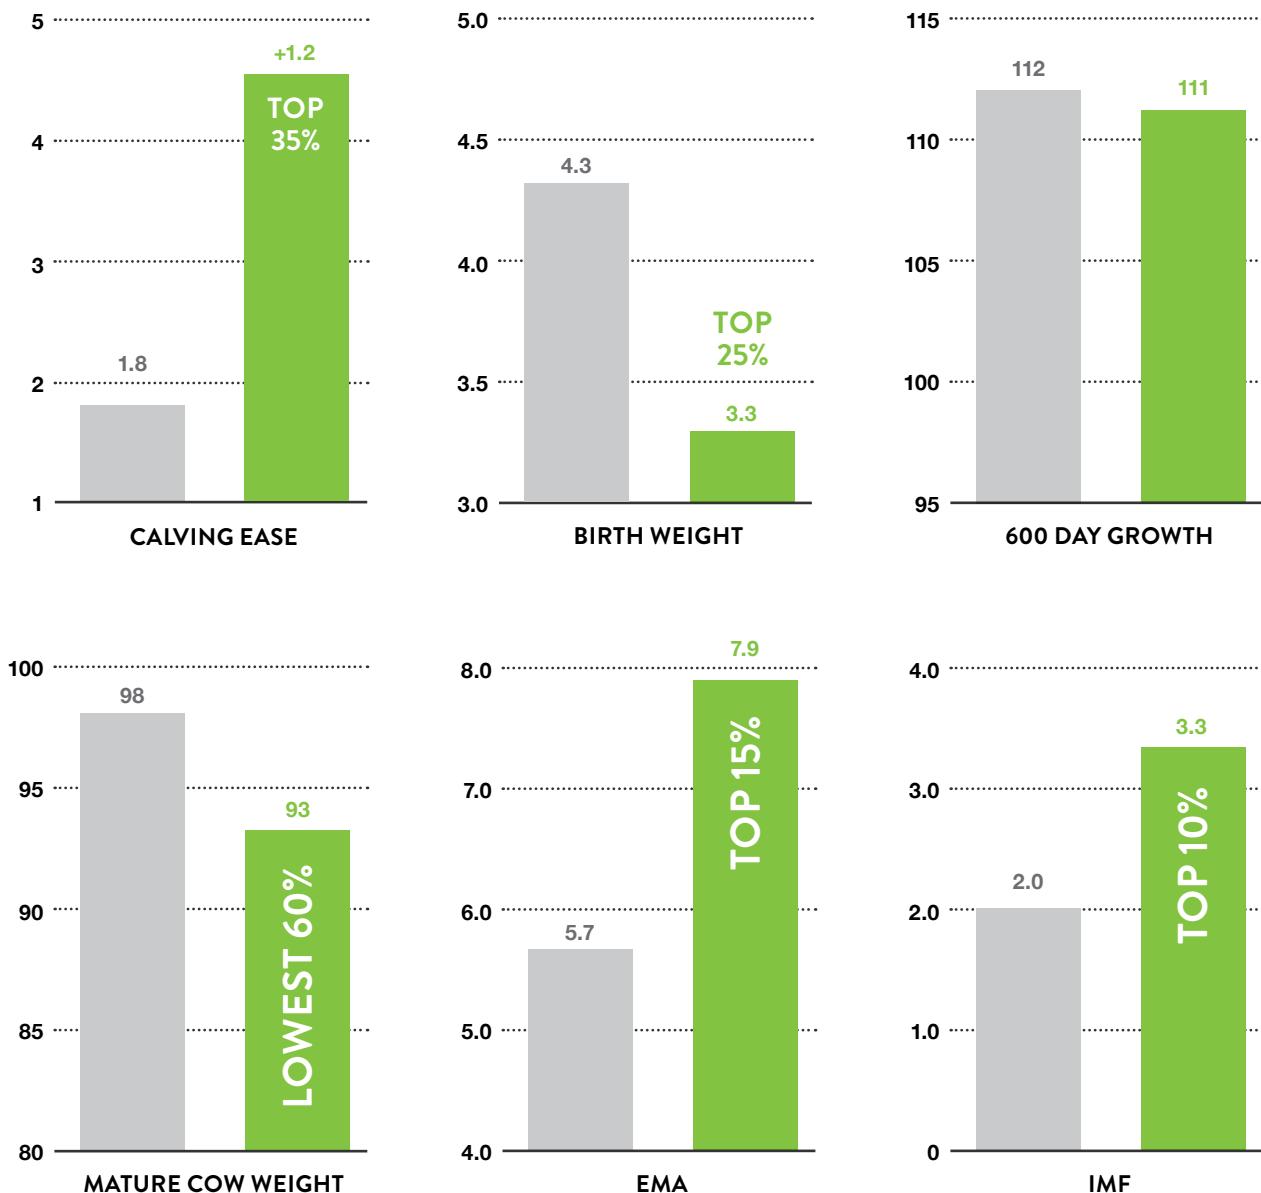

Lawsons 2020 Sale bulls Breed average

LAWSONS ANGUS ROMA SALE BULLS

REFERENCE SIRES

AYRVALE BARTEL E7

Still the one to beat! Bartel is possibly one of the breed's greatest ever sires and was purchased by Lawsons Angus and syndicated as an 18 month old bull. Bartel E7 has been one of the most widely used sires in the Angus breed and was the highest MSA Index bull in his cohort in the Angus Sire Benchmark Program (ASBP). No other sires matches his unique growth curve, calving ease and his proven high end carcass merit.

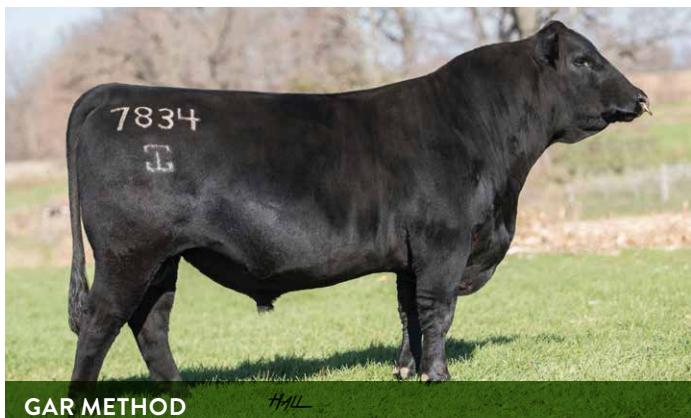

LAWSONS MOMENTOUS M518

Momentous is an exceptional son of Momentum, outstanding individual that excels in every part of the supply chain. Momentous has been widely used by Lawsons Angus and a popular sire at Genetics Australia. Super sound and exceptional temperament and out of one of our elite donor dams.

GAR MOMENTUM

Momentum is now regarded as one of the breeds elite calving ease, high carcass merit sires, progeny are stout, moderate frames with exceptionally high EMA and marbling. Sires moderate fertile, easy calving daughters that set the bar for cow efficiency and elite carcass genetics.

GAR METHOD

HML

New sire from Gardiner Angus Ranch, son of Momentum with massive growth and EMA. Progeny are wide-topped and attractive phenotype.

RENNYLEA KODAK K522

Kodak is now a highly proven elite carcase and calving ease sire, one of the highest IMF bulls in the breed. Pedigree includes Lawsons Henry VIII Y5, the dam of Regent and Edmund.

GAR PROPHET

Prophet sets the frontier in modern beef production with phenomenal growth curve, moderate cow size and easy calving. This combined with Prophet's elite carcase genetics and excellent disposition and structure provides the next step for progressive breeders.

GAR PROPHECY

GAR prophecy, is a Prophet son with high growth high end carcase merit, dam an elite B/R Ambush 28 daughter.

GAR SUNRISE

Sunrise combines calving ease, solid growth, incredible end-product merit and with high accuracy. A strong spread from BW to 600D of +4.0 to +138 for 600D EBV and still moderate cow size and exceptionally functional, attractive daughters. A strong spread from birth weight (BW) of +4.0 to +138 for 600D Growth and still moderate cow size and exceptionally functional, attractive daughters.

ALLOURA GET CRACKING G10

G10 progeny are exceptionally stout, sound moderate frame size. Perfect for production of high quality beef and efficient cows. Get Cracking is one of the elite proven carcase sires and a graduate of the Angus Sire Benchmarking Program (ASBP). Unmatched combination of high IMF (+5.0) and massive EMA (+13.6 EMA), Get Cracking is one of the highest marbling bulls in the Angus breed. G10 had 21 steers in Cohort 4 that went through the ASBP long-fed program at Rangers Valley, his steers were ranked 2nd for MSA Marbling (average MSA marble score of 571) and 4th ranked for EMA at 85.8 sq cm EMA.

PARINGA JUDD J5

Judd was purchased by Lawsons Angus and Shaanxi Kingbull (China) as a yearling. Judd has proven himself in our tough contemporaries to match it with the big boys. Progeny are deep bodied, super attractive, slick coated and have exceptionally sound structure. Judd daughters are more moderate than both Berkley and Regent and are showing they can handle the pressure of our system with high stocking rates and large contemporary groups.

LAWSONS LINKEDIN L483

Unbelievably good looks, structure and powerful growth sire. LinkedIn is massively built, yet still so moderate in stature. L483's is right up there as possibly the most powerful calving ease bull the Angus Industry has seen. Hardly surprising when you consider the pedigree of Judd x Ayrvale Bartel E7. Purchased by Robbie Payne, King Island and now has 447 progeny in 10 herds so his calving ease is now rock solid as he has been progeny tested against the best proven performance bulls in the breed.

YADI 63

HPCA Yadi 63 is a high growth GAR New Design 5050 son.

Rock solid E7 x Novak. These cattle are tough, fertile and elite performance bulls that have had 50 years of selection under high stocking rates and short breeding seasons. People often think they can select animals by solely by eye and underestimate the value that lies in the breeding program behind seedstock herds.

POWERFUL REASONS TO USE LAWSONS ANGUS TO IMPROVE YOUR PROFITABILITY

1.

VALUE AND SERVICE

Lawsons Angus produce large numbers of progeny bred from the best balanced Angus sires sourced globally. All bulls are backed by a 3 Year Guarantee and are independently assessed for structure and fertility. Genetic progress is predictable and cost effective at Lawsons Angus.

2.

CALVING EASE, HIGH GROWTH AND MODERATE FERTILE FEMALES

Lawsons Angus genetics give you calving ease, high growth, high feed conversion, high fertility and moderate cow size. Lawsons Angus manage their breeding herd in large contemporary groups under high stocking rates with a disciplined, practical breeding program based on sound science, not fiction.

3.

VALUE IN THE FEEDLOT AND ON THE RAIL

Lawsons Angus have been focusing on meat quality for over 30 years. Lawsons Angus are bred to use energy (feed) more efficiently with more taste fat (marbling) and less waste fat (subcutaneous fat) resulting in a significantly higher yield and end value product that creates more value in every part of the supply chain.

SALE CONDITIONS

BUYERS REBATE

Rebate of 2% is available to outside agents settling on behalf of buyers within 7 days. Buyers must be introduced via email to either Andrew Holt, Nutrien Ag Solutions Roma andrew.holt@nutrien.com.au or lawsons@lawsonsgangus.com.au or in writing prior to Sale day. All agent rebates and settling arrangements are to be confirmed on bidding cards on Sale day and agreed to by Nutrien Ag Solutions Roma.

DELIVERY OF SALE BULLS

Lawsons Angus and Selling Agents will do our best to assist in the efficient and safe delivery of your bulls. Buyers, please ensure bulls are insured at the fall of the hammer as our insurance does not cover injury of bulls in transit. Buyers must organise cartage of bulls at their own expense.

REGISTRATION STATUS AND TRANSFER OF BULLS

Most bulls on offer are Registered Herd Book animals with the Angus Society of Australia (ASA). Registration status of bulls is shown in the catalogue. 'H' indicates the animal is registered in the ASA Herd Book, 'A' indicates bulls are registered with ASA Performance Register (APR). All bulls will be transferred to purchaser at no cost on request. Non-transfer commercial bulls are denoted 'NT' or 'COM' status.

HEALTH STATUS OF BULLS

All bulls have been independently semen and morphology tested including a physical evaluation of the bulls reproductive tract.

All bulls offered in this Sale have been vaccinated with Ultravac 7 in 1, Vibriosis, Pesti Guard (BVD), tick fever and 3-day sickness.

All bulls are JBAS-6 status.

3 YEAR BULL GUARANTEE

All bulls have undergone rigorous and independent assessments for fertility, including a semen test and physical evaluation of the bulls reproductive tract. On top of this we offer the strongest guarantee of any seedstock herd in Australia.

All breeding cattle sold by Lawsons Angus are fertile and structurally sound to the best of our knowledge. If a bull becomes infertile or breaks down due to reasons other than injury or misadventure, at any time in the next 36 months, we will:

1. provide you with a satisfactory replacement if available, or
2. issue you with a credit equal to purchase price minus salvage value, that may be used to purchase any animal in future Lawsons Angus sales.

The Lawsons Angus 3 year bull guarantee is not a life insurance policy. Normal care needs to be taken as we cannot replace an animal that is injured or dies for any reason. We recommend you insure animals against injury. An insurance service will be available on Sale day.

This guarantee is in addition to normal terms and conditions governing auction sales, and as such the discretion and final decision as to issuing a credit will be with the vendor. Any credit will be limited to bull purchase price less salvage value and not include any costs, damages or loss of income incurred as a result of claims under this guarantee.

**OUR 3 YEAR BULL
GUARANTEE IS THE
GREATEST
WARRANTY
PROVIDED BY ANY
SEEDSTOCK HERD
IN AUSTRALIA.**

CALVING EASE

We have included a red tick in summary pages and individual catalogue information for bulls that we recommend are suitable to use in most situations over yearling heifers. Most of these bulls are ≥ 1.8 for Calving Ease Direct (DIR) and less than breed average birth weight (≤ 4.3 Birth Weight EBVs). We believe this combination gives you the best risk management guide for selecting bulls to mate yearling heifers and simplifies the information so that you can focus on improving other key economic traits. We urge breeders not to over analyse this information and narrow down selection options as is often the case. There are a few exceptions that we have made to these EBVs criteria, but we believe these bulls to also be safe calving ease candidates. Individual herds may use bulls outside this recommended range depending on their maternal herd and production system, but these are our recommended 'safe' heifer specifications and they are working well for commercial beef herds. We also recommend you talk to us about helping to develop a pre-calving heifer **management** plan that can be used in conjunction with these EBV specifications to achieve predictable calving ease and rebreeding results for two year old heifers. Remember management of heifers is equally important as the **genetic** potential of the sires and dams to optimise calving and reproductive performance of heifers.

DISCLAIMER

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, neither the vendor, Angus Australia or the selling agents assume any responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information. Buyers should also note other Sale Conditions listed on this page including those under "3 Year Guarantee".

A BRIEF DESCRIPTION OF EBVS AND \$INDEX VALUES

The following is a brief description of EBVs and \$Index values and Accuracies. For a more detailed explanation please refer to Angus Society of Australia web site (www.angusaustralia.com.au).

ACCURACY (%) ~ Provides an indication of the reliability of an EBV. As more performance information becomes available on an animal (or it's progeny, or relatives) then the accuracy of it's EBVs for particular traits will increase.

CALVING EASE DIR (%)
~ Estimates of the genetic differences between animals in the ability of their calves, from 2 year old heifers, to be delivered without assistance.

CALVING EASE DTRS (%)
~ Estimates of the genetic differences between animals in the ability of their 2 year old daughters to calve without assistance.

GESTATION LENGTH (DAYS)
~ Estimates of the genetic differences between animals in the number of days from the date of conception to the calf birth date.

BIRTH WT (KG) ~ Estimates of the genetic differences between animals in calf birth weight.

200-DAY WT (KG) ~ Estimates of the genetic differences between animals in liveweight at 200 days of age.

400-DAY WT (KG) ~ Estimates of the genetic differences between animals in liveweight at 400 days of age.

600-DAY WT (KG) ~ Estimates of the genetic differences between animals in liveweight at 600 days of age.

MATURE COW WEIGHT (KG) ~ Estimates of the genetic differences between animals in cow weight at 5 years of age.

MILK (KG) ~ Estimates of the genetic differences between animals in milk and animals in percentage retail beef yield, in a 300kg carcase.

INTRA-MUSCULAR FAT % (IMF%) ~ Estimates of the genetic differences between animals in percentage intra-muscular fat (marbling) at the 12/13th rib site, in a 300 kg carcase.

ANGUS BREEDING INDEX
~ Estimates the genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals

that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems. The index is particularly suited to commercial producers who sell progeny into different markets, or to seedstock producers supplying bulls to commercial clients who produce for a range of different production systems and market end points.

DOMESTIC INDEX ~ Estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade, with progeny finished using either grass, grass supplemented by grain or grain finishing systems.

HEAVY GRAIN INDEX ~ Estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 200 day feedlot finishing period for the grain fed high quality, highly marbled markets.

HEAVY GRASS INDEX ~ Estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished heavy steers.
