BURENDA

Angus

Welcome to the Burenda Angus & Brangus Annual Roma Bull Sale

It is with great pleasure we offer 123 well grown good Angus & Brangus bulls at our twelfth Annual Roma Bull Sale. The spectacular offering will comprise of **92** 2 year old's and **31** 18 month old's. And for the first time we will be offering 12 Burenda Black Brangus bulls as Lots 112 to 123. Genetically these bulls represent some of Queensland's best bulls on offer with progeny by some of Australia's best AI sires together with several outstanding Burenda sires. Of the **111 catalogued Angus bulls 90% are better than breed average for Angus Breeding, Domestic, Heavy Grain and Heavy Grass.** 11 of the 12 Brangus Bulls are all above breed average and have some significant EBV grunt. A large number of both breeds of bulls are in the top 20% for their breeds. For your convenience we have shaded the EBV's of each sale lot in the **top 10% blue** and **top 20% yellow.** These bulls are bred in Queensland under commercial conditions and come with a full 2 year fertility guarantee which is detailed in the sale information pages in this catalogue.

As you all know we were faced with some tough decisions in 2019 regarding the economics of feeding and selling cattle in a tough environment. Burenda opted to production feed our breeders and followers through to Christmas 2019 with the idea in mind that if we needed to, we could sell good conditioned cattle well on a sluggish market. We started with our commercial cows and then reduced the Angus & Brangus Stud herds down to 1000 breeders. We were well rewarded with several B-Doubles of females bringing averages just over \$2000/head. It was a hard decision to make as the majority of these cows were pregnant. However, the remaining cows have not looked back and are looking terrific and back out on agistment doing what commercial cows should be doing. By the time you read this the cows will be back at "Dalby Downs" calving.

As part of our survival plan, we early weaned all our calves at 2-4 months of age with an average weight of 170kg. This enabled us to try and feed them the appropriate level of nutrition to maintain growth and health. Since weaning in December 2019 most weaners have averaged

1kg/day before the rain and now are well over this. The cows were pregnancy tested early to identify the AI and 1st cycle pregnancies which we kept and put on maintenance rations. Later pregnancies females were sold. Over the last 15 years we have made good gains on fertility and progeny performance by being tough on fertility and temperament. Both of these traits are directly related to performance in the herd and there is no doubt the Burenda herd has benefited by the high standards we set ourselves for these two traits. Fertility is crucial and this with adequate nutrition we believe plays a lot bigger part in the breeding philosophy and performance of a herd than we all would like to believe. The Burenda pregnancy testing rate this year is the lowest in 16 years at 89% which we feel is still very good as mother nature hasn't exactly been kind to them at joining time late last year.

Walking a group of 400 weaner bulls to the yards for drafting & weighing into two groups and onto fresh grass & Leucaena paddocks..

We have again included the actual calving interval or ACI in our catalogue comments for those that use this information. Most lots have good ACI's of around 365 days. There are also others marked as Donor (AI ET), sold and 365/recipient. The recipient means his dam has had both natural and embryo calves. The majority of our females are younger due to the herd reduction and as we find these cows have the improvements of fertility, calving ease, growth, and carcass data that we are looking for. Our improvement in EBV's has been very noticeable in both our cows and the 2020 sale bulls. The combination of improvements in the fertility, EBV's, genomics and raw data performance within the Burenda herd has led to improved profitability through attention to these genetics. We aim to run the Burenda females as if they were a commercial beef herd which gives us confidence that the sires we sell, will produce progeny that can perform in the QLD environment and still meet market acceptability.

Burenda has always used DNA verification where needed over the years and in the last 4 years all Angus & Brangus progeny born have now been parent verified to a sire and a dam where possible and then had genomics incorporated into the EBV's. We have seen a slight improvement in our EBV's and a significant lift in the accuracy of these figures. Over the next few years we expect to see some good changes occurring in our breeding for better commercially focused carcass animals. Within 5 years we expect the entire Burenda female herd to have a DNA,

Mustering springing Angus cows to truck home in July for calving at "Dalby Downs". This enables us to record the birth date, birthweight and dam of each calf and collect a DNA sample.

genomics, and genetic defects profile. Some of this year's sale bulls are not genetic defect tested and our thoughts on this are that we have far more important influences that we can control in the breeding productivity of the average commercial herd such as a good vaccination program for Vibrio, Botulism, Tick Fever, 3 Day Sickness, Pestiguard, and calf scours coupled with good nutrition. Any of these can cause a significant financial loss to a producer more so than the rare incidence of a genetically affected calf. We can make better productivity gains by focusing on more economically important elements of our businesses.

Manager Jonathan Schmidt has the bulls in great shape and they are doing well on the oats. There are photos of many of the bulls on our website. Please contact Jonathan on 0429 067 313 for any further details. Auctions Plus will be active again this year with Live Streaming attached for those unable to make the sale and who would like to see the bulls go through the ring. Our insistence on breeding for fertility, growth and carcass quality is paying dividends. We believe buyers will be impressed when they assess this year's draft. The 2 year old bulls will average over 840kg and have plenty of length, strength and fleshing ability. The catalogue includes 89 sires suitable for use on heifers. Please view full details of each bull on our website www.burendaangus.com.au and remember - you are always welcome at Burenda to check out our herd and operation.

SALE INFORMATION

Sale location and inspection times

The Burenda Angus Bull Sale 2020 will be held at the Roma saleyards, Warrego Hwy Roma Qld 4455. Sale time is 11:00am and inspections can be made from 8am on sale day. We will also be at the yards the day before if you are in the area for early inspections.

COVID-19

Due to the current situation with COVID-19 Burenda Angus & Brangus would like everyone to still feel free to attend the sale in person, but please do so under the best practices of hygiene and social distancing. The Roma Saleyards and the Maranoa Council have procedures in place at the yards which we are to abide by. At the time of printing the catalogue the Roma Saleyards will allow 96 bidders into the new sale complex. Hence it may well be that families and partners may be unable to view the sale in person. Similarly, on inspecting the bulls in the pens we need to consider others and follow the social distancing guidelines. If feeling unwell we recommend to stay at home and use Auctions Plus for any purchases or contact your agent or myself on 0429067313. Hopefully by the time the sale comes around we will be getting back to normal.

Identification

All bulls have NLIS tags, lot numbers and freeze brands.
The Burenda PIC number is QAWB0619
All bulls are registered with the Angus Society of Australia

Safety Rules & Recommendations

We are confident all our bulls offered for sale are quiet and of sound temperament and are used to being handled in yards. However sale day brings a differing set of conditions and the bulls are subjected to unusual levels of noise and pressure with many people invading their space. Even the quietest bull is still an unpredictable animal who can misbehave. Visitors entering pens do so at their own risk and are subject to conditions set out by the Roma Saleyards.

Buyer Registration

A buyer registration system will apply. Please register with the selling agent well before the auction commences.
AuctionsPlus will be running in conjunction with this sale and registration must be completed within the conditions set out by AuctionsPlus. For these terms and conditions please visit www.auctionsplus.com.au

Sale Conditions

All lots will be sold subject to the usual conditions governing auction sales which will be displayed on the day and are detailed in the back of this catalogue. The auction price is **exclusive of GST**

Rebate

The vendor has agreed to allow 6% rebate to outside agents introducing the approved buyers no later than 24 hours prior to the sale, accompanying their buyer to the sale and settling on their behalf within 7 days of the sale. For outside agents introducing approved buyers within 24 hours prior to the sale **BUT NOT** attending the sale with their clients, a 3% rebate will be paid.

Delivery and Transport

Free transport and delivery to selected Major centres is available by negotiation with Burenda Manager Jonathan Schmidt after the sale has concluded.

Genetic Defects

At the time of printing of the catalogue Burenda had tested lots 41 to 64 and they were all free of defects. The remaining lots 1 to 40 & lots 65 to 111 are not tested and have low percentages which we consider the risk is minimal. As I have mentioned previously there is more to be gained financially from improving nutrition and fertility than avoiding good sires that have a percentage on a defect.

Health Treatments

All Burenda Angus Bulls presented at the sale have been treated for the following :
Pestiguard Vaccine, 7-in-1 Vaccine, Botulism Vaccine, 3 Day Sickness, Vibrio Vaccine, Tickfever Blood, and pre treated for lice.
Burenda has a JBAS score of 7. Bulls are free to travel to WA & NT.

INSURANCE

Ownership passes at the fall of the hammer. Insurance can be arranged on the day through GDL or your own agent

Breeding Soundness & Semen Test

All bulls have been semen & morphology tested and passed satisfactorily for soundness by John Chapman of South East Qld Genetics. Full details will be available on sale day

Raw Data

All bulls will be selling with full information on weights, scrotal measurements and ultrasound scanning details. Enquiries prior to the sale regarding raw data can be made by contacting Jonathan Schmidt on 0429 067 313 also raw data will be posted on our website prior to sale day at www.burendaangus.com.au

Semen Interest In Bulls

Burenda will retain a half interest in any semen sold from bulls in this sale. Because Burenda sells most of their top bulls it is possible they may wish to collect semen at some future date for their own use or for sale. This is a revenue sharing opportunity for buyers. We retain the right to access bulls at a negotiated time and place and at Burenda's cost. Owners have the right to use their half share in their own herds or revenue share with Burenda in semen sold to other users.

2 Year Guarantee

In addition to the standard warranties provided in stud stock auction terms, Burenda is proud to provide a 2 year guarantee for all bulls sold at this sale. We warrant that the bulls are fertile and capable of natural service at the time of the sale. Should a bull become infertile or break down within 2 years for reasons other than injury or misadventure from 26th August 2020 Burenda will:

1. Provide you with a satisfactory replacement
OR
2. Provide you with a credit equal to the purchase price of the bull less salvage value and less seasonal value. This credit may be used at any future Burenda Bull Sale.

Burenda WILL require you to provide a veterinary report.

IMPORTANT NOTICES FOR PURCHASERS

SALE CATALOGUE DISCLAIMER

All reasonable care has been taken by the vendor to ensure that the information provided in this catalogue is correct at the time of publication. However, neither the vendor nor the selling agents make any other representations about the accuracy, reliability or completeness of any information provided in this catalogue and do not assume any responsibility for the use or interpretation of the information included in this catalogue. You are encouraged to seek independent verification of any information contained in this catalogue before relying on such information.

DNA PATERNITY VERIFICATION

It is a requirement of Angus Australia that all bulls used to sire calves for registration in the Angus Australia Herd Book Register, Red Angus Register or Angus Performance Register must have been DNA paternity verified if they are born in or after the 'Y' year (2003). Buyers intending to use bulls listed in this catalogue to produce calves to be registered in these registers should obtain DNA paternity verification on those bulls before they are used for breeding.

PRIVACY INFORMATION

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

DNA Suffix Explained

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA

SV : the sire has been verified by DNA

DV : the dam has been verified by DNA

: DNA verification has not been conducted

E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

BUYER'S OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO THE ANGUS AUSTRALIA

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its databases and disclosing that information to its members on its website.

I, the buyer of animals with the following registration numbers from member (name) do not consent to Angus Australia using my name, address and phone number for the purposes of effecting a change of registration of the following animal(s) that I have purchased, maintaining its databases and disclosing that information to its members on its website.

Signature:

Date:

Please forward this completed consent form to Angus Australia, Glen Innes Road, Locked Bag 11, Armidale NSW 2350. If you have any queries, please telephone 02 6772 3011 or e-mail office@angusaustralia.com.au.

UNDERSTANDING ANGUS BREEDPLAN EBVs

What is Angus BREEDPLAN?

Angus BREEDPLAN is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. Angus BREEDPLAN uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

Angus BREEDPLAN includes pedigree, performance and genomic information from the Angus Australia and New Zealand Angus Association databases to evaluate the genetics of animals across Australia and New Zealand.

Angus BREEDPLAN analyses are conducted by the Agricultural Business Research Institute (ABRI), using software developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England. Ongoing BREEDPLAN research and development is supported by Meat and Livestock Australia.

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

Using EBVs to Compare the Genetics of Two Animals

Angus BREEDPLAN EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals in Australia and New Zealand.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to:

- ◆ the breed average EBV
- ◆ the percentile table

The current breed average EBV and percentile table is provided in these explanatory notes.

Considering Accuracy

An accuracy value is published in association with each EBV, which is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50- 74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of Angus BREEDPLAN EBVs

EBVs are calculated for a range of traits within Angus BREEDPLAN, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this sale catalogue is provided on the following pages.

BIRTH

Calving Ease Direct	(%)	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
Calving Ease Daughters	(%)	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
Gestation Length	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
Birth Weight	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.

GROWTH

200 Day Growth	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
400 Day Weight	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
600 Day Weight	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
Mature Cow Weight	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.

FERTILITY

Days to Calving	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
Scrotal Size	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.

CARCASE

Carcase Weight	kg	Genetic differences between animals in hot standard carcass weight at 750 days of age.	Higher EBVs indicate heavier carcass weight.
Eye Muscle Area	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
Rump Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
Retail Beef Yield	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
Intramuscular Fat	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.

FEED EFFICIENCY

Net Feed Intake (Feedlot)	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
----------------------------------	--------	--	---

TEMPERAMENT

Docility	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
-----------------	---	---	--

STRUCTURE

Front Feet Angle	%	Genetic differences between animals in desirable front feet angle (strength of pastern, depth of heel).	Higher EBVs indicate more desirable structure.
Front Feet Claw Set	%	Genetic differences between animals in desirable front feet claw set structure (shape and evenness of claw).	Higher EBVs indicate more desirable structure.
Rear Feet Angle	%	Genetic differences between animals in desirable rear feet angle (strength of pastern, depth of heel).	Higher EBVs indicate more desirable structure.
Rear Leg Hind View	%	Genetic differences between animals in desirable rear leg structure when viewed from behind.	Higher EBVs indicate more desirable structure.
Rear Leg Side View	%	Genetic differences between animals in desirable rear leg structure when viewed from the side.	Higher EBVs indicate more desirable structure.

SELECTION INDEXES

Angus Breeding Index	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems.	Higher selection index values indicate greater profitability.
Domestic Index	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade.	Higher selection index values indicate greater profitability.
Heavy Grain Index	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 200 day feedlot finishing period for the grain fed high quality, highly marbled markets.	Higher selection index values indicate greater profitability.
Heavy Grass Index	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers.	Higher selection index values indicate greater profitability.

Genesis has well over 2354 progeny recorded in a very short space of time due to the merit of his carcass traits. One of a few sires around with all EBV traits where we would like them. He has been easy to use over all cows. Ten traits that count in the top 10% are gestation length, 200, 400 & 600 day growth, milk, mature cow wt, scrotal, carcass weight EMA & rib fat. Producing outstanding ABI, DOM, GRN & GRS index values all in the top 10%. 10 Sons Lots 3,6,13,38,47,48,49,50,61 & 85.

The EBV's seem out of sink with the quality of the sire. But on visiting King Island I felt we needed to pursue this Raff sire as he is something special. He is a very long, clean coated, an easy walking bull with doing ability. Over 373 registered progeny amongst some good breeders. 4 Sons Lots 5,26,35 & 43.

Maximise the potential of your livestock with MegaMin

Helping Australia Grow

AgSolutions Australia are dedicated to helping all aspects of your operation from helping soil, helping plants, helping animals and helping people.

Products and services available:

Livestock Supplements (including USDA/NOP Compliant Blends for the organic market), Feed Ration/Ingredient Testing, Feed Ration Formulations, Mineral Fertilisers and Soil Conditioners, Soil Testing, and Soil Management Programs.

FREE Ration Formulation Service for all grain and grain assist diets!*

Our nutrition team can review your current rations for early weaning, backgrounding, bulls, feedlot, dairy heifers, sheep and lambs.

*Ration Formulation Service is only available to customers who purchase from the MegaMin Livestock Supplement Range.

“ We value the information and advice that Paul Pritchard from AgSolutions has provided in both paddock supplementation, feedlot rations and with soil improvement.

We place emphasis on the minerals in MegaMin to ensure that our stock have a constant plane of nutrition for consistent growth.

In winter on green feed and pre-calving we switch to MegaMin Extra Magnesium as it has improved the ease of calving, especially with the heifers.

There has been an improvement in growth on bulls when grazing oats and being supplemented with MegaMin Extra Magnesium Sweet.

-Jonathan Schmidt, Manager at Burenda Angus

”

Burenda Angus and Brangus are proud users of MegaMin Livestock Supplements and NatraMin Mineral Fertilisers and Soil Conditioners.

For a hassle free calving over maiden heifers choose sires with positive calving ease, short gestation and average to lower birth weights. The lots marked in red on our supplementary sheet are our first choice for use over heifers and the one's in blue are our 2nd choice. The figures on the blue ones are not ideal but knowing the pedigree will be suitable. A client recently mentioned they calved out unassisted 100 heifers to Burenda Angus bulls with no cow losses and branded 96 calves.

BURENDA BLACK BRANGUS BULLS

LOTS 112 TO 123

This offering of 12 Burenda Black Brangus Bulls with Angus contents of 63% to 84% will be part of our Annual Roma Bull Sale from 2020 onwards.

These bulls we feel offer some improved traits for adaption to the challenging environments in Western, Central and Northern Queensland. We feel they will be more suited to handle the humidity, heat, buffalo flies, cattle ticks, nutritional variation in the seasons and will have the ability to browse shrubbery.

These traits are important for them to survive and yet they still carry the quality Angus traits for fertility, calving and carcass merit. The Burenda plan is to long term offer Burenda Black Bulls that are all homozygous poll and black, docile with good structure and fertility and have the support of the best EBV's on offer.

If you require more Burenda Blacks we offer 45 two year old bulls at our Annual Clermont Bull Sale on the 8th October 2020 and will provide transport back to Roma if required.

EBV Quick Rference for Burenda Roma Bull Sale | April 2020 Brangus Group Breedplan

NATIONAL VENDOR DECLARATION (CATTLE) AND WAYBILL C0413 23268039

This form cannot be used where eligibility for the EU market is required.

Part A To be completed by the owner or person who is responsible for the husbandry of the cattle.

Owner of cattle: Burenda Hldgs Pty Ltd

Property/place where the journey commenced: Palmy Downs 203 Square Top Rd Palmy Q 4405

Property Identification Code (PIC) of this property: QAWB0619

Number	Description (BREED, SEX, E.G. HEREFORD CROSS STEERS)	Brands or Earmarks (IF PRESENT OR REQUIRED)
12	Brangus Bulls	
111	Angus Bulls	
123	Total	

Consigned to: GDK Roma Scheyards Roma Qld 4455

Destination (if different) of cattle: _____

NLIS devices used on these cattle: Number of ear tags 123 Number of rumen devices _____

Details of other statutory documents relating to this movement e.g. health statement

- Have any of the cattle in this consignment ever in their lives been treated with a hormonal growth promotant (HGP)? (Use a second document for mixed consignments.)
Yes No +
- Have the cattle in this consignment ever in their lives been fed feed containing animal fats?
Yes No (See Explanatory Notes)
- Has the owner stated above owned these cattle since their birth?
Yes No If No, how long ago were the cattle obtained or purchased?
(If purchased at different times, tick the box corresponding to the time of the most recent purchase.)
A. Less than 2 months B. 2-6 months C. 6-12 months D. more than 12 months
- In the past 60 days, have any of these cattle been fed by-product stockfeeds?
Yes No If Yes, attach a list of the by-product stockfeeds, date when last fed and a copy of an analyst's report if available.
- In the past 6 months have any of these animals been on a property listed on the ERP database or placed under any restrictions because of chemical residues?
Yes No If Yes, give details: _____

- Are any of the cattle in this consignment still within a Withholding Period (WHP) or Export Slaughter Interval (ESI) as set by APVMA or SAFEMEAT, following treatment with any veterinary drug or chemical?
Yes No If Yes, give details: (Record additional details in question 9)
Calteguard Plus On 16/7/20 20 WHP ESI (if SET)
- In the past 60 days, have any of the cattle in this consignment consumed any material that was still within a withholding period when harvested, collected or first grazed?
Yes No If Yes, give details:
CHEMICAL PRODUCT _____ DATE APPLIED _____ /20 _____ /20 _____ /20
GRAZING WHP DATE FIRST FED/GRAZED DATE FEEDING/GRAZING CEASED
- In the past 42 days, were any of these cattle:
a) grazed in a spray risk area; or
b) fed fodders cut from a spray drift risk area? (See Explanatory Notes for definition of spray drift risk area.)
Yes No If Yes Date sprayed: _____ DAY MONTH YEAR
- Additional information: see requirements in Explanatory Notes for completing this document.

Declaration
I JONATHAN SCHMIDT 203 Square Top Rd Palmy Q 4405 LPA

declare that, I am the owner or the person responsible for the husbandry of the cattle and that all the information in part A of this document is true and correct. I also declare that I have read and understood all the questions that I have answered, that I have read and understood the explanatory notes, and that, while under my control, the cattle were not fed restricted animal material (including meat and bone meal) in breach of State or Territory legislation.

Signature* J Schmidt Date* 24/8/20 20
*Only the person whose name appears above may sign this declaration, or make amendments which must be initialed.
Tel no. 0429 067 313 Fax no. 46 634 054

Part B To be completed by the person in charge of the cattle while they are being moved. Completion of this part is optional in SA and VIC.

Movement commenced: 24/8/20 20 7:00 (am/pm)
Vehicle registration number(s): 019 XXU
Humbrop

I Tono Schmidt am the person in charge of the cattle during the movement and declare all the information in Part B is true and correct.
Signature T Schmidt Date 24/8/20 20 Tel no. 46634002

FOR THE FARMER

FOR THE FUTURE

The team at Dalby Rural Supplies are your local experts in all things cattle including; fencing, steel, crushes, stock handling equipment, feed supplements, vaccines, animal health & husbandry products and much more!

From humble beginnings in a tin shed in 1994, Dalby Rural Supplies has remained locally owned and operated by business partners, John Cullen and Andrew Johnston.

At Dalby Rural Supplies, we are part of the fabric of the Western Downs community. We have your best interests at heart and our goal is to lift our customers to be cutting edge performers.

We can help you grow it, feed it, water it, wash it, move it and build it.
