## MERINO AND POLL MERINO STUD

### 18<sup>TH</sup> ANNUAL ON PROPERTY RAM SALE

The rams presented for your selection here today were shorn on the **15th of March 2020**. The fleece measurement data collected for generating the **ASBVs** was sampled one week prior to shearing, and the fleeces weighed at this shearing. The objective wool measurements presented today were taken on the **1<sup>st</sup> of August 2020**, while the bodyweights were current on the **17<sup>th</sup> of August 2020**.

Please note the difference between ASBVs and EBVs. The EBVs are distinguishable by the lack of known sire, a different logo in this catalogue, and 0% accuracy on the pen card. SGA cannot generate an accurate prediction of the sheep's reproductive merit without known parentage or progeny in the system. The EBVs have been presented as they are still an indication of the animal's performance relative to his peers within this flock, including those animals that do have ASBVs. We would encourage buyers not to compare ASBVs with EBVs directly.

Every year we face the conundrum of whether or not we will keep any rams to breed from ourselves. We pride ourselves on making our best genetics available to you as our clients, and consequently they are all available here for you today. With this in mind, we would like to retain the right to collect semen from any animal in the auction for use in our AI Program, at our cost and at your convenience as the purchaser. For any further clarification on this, please speak with Bert or Dion.

# Terminology of Wool Testing Data

- Micron:** The average fibre diameter of the tested sample expressed in Microns ( $\mu$ )
- SD:** Standard Deviation. Is the statistical distribution or probability in microns that presents approximately 70% of the fibres either side of the average fibre diameter measured within the sample.
- CV:** Coefficient of Variation of fibre diameter
- CF:** Comfort Factor. Is the % of the fibres equal to or less than 30 $\mu$ .

## Terminology of ASBVs

ASBVs describe the expected performance of the progeny of a sheep, not just the performance of the sheep itself. An ASBV therefore describes the breeding value of the sheep.

**Ycfw:** Y=Yearling (10-13 months)  
Cfw= Clean Fleece Weight  
This figure is expressed as a percentage.  
Eg. a Ycfw of 19 is 19% above average

**Ywt:** Y=Yearling  
WT= Body Weight (Kg)  
Eg. a YWT of 4.5 is 4.5kg above average

**Yfd:** Y=Yearling  
fd= Fibre Diameter  
for selection of animals able to produce a higher value fleece.

**The Dual Purpose (DP & DP+) indexes** rank animals on their ability to produce merinos for a dual purpose operation. These indexes are aimed at those producers whose majority of sheep income comes from sheep sales. It is for self-replacing merino flocks that do not keep their wethers and also join a portion of their ewes to terminal sires for lamb production.

**The Merino Production (MP & MP+) indexes** rank animals on their ability to produce progeny for a fine wool operation that has significant surplus sheep sales. The index is aimed at those producers whose sheep income is a balance of both wool and surplus sheep sales. It is for self-replacing merino flocks who do not keep their wethers to produce wool.
