Welcome

Welcome to the inaugural Caloona Charolais and Mala-Daki Simmentals Bull Sale. In July 2019 Mala-Daki relocated to Tamworth and the sale has evolved as a consequence of the joining of the two studs and new management of 'Turramurra' in Tamworth.

The drought caused both studs to reduce their herd size in 2019 as part of a progressive drought strategy. As many cattle producers across Australia know some of the worst drought conditions and now COVID-19, has created some difficult and very trying times.

This years bulls and females present an impressive line up which are sure to complement any herd.

All of the Mala-Daki Simmentals sale animals are poll and have been DNA tested and parent verified. DNA results confirm that 17 bulls and 4 females are

homozygous poll with 8 bulls being homozygous black. Caloona Charolais has 6 poll females who will be pregnancy tested prior to sale and are offering 10 poll bulls.

The sale will be contacted by AuctionsPlus as a fully online Helmsman Auction. Inspections are welcome at any time prior to the sale by appointment and the sale animals will be available for inspection on sale day from 10:00 am right through to the end of the sale.

Agents from Elders and Chris Paterson Stock and Station Agents will be onsite on sale day to assist with your animal selection and online bidding.

We look forward to welcoming you to inspect this wonderful offering of bulls and females and being part of our inaugural sale.

Location

ADDRESS

'Turramurra' 1137 Middlebrook Road
Loomberah, NSW 2340

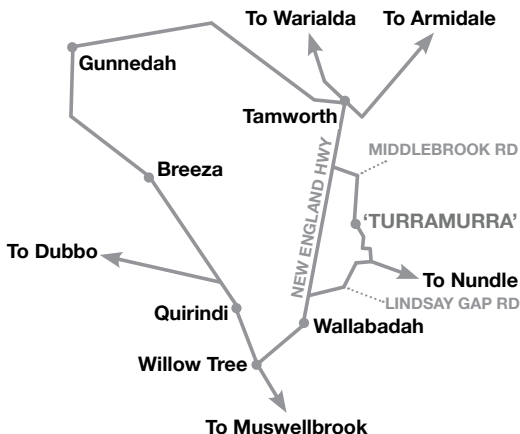

DIRECTIONS

From Tamworth (AELC roundabout)

Drive south 17km and turn left into Middlebrook Road. Drive 6.5km to the T-Intersection, turn right and drive 4.5km to 'Turramurra' on left.

From Muswellbrook BP

Drive north 7.5km turn right into Lindsay Gap Road. Drive 18.5km, turn left into Middlebrook Road, drive 13.5km to 'Turramurra' on right.

Sale Information

INSPECTIONS

Cattle inspections are welcome at any time prior to the sale by arrangement with the Vendor. Cattle will be yarded into pens by 10:00 am sale day.

SALE DAY CATERING

Will be available.

HEALTH

All bulls and females have been examined for health and structural soundness by Dr Rhys Duncan of Piper Street Veterinary Clinic with bulls being crush side semen tested, scrotal measurements taken and a Veterinary Bull Breeding Soundness Evaluation certificate issued. All sale animals have returned a negative result for Pestivirus testing. Sale bulls have been vaccinated with Ultravac 7 in 1, Pestigard (for BVDV), Vibrovax, Tick fever (3 Germ) and were drenched with Cydectin in May 2020. The sale females have been vaccinated with Ultravac 7 in 1, Pestigard (for BVDV) and drenched with Cydectin LA in May 2020. The herd has a Johnne's Beef Assurance Score (JBAS) of 6.

RAW DATA

All bulls will be scanned by Bovine Scanning Services prior to the sale for eye muscle area (EMA), rump and rib fat and IMF. Bulls will be weighed with supplementary information available at www.bullsale.com.au and on social media platforms prior to sale day.

6 MONTH GUARANTEE

All sale animals have been evaluated for structural soundness and fertility. To the best of our knowledge the bulls are in sound working order and females are reproductively sound at the time of the sale. Any claim against the breeding ability or a structural breakdown of any animal must be made in writing and accompanied by a Veterinary Certificate within six months of the sale date. Any animal failing to breed may be either replaced with an animal of similar value (if available) or credit made available to the value of the purchase price, minus salvage value, as a refund. The purchaser will be responsible for any costs incurred.

DELIVERY

Animals waiting delivery or pickup will be held free of charge for up to 14 days, unless prior arrangements are made. All care will be taken, but absolutely no responsibility will be accepted for any injury or loss occasioned during, as a consequence of, or in relation to any holding.

Free delivery will be offered up to 300km from Tamworth. We are more than happy to assist with all deliveries, please speak to us as we will go out of our way to help you get your purchases home safely and economically. We can deliver cattle to Tamworth RLX, which is a transport hub for most major carriers.

TRANSFER OF REGISTRATION

All registered sale animals are registered with Simmental Australia or Charolais Australia and are able to be transferred to your ownership on request and at your cost.

AUCTIONSPLUS

Our sale will be conducted as an online only helmsman sale through AuctionsPlus, commencing at 1:00pm.

There will be no physical auction, however agents will be onsite to assist with the online bidding process. Bidding is only available if registered with AuctionsPlus. You must register online at www.auctionsplus.com.au at least 24 hours prior to the sale. For first time users of AuctionsPlus we recommend you register as soon as possible and become familiar with the site. For more information contact AuctionsPlus (02) 9262 4222.

OUTSIDE AGENT REBATE

A 2% rebate will be offered to outside agents on the condition that a written introduction is received 48 hours prior to the sale and/or the agent accompanies the purchaser to the sale and settles on their behalf within 7 days (this clause will be strictly adhered to).

TERMS & CONDITIONS

Terms of the sale are as per Conditions of Sale for New South Wales Stud Stock.

The Sale will be conducted by Elders (Tamworth) and Chris Paterson Stock and Station Agent as an Online only Helmsman Auction via AuctionsPlus. Elders (Tamworth) will be the settling agent. All lots will be sold exclusive of GST.

INSURANCE

Ownership passes at the conclusion of the sale and it is recommended all cattle be insured.

COVID-19

Please follow directions and safety signs on sale day in regard to Covid 19. We will be working within current guidelines as set by the Australian Government. All guests will be required to sign in on arrival and adhere to current social distancing rules. Please be responsible and respectful of others and their health and safety and do not attend if you are not feeling well.

SALE DAY SAFETY

All sale bulls and females have been screened for temperament and are quiet to handle under normal circumstances. There are, however, risks associated with cattle handling. Visitors enter the cattle pens at their own risk and children must not enter pens.

POLL/HORN STATUS & COAT COLOUR TESTING

All Simmental sale animals have been DNA tested for parentage, poll status and coat colour.

DISCLAIMER

People entering upon this property for any purpose whatsoever including attendance at cattle auctions do so at their own risk. We are not liable to you for any personal injury or death suffered by you and for theft loss or damage to any property caused or contributed to by us or by any other person whether caused or contributed to by or by negligence deliberate act or unlawful conduct. "We" or "us" or "our" refer to the owners their employees contractors and agents and each of them. While every care has been taken in compiling this catalogue to ensure accuracy of information supplied no responsibility is accepted for any errors which may have occurred.

About Us

CALOONA CHAROLAIS

Caloona Charolais is owned by Louie and Steven Franco. The stud started as a small hobby about 30 years ago and progressed to over 200 breeders before refining it to around 100 elite breeders in recent times.

They have had success showing cattle at numerous local and Royal shows with most recent results being awarded Interbreed Bull and part of the Hordern Trophy winning pair at Sydney Royal Easter Show.

The main aim of Caloona is to produce cattle suitable for commercial producers, with softness and adequate muscle and fat cover.

About Us

MALA-DAKI SIMMENTALS

Mala-Daki Simmentals is a family owned operation established in the early 1990s by Jason and Jacqueline Impey, along with their twin daughters Jennifer and Jessica.

Breeders of red, black and traditional Simmentals and SimAngus with a commitment to producing moderately framed, structurally correct cattle with ideal temperament and carcase traits.

The carcase traits have been recognised most recently being part of the winning Stan Hill Trophy team, which included two Mala-Daki steers and winning Domestic Champion in the RAS Beef Challenge.

BreedPlan EBVs Explained

BREEDPLAN is a modern genetic evaluation system for beef cattle breeders and uses the world's most advanced genetic evaluation system (based on Best Linear Unbiased Prediction (BLUP) technology) to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (eg weight, carcass, fertility). Included in the calculation of EBVs are the performance of the animal and known relatives, the heritability of each trait and the relationship between the different traits with all traits combined in one analysis.

GROUP BREEDPLAN EBVs cannot be validly compared with EBVs from any other BREEDPLAN analysis therefore Simmental Breedplan EBVs cannot be compared to Charolais Breedplan EBVs.

EBVs

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value for performance traits it is possible to make good estimates called Estimated Breeding Values. In calculating EBVs, the performance of individual animals within a contemporary group is directly compared to the average of other animals in that group. A contemporary group consists of animals of the same sex and age class within a herd, run under the same management conditions and treated equally. Indirect comparisons are made between animals reared in different contemporary groups, through the use of pedigree links between the groups. EBVs are expressed in a unit of measurement for each particular trait. They are shown as positive + or negative - differences between an individual animal's genetics difference and the genetic base to which the animal is compared. For example, a bull with an EBV of +50 kg for 600 Day Weight is estimated to have genetic merit 50 kg above the breed base of 0 kg.

Whilst EBVs provide the best basis for the comparison of the genetic merit of animals reared in different environments and management conditions, they can only be used to compare animals analysed within the same analysis.

EBVs are published for a range of traits covering fertility, calving ease, milking

Calving Ease (%) are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs indicate easier calving.

CE % Dir = Direct Calving Ease - The EBV for direct calving ease indicates the influence of the sire on calving ease in purebred females calving at two years of age.

CE % Daughters = Daughters' Calving Ease - The EBV for daughters' calving ease indicates how easily that sire's daughters will calve at two years of age.

Gestation Length (days) is an estimate of the time from conception to the birth of the calf (based on Artificial Insemination and paddock mating). Lower (negative) Gestation Length EBVs indicate shorter gestation length and therefore easier calving and increased growth after birth.

Birth Weight (kg) is based on the measured birth weight of progeny, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth.

200 Day Growth (kg) is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400 Day Weight (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600 Day Weight (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight (kg) is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd.

Milk (kg) is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

Scrotal Size (cm) is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age and is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

Days to Calving (days) indicates the fertility of the daughters of the sire. It is the time interval between the day when the female is first exposed to a bull in a paddock mating to the day when she subsequently calves. A negative EBV for days to calving indicates a shorter interval from bull-in date to calving and therefore higher fertility.

Carcass Weight (kg) is based on abattoir carcass records and is an indicator of the genetic differences in carcass weight at the standard age of 650 days.

Eye Muscle Area EMA (sq cm) is calculated from measurements from live ultrasound scans and from abattoir carcass data, adjusted to a standard 300 kg carcass. This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 300 kg dressed carcass. More positive EBVs indicate better muscling on animals. Sires with relatively higher EMA are expected to produce better muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower EMA.

Rib Fat and Rump Fat (mm) are calculated from measurements of subcutaneous fat depth at the 12/13 rib site and the P8 rump site (from live ultrasound scans and abattoir carcasses) and are adjusted to a standard 300 kg carcass. These EBVs are indicators of the genetic differences in fat distribution on a standard 300 kg carcass. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

Retail Beef Yield RBV (%) indicates genetic differences between animals for retail yield percentage in a standard 300 kg carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

Intramuscular Fat IMF (%) is an estimate of the genetic difference in the percentage of intramuscular fat (marbling) at the 12/13th rib site in a 300 kg carcass. Larger, more positive values are generally more favourable.

BreedPlan EBVs Explained

Accuracy

Accuracy (%) is based on the amount of performance information available on the animal and its close relatives - particularly the number of progeny analysed. Accuracy is also based on the heritability of the trait and the genetic correlations with other recorded traits. Hence accuracy indicates the "confidence level" of the EBV. The higher the accuracy value the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives. Even though an EBV with a low accuracy may change in the future, it is still the best estimate of an animal's genetic merit for that trait. As more information becomes available, an EBV is just as likely to increase in value, as it is to decrease.

Accuracy values range from 0-99%. The following guide is given for interpreting accuracy:

Accuracy range	Interpretation
less than 50%	EBV should be considered as a preliminary estimate. It could change substantially as more performance information becomes available.
50-74%	Medium accuracy, usually based on the animal's own records and pedigree. Still subject to substantial changes with more information, particularly when the performance of progeny are analysed.
75-90%	Medium - high accuracy and includes some progeny information. Becoming a more reliable indicator of the animal's value as a parent
more than 90%	High accuracy estimate of the animal's true breeding value. It is unlikely that the EBV will change much with the addition of more progeny data.

Selection Indexes

Simmental selection indexes are calculated for four market specifications: Domestic Maternal, Export Maternal, Northern Terminal and Vealer Terminal.

Charolais selection indexes are calculated for three market specifications: Domestic Maternal, Export Maternal, Northern Terminal

Indexes are reported as an EBV in units of relative earning capacity (\$'s) for a given market. They reflect short-term profit generated by a sire through the sale of his progeny and the longer-term profit generated by his daughters in a self replacing cow herd.

Domestic Maternal Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g. Angus cows) targeting the domestic supermarket trade. Steers are either finished on grass or grain (e.g. 60-70 days). Steers are marketed at 430 kg live weight (240 kg HSCW and 6 mm P8 fat depth) at 14 months of age. Daughters are retained for breeding.

Export Maternal Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g. Angus cows) targeting the export trade. Steers are finished on grain (e.g. 120 days) and marketed at 700 kg live weight (380 kg HSCW and 8 mm P8 fat depth) at 28 months of age. Daughters are retained for breeding.

Northern Terminal Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Northern Australia (e.g. Brahman cows) targeting the export trade. Steers are finished on grass and marketed at 630 kg live weight (345kg HSCW and 12mm P8 fat depth) at 28 months of age. This is a terminal production system therefore no daughters are retained for breeding.

Vealer Terminal Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g. Angus cows) targeting the vealer trade. Vealers are weaned and sold at 8 months of age weighing 350 kg (195 kg HSCW and 6 mm P8 fat depth). This is a terminal production system therefore heifers are not retained for breeding purposes.
