

Calcookara Stud

- Calcookara Stud was originally established back in 1912. We are based in the Cowell hills on upper Eyre Peninsula. Our family has seen many changes in the merino industry since then. The focus at Calcookara is very concentrated on an easy care mules free animal that thrives under paddock conditions with minimal help. We are aiming to cut 4.5kg/wool per ewe every 6 months at 80mm of length whilst retaining our existing 18-19 micron base. We are already at the 4kg at 70mm mark of this goal. We have ALWAYS been very focused on the purity of our wool. In the last couple of years we have joined sheep genetics to help lift certain traits within our flock, but not by introducing animals of extremes, as we believe that gaining a little at a time will create a lot less waste over all. After all we want a well balanced, uniform flock with predictability. At Calcookara we would rather take positive steps steadily rather than compromise the quality that we already have.
- We offer free ram delivery in SA & classing of clients hoggets.
- We hope you enjoy our genetics as much as our clients & we do.
