GROUP BREEDPLAN SUMMARY OF AVERAGE EBV'S FOR 2019 DROP CALVES

Group Breedplan tables have been provided from each Breed Society's 2020 Group Breedplan Summaries (as published on their websites) as an aid to bull buyers.

The average EBV's for the 2019 calf drop is an indication of the current genetic level of the breed based on the latest calf crop with a potentially complete performance profile.

You CANNOT make between breed assumptions from these figures. You can only compare Group Breedplan EBV's within a breed. There has been no attempt to standardise the EBV's across breeds as yet.

Please also note the degree of accuracy ("Acc.") percentage attributed to each animals' individual figures when weighting each trait's influence on that animal.

For more information and an explanation of EBV's please visit the relevant breed websites.

Insurance tailored to my farm. That's why I'm with WFI.

At WFI, we take the time to thoroughly understand your business and how it operates. Because when we get to know a business, we can protect everything that matters.

We're available to meet with you face-to-face to discuss your insurance requirements. That's just one of the reasons why we're good people to know for insurance.
