# WELCOME TO THE 2021 ALBANY SALE

WELCOME TO OUR FIRST ALBANY FEBRUARY SALE, WHICH HAS MOVED FROM HOPETOUN TO ALBANY FOR 2021. WE WILL BE STILL HOLDING OUR ANNUAL ALBANY YEARLING SALE IN MAY 2021 UNDER THE SAME HELMSMAN ON-LINE FORMAT.

**The online Albany Sale will start at 1pm Wednesday 3rd February. This year we are excited to be selling 81 18-month old bulls on-farm at Bevan and Rebecca Ravenhill's Albany property, "Yoolberup", 605 Fishtrack Road, Manypeaks. Elders and Independent Rural Agents (IRA) are the selling agents.**

Thanks to COVID, 2020 has been the year of working online from the farm, of Zoom and Skype and Teams and Webex. For my family this was a year of change and adapting. Ruth, Charlotte, Ed and I settled into a routine at the farm in Yea of online working and learning and bunkering down with the cows for company throughout winter which then became spring as the COVID numbers in Victoria soared.

One of the benefits of Victoria's 9 month lockdown for me was the hands on farming time I had with the family. Our routine of shifting breaks, breeding cows, mustering on horseback and fine tuning our R&D GrowSafe feed efficiency centre was invaluable. Like many I will look back on this time fondly and be reminded of the true rewards of a farming lifestyle. I know life on the land isn't always perfect, but it sure beats spending hours in traffic and airports!

One thing us farmers are good at is adapting. I have found it difficult being unable to travel to WA all year, but appreciate all the support from so many good people who got us through. Special thanks to Bevan Ravenhill, Col Thexton and our Hopetoun staff, Brad Rees, Francisco Ghio and Florencia Boasso.

Included in this catalogue is some information regarding the new revamped ASA Indexes. There has been some major re-ranking of individuals and sires mainly due to increased pressure (downward) on mature cow weight. We welcome the increased focus on cow size, it's a logical step and an important trait for any breeder. We have always maintained a strong focus on getting calving ease, growth and moderate maturity patterns so the changes in indexes are more reflective that cow size has a big influence on cost of production and fertility. Please note 84% (68/81) of this year's Sale bulls are rock-solid calving ease bulls suitable for heifers!

## Highlights of 2021 Albany Sale Bulls

- Bulls average in the Top 8% of the breed for Domestic (DOM) and 4% for Heavy Grain (GRN) Indexes
- Top 30% of breed for 400D Growth and still breed average Mature Cow Weight (MCW)
- Rock-solid calving ease bulls with 68/81 (84%) of bulls are rock-solid calving ease bulls ✓ suitable for heifers
- Elite proven carcass genetics - bulls average in top 7% for marbling (IMF) and top Eye Muscle Area (EMA)

Bulls have been run at Many Peaks, near Albany and still running on grass and silage leading up to the Sale.

3 Generations of Ravenhills, Graham, Bevan and Colby.

## **IMPORTANT CHANGES TO BREEDPLAN IN DECEMBER 2020 WITH NEW VERSIONS OF ALL INDEXES RELEASED – EXTRACTS FROM ANDREW BYRNE, ASA 16TH DECEMBER 2020**

Angus Australia's Breed Development & Extension Manager, Mr Andrew Byrne explained that the selection indexes were last revised in December 2014 and so updating of the selection indexes is important in ensuring the selection indexes remain relevant to the genetic requirements of the current beef supply chain.

"Firstly, all the economic and production assumptions "that underpin the selection indexes have been updated to reflect current production systems and markets" said Mr Byrne.

"And secondly, the software that is used to calculate the selection indexes has been upgraded to a newer version that includes a number of considerable improvements by comparison to the previous version".

Four selection indexes are routinely published for Angus animals within the TransTasman Angus Cattle Evaluation, being the Angus Breeding Index, Domestic Index, Heavy Grain Index and Heavy Grass Index.

The selection indexes are economic indexes and balance the genetic merit of animals for individual traits to produce an overall "score" of an animal's combined genetic value. The selection indexes are "whole chain" indexes, taking into consideration the relative economic importance of different traits across the entire beef supply chain, from conception to slaughter.

"The updates that have been made to selection indexes will result in some re-ranking of Angus animals, along with a considerable increase in the spread of selection index values between animals", said Mr Byrne.

The selection indexes that are published for Angus animals are derived using a software program called BreedObject.

BreedObject has been developed over several decades by researchers at the Animal Genetics & Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, with funding support from Meat and Livestock Australia Limited (MLA).

The updates scheduled for mid-December utilise the latest version of BreedObject software, known as BreedObject version 6, which has also been adopted recently by other breed associations, including Herefords Australia and the Australian Wagyu Association.

By comparison to previous versions, BreedObject version 6 incorporates improved modelling of the feed costs associated with the maintenance of the female breeding herd throughout the year.

Other improvements include, among other things, improved modelling of young animal growth, enhanced modelling of carcase market specifications and values, and inclusion of net feed intake as a specific trait in the breeding objective that is modelled.

The most notable change resulting from the new software version is an increase in the emphasis that is placed on mature cow weight within the selection indexes, meaning animals with high Mature Cow Weight EBVs will not rank as highly on the selection indexes as to what they did previously.

"Using the Angus Breeding Index as an example, the emphasis placed on mature cow weight increases from 4% to 17%", Mr Byrne said.

"The updated selection indexes will still result in a positive response for traits like calving ease, female fertility and carcase value, but aim to have a more balanced approach between growth and mature weight".

"So while the indexes will still result in an increase in the growth of Angus animals, mainly to decrease the age at which Angus animals meet target specifications, the indexes should maintain mature weight constant, rather than resulting in the continual increase that has been observed in the weight of mature Angus females", explained Mr Byrne.

Further information on updates that have been made to the selection indexes that are published on Angus animals is available by clicking on the links below, or by contacting staff at Angus Australia.

## **COMMENT FROM LAWSONS ANGUS ON NEW INDEX RELEASES**

Previously the Indexes have not reflected the importance of cow size and selection on Index alone often provides wide variances across all traits and tends to blow mature cow size out.

We welcome the changes and appreciate it's never easy to get collective agreement on significant changes like these, however, even though these changes are advantageous for Lawsons Angus we feel there needs to be some further fine tuning to get them more reflective of commercial reality and better prioritise economic weightings (including feed efficiency).

As we always say, please continue to look at individual traits and set thresholds and goals around these traits (rather than use Indexes to set your goals) as these EBVs are very accurate, allow comparison between bulls, studs and allows breeders to compare between years and consider the genetic merits of their current bull team and where they should focus going forward.

This year marks a move away from Hopetoun to holding our 18-month sale in Albany. We hope our loyal Esperance clients will make the journey! The sale will be a helmsman online sale.

We hope Western Australia will open the border to us Victorians!

Bevan, Ken and Graham Ravenhill.

Colby Ravenhill hard at work!

Q770 is as good on the eye as his impressive numbers indicate, a truly outstanding individual, thick body set and muscle pattern, super quiet disposition and extremely sound footed. Q770 ranks in the top 5% of the breed for Heavy Grain Index (GRN), Domestic Index (DOM) and IMF, top 2% for EMA and top 10% for 400D Growth. These Momentous contemporaries are truly unique in their combination of key economic traits and represent 50 years of breeding.

Q797 ranks in the top 10% of the breed for Heavy Grain Index (GRN), top 5% for IMF and top 2% for EMA. Q797 is smack on breed average for Mature Cow Weight (MCW) and has the potential to lift and herd to a new level in terms of end-product value. The average across both WA Sales is top 6% of the breed for marbling (IMF) and top 7% for Eye Muscle area (EMA). No other Angus herd comes within a bulls roar of this let alone the other unique aspects of our balanced breeding program. However, the real proof is in the results of commercial clients and their relaxed modus operandum at calving time and high pregnancy rates and the performance of their calves and the demand by feedlots and meat processors.

Q841 ranks in the top 5% of the breed for Heavy Grain Index (GRN), EMA and marbling (IMF). These Sale bulls are like peas in a pod from a visual and genetic perspective, they provide commercial clients with large numbers of elite bulls to select from a diverse group of elite sires. We manage inbreeding at an individual level as every mating is carefully planned. There is no reason to chase outcross genetics from other studs and risk the predictable pathway that Lawsons Angus offers.

Smooth looking beast out of a two year old Incredible daughter. It is hard to fathom these boys were bred under the toughest conditions that any herd would face. Q769 is the #3 ranked for Domestic Index (DOM) in Albany Sale; one of the elite top 1% of the breed for ALL Indexes. Lowest Mature Cow Weight (MCW) in Albany Sale at +67 (breed average +99).

One of the elite top 1% of the breed for Heavy Grain Index (GRN), Angus Breeding Index and Heavy Grass Index, top 5% for Domestic Index (DOM) and IMF, top 10% for EMA. Note very moderate Mature Cow Weight (MCW), which is a big part of Relevance's and E7's strengths. Cost of production and fertility are often hard to pinpoint with any one EBV, but getting a handle on how MCW EBVs fit your optimum herd size is a big start.

Only three sons of the legendary Ayrvale Bartel E7 sell in the Albany Sale (Lots 42-44). Bartel E7 has 6,358 progeny registered in Australia and 2,190 are bred by Lawsons Angus! E7 has shot back up the rankings on latest release of Indexes due to his exceptionally well balanced growth curve. E7 is top 1% on ALL Indexes and still hard to beat for his unique balance of traits and superior carcass traits. Top 5% of the breed for Heavy Grain Index (GRN), top 10% for Domestic Index (DOM) and Carcase Weight (CW), IMF and 400D Growth.

		62	53	64	66	65	64	65	63			
		GRN	185	DOM	171	ABI	161	GRS	167			

Q763 ranks in the top 10% of the breed for Heavy Grain Index (GRN) and top 7% for EMA. Perfect growth curve and what a beast to look at, this Bartel E7 out of a two year old Intensity daughter has it all! It cracks me up when I hear seedstock breeders make comments like "it's rare to find a bull with good phenotype and numbers", it's mostly they are used to looking at animals run under low stocking pressure so don't understand commercial reality that cattle that work hard and have to compete for feed don't always look pretty and that's an important part of keeping a commercial handle on important traits like fertility.

Q806's attractive phenotype, elite end-product value and balanced production traits makes him one to take a close look at. He is one of the elite top 1% of the breed for Heavy Grain Index (GRN), top 5% for IMF, top 7% for EMA. Second lowest Mature Cow Weight (MCW) in Albany Sale at +70 (breed average +99). Prophet and Momentum are two of the all time high use bulls at Gardiner Angus Ranch. Prophet sold over 130,000 units of semen for a good reason, it was great seeing him in retirement at GAR in 2019.

# SALE CONDITIONS, REFERENCE SIRES + SIREMATE.

---

FOR ALBANY & JOANNA PLAINS SALES.

# SALE CONDITIONS

## BUYER REBATES FOR OUTSIDE AGENTS

All lots will be sold subject to the usual conditions governing auction sales.

Rebate of 2% is available to outside agents who attend the sale or introduce their client prior to Sale day, and settle on behalf of clients within 7 days. Please email introductions to lawsons@lawsonsgenus.com.au and/or the selling agent. If agents are nominated to settle on behalf of clients on Sale day and do not attend 1% rebate will be applied.

## DELIVERY OF SALE BULLS

Lawsons Angus will do our best to assist in the efficient and safe delivery of your bulls. Buyers, please ensure bulls are insured at the fall of the hammer as our insurance does not cover injury of bulls in transit. Please make sure you provide full delivery instructions in writing, including full contact details and maps prior to leaving the Sale. We are offering free Delivery of the Sale Bulls to regional centres in WA. In most cases we will deliver free to the farm address provided. We are also offering free delivery to Yea, Victoria for Eastern States buyers.

## REGISTRATION STATUS AND TRANSFER OF BULLS

Most bulls on offer are Registered Herd Book animals with the Angus Society of Australia (ASA). Registration status of bulls is shown in the catalogue. 'H' indicates the animal is registered in the ASA Herd Book, 'A' indicates bulls are registered with ASA Performance Register (APR). All bulls will be transferred to purchaser at no cost on request.

## 3 YEAR BULL GUARANTEE

All bulls have undergone rigorous and independent assessments for structural soundness and fertility, including a semen test and physical evaluation of the bulls reproductive tract. On top of this we offer the strongest guarantee of any seedstock herd in Australia.

All breeding cattle sold by Lawsons Angus are fertile and structurally sound to the best of our knowledge.

If a bull becomes infertile or breaks down due to reasons other than injury or misadventure, at any time in the next 36 months, we will:

1. provide you with a satisfactory replacement if available  
OR
2. issue you with a credit equal to purchase price minus salvage value, that may be used to purchase any animal in future Lawsons Angus sales.

The Lawsons Angus 3 year bull guarantee is not an insurance policy. Normal care needs to be taken as we cannot replace an animal that is injured or dies for any reason. We recommend you insure animals against injury.

An insurance service will be available on Sale day. This guarantee is in addition to normal terms and conditions governing auction sales, and as such the discretion and final decision as to issuing a credit will be with the vendor. Any credit will be limited to bull purchase price less salvage value and not include any costs, damages or loss of income incurred as a result of claims under this guarantee.

## ANIMAL HEALTH STATUS OF SALE BULLS

2020 WA Sale bulls have been semen tested by Jessica Shiller, Albany including a crush side and morphology test.

Bulls exposed to reproductive diseases such as Leptospirosis and Vibriosis can have their reproductive performance impaired and spread disease between the females they are servicing. All bulls offered in this Sale have been vaccinated with Ultravac 7 in 1, Vibrovax and Rhinoguard (IBR).

All bulls offered at this Sale have a J BAS 8 and all cattle are free to travel to all states.

## PESTIVIRUS, 7 IN 1 AND VIBRIO STATUS OF SALE BULLS

Lawsons Angus have been systematically working through a program with Enoch Bergman DVM, Swans Veterinary Services, Esperance, to eradicate Pestivirus from our herd in both WA and Victoria. This involved a combination of screening mobs for antibodies, ear notching testing and vaccinating the mobs that are shown to be negative that have had no previous exposure to a Persistently Infected (PI) animal with Bovine Viral Diarrhea (BVDV), also known as Bovine Pestivirus. BVDV is spread almost exclusively by PI animals and is a costly disease in the industry.

All WA males screened in 2017 were negative and therefore we have vaccinated all bulls and heifers.

## RETENTION OF SEMEN AND CLONING INTERESTS

This year we have selected several bulls as being of particular interest and merit. These bulls are referred to herein as "nominated bulls" and are identified in the catalogue by a shaded box containing the words "Retaining Semen Marketing Rights and 50% Revenue Sharing Interest". Animals in this sale that are nominated to retain a semen interest in are sold with the following conditions;

- Each animal sold is the physical property of the purchaser. The purchaser is entitled to collect semen for use in their own herd only at any time. The purchaser is entitled to 100% of the salvage value of the bull.
- Lawsons Angus retains the right to access the nominated bulls at a future date for the purpose of semen production with the semen to be used within the Lawsons Angus program. Semen will be collected at the expense of

Lawsons Angus and at a negotiated time and place convenient to the new owner and Lawsons Angus.

- Nominated bulls are sold with Lawsons Angus retaining exclusive semen marketing control, and a percentage of all semen royalties is nominated on the individual lot.
- Lawsons Angus may offer any purchaser, being a syndicate, semen company or other, the controlling interest in semen marketing of nominated bulls provided the prospective purchaser nominates their intentions to Lawsons Angus prior to sale, and at that time negotiate ongoing marketing/royalty terms acceptable to Lawsons Angus.
- If a bull is re-sold by a purchaser, Lawsons Angus retained interests persist with the new owner.
- Lawsons Angus retains exclusive cloning rights on all animals sold.
- No animal may be cloned without written consent from Lawsons Angus.

### **RETAINING SEMEN INTERESTS IN SALE BULLS ENABLES LAWSONS ANGUS TO OFFER ACCESS TO OUR BEST BULLS AND ENABLES THE BULL OWNER TO JOINTLY SHARE IN ANY FUTURE SUCCESS IN MARKETING SEMEN.**

### **RETAINING SEMEN**

Retaining a semen interest provides Lawsons Angus with the option to collect semen for our own use, but also to control the potential marketing of semen to the best effect through our network of contacts. Very few bulls ever sell a lot of semen, and in most cases it is later in life after progeny have proven the merit of the bull.

As we put a great deal of resources and intellect into developing each bull, and in some cases into sampling young bulls through AAA and cooperator programs, it is reasonable to participate in their future success in the form of semen sales and use in our own program so we can ensure we continue our program's genetic progress. With these points understood by our customers, we can offer for sale every bull we produce, and hold nothing back. It is important to note most seedstock herds retain their best bulls as stud sires, however the system we operate gives our clients direct access to our best bulls.

### **INSURANCE DISCLAIMER**

Insurance risk of stud animals sold at auction transfers to the purchaser at the fall of the hammer, including animals remaining on the vendor's property.

Purchasers therefore are advised to insure their animals at the completion of the sale. Stud Animals are not covered by commercial livestock insurance.

### **CALVING EASE**

We have included a red tick for bulls that are recommended for use over yearling heifers next to the Calving Ease heading in EBV section. Calving ease bull specifications are primarily set at  $\geq -1.0$  for Direct Calving Ease and  $\leq 4.5$  Birth Weight. Individual herds may successfully use bulls outside of this recommended range depending on their herd and production system but these are our recommended "safe" heifer specifications. We also recommend you talk to us about helping develop a pre-calving heifer management plan that can be used in conjunction with these EBV specifications to achieve optimal calving and rebreeding for two year old heifers.

**Below:** Quintarra bred cow and calf.

# REFERENCE SIRES

LAWSONS MOMENTOUS M518 BJS

Momentous is an exceptional son of Momentum, outstanding individual that excels in every part of the supply chain. Momentous has been widely used by Lawsons Angus and a popular sire at Genetics Australia. Super sound and exceptional temperament and out of one of our elite donor dams.

GAR METHOD HIL

New sire from Gardiner Angus Ranch, son of Momentum with massive growth and EMA. Progeny are wide-topped and attractive phenotype.

GAR MOMENTUM

Momentum is now regarded as one of the breeds elite calving ease, high carcase merit sires, progeny are stout, moderate frames with exceptionally high EMA and marbling. Sires moderate fertile, easy calving daughters that set the bar for cow efficiency and elite carcase genetics.

GAR PROPHET

Prophet sets the frontier in modern beef production with phenomenal growth curve, moderate cow size and easy calving. This combined with Prophet's elite carcase genetics and excellent disposition and structure provides the next step for progressive breeders.

GAR PROPHECY

GAR prophecy, is a Prophet son with high growth high end carcase merit, dam an elite B/R Ambush 28 daughter.

GAR RELEVANCE

A stout impressive Prophet x Progress son with low birth weight and high \$Value Indexes for the right reasons. Relevance is an outstanding calving ease bull, moderate maturity pattern and combines the genetics of the two highest proven marbling bulls in the breed.

**AYRVALE BARTEL E7**

Still the one to beat! Bartel is possibly one of the breed's greatest ever sires and was purchased by Lawsons Angus and syndicated as an 18 month old bull. Bartel E7 has been one of the most widely used sires in the Angus breed and was the highest MSA Index bull in his cohort in the Angus Sire Benchmark Program (ASBP). No other sires matches his unique growth curve, calving ease and his proven high end carcass merit.

**ALLOURA GET CRACKING G10**

G10 progeny are exceptionally stout, sound moderate frame size. Perfect for production of high quality beef and efficient cows. Get Cracking is one of the elite proven carcass sires and a graduate of the Angus Sire Benchmarking Program (ASBP). Unmatched combination of high IMF (+5.2) and massive EMA (+13.5 EMA), Get Cracking is one of the highest marbling bulls in the Angus breed. G10 had 21 steers in Cohort 4 that went through the ASBP long-fed program at Rangers Valley, his steers were ranked 2nd for MSA Marbling (average MSA marble score of 571) and 4th ranked for EMA at 85.8 sq cm EMA.

**PARINGA JUDD J5**

Judd was purchased by Lawsons Angus and Shaanxi Kingbull (China) as a yearling. Judd has proven himself in our tough contemporaries to match it with the big boys. Progeny are deep bodied, super attractive, slick coated and have exceptionally sound structure. Judd daughters are more moderate than both Berkley and Regent and are showing they can handle the pressure of our system with high stocking rates and large contemporary groups.

**GAR PHOENIX**

Phoenix is an impressive high growth Sure Fire x Prophet son. He has outstanding phenotype and easy calving. Phoenix is one of the highest indexing bulls in the breed.

**GAR ASHLAND**

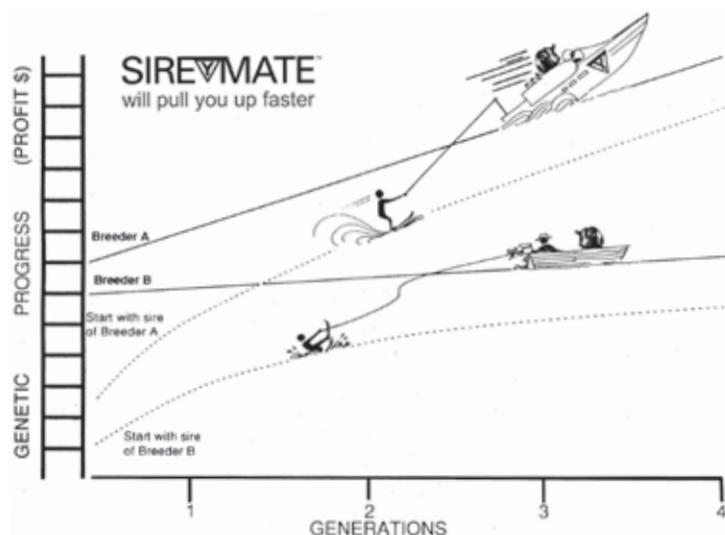

Ashland has been the high use sire at Gardiner Angus Ranch for several years now, he exhibits incredible calving ease, muscle and massive growth in a moderate maturity pattern. Ashland son GAR Home Town sold in 2020 for a record US\$475,000. Ashland offers plenty of mating flexibility from a pedigree stand point.

**ANGUS BREEDING PROGRAM IS BUILT ON MULTIPLYING THE BEST BULLS AVAILABLE IN THE WORLD. SIRE-MATE HELPS BREEDERS DEVELOP A SIMPLE, BUT STILL FLEXIBLE MATING PLAN THAT MINIMISES INBREEDING AND MAXIMISES GENETIC GAIN.**

## NOT ALL ANGUS BULLS ARE THE SAME AND THEIR GENETIC DIFFERENCES ARE WILDLY DIFFERENT.

We often struggle to explain the difference between a Lawsons Angus bull and other Angus bulls and breeding programs. It's not all just numbered based comparisons, natural selection still plays a big role in our breeding herd in terms of who stays and who goes.

Having 100% AI/ET, running animals under high stocking rates, short restricted breeding seasons and an annual structural assessment provides the "stress test" for all our breeding females and bulls. In terms of the underlying genetic direction of our herd, we think this is also our biggest point of difference. A great deal of time goes into the research and observing how animals perform under a wide range of environments to find the optimal genetic ranges for each of the main economic traits (calving ease, growth, mature size and carcass composition).

Searching the globe for potential sires is also crucial to genetics advancement on so many levels. Cumulative genetic progress still comes down to setting our (and our clients) genetic direction and implementing the plan year in year out. We don't rely

on computer generated matings, although we think these are great tools and provide us with what is theoretically possible in creating a new frontier. Our underlying management systems, data collection and most importantly our ability to utilise the information

in every individual mating are the big IP differences that are often not that well understood. Often those performance herds that have the best breeding programs and do not overfeed bulls are also the best value bulls to buy. The hardiness and toughness of our bulls and females in a range of environments gives us great confidence that our "stress test" and bull development program works where it counts.

### It's all in the curves...

In trying to explain the theory that all Angus bulls are not the same, we need to dig deeper than somewhat superficial averages. Averages gives us some idea on how these group of bulls compare with other Angus bulls, but the bell curve analysis is a lot more revealing on what is truly going on behind the scenes. Understanding the bell curves is fundamental for commercial herds trying to identify where they should be sourcing bulls from. The huge variance across even the best performance herds let alone the breed was a surprise even to us.

To go back a step, cattle have around 22,000 genes with most traits in animal genetics involving hundreds and in many instances thousands of genes. Population genetics involves normal distribution curves (or commonly referred to as bell curves because of the shape). What genetics is about is figuring out through performance recording, pedigree and DNA testing (genomics) where an animal sits in the bell curve

# ALL ANIMALS ARE EQUAL, BUT SOME ANIMALS ARE MORE EQUAL THAN OTHERS.

— George Orwell

for each trait we want to measure. Two thirds (68%) of the animals have a value for any trait within one standard deviation from the mean; 95 per cent within two standard deviations from the mean and 99.7 per cent within three standard deviations from the mean. Breeding or animal selection is really about manipulating bell curves and shifting animals into optimum or preferred ranges for each trait. This is often difficult for lowly heritable traits like fertility or antagonistic traits like birth weight and growth, where generally if you improve one the other gets worse, so identifying animals that defy these odds is a crucial part of animal breeding.

Firstly, we need to set breeding objectives and decide on our plan for which part of the bell curve we want to sit. For example, we may want to improve marbling but not at the expense of calving ease and fertility, so this may limit our ability or rate of progress on marbling. We only need to look at Wagyu cattle to see the impact of single-trait selection. In our herd we have developed clearly defined breeding goals and targets for each trait. Analysing our bell curves shows how unique these Sale bulls are and the tight range that these bulls fit into for each trait. This is key to giving clients a genetic pathway that provides a balanced approach to genetic improvement. This system is what provides genetic consistency and predictability from both a genetic and a financial aspect.

In practical terms we try and provide large numbers of animals that fall within optimal ranges for each trait. We don't necessarily have the extreme top end for each trait, but our bell curves are skewed towards the right end of the bell curves for each trait. For example, we don't have the highest growth bulls in the breed because if we did this would come with excessive mature cow weight (MCW) and calving issues, however, we still have bulls that are well above average for growth (Sale average is +93 for 400D vs +87 breed average).

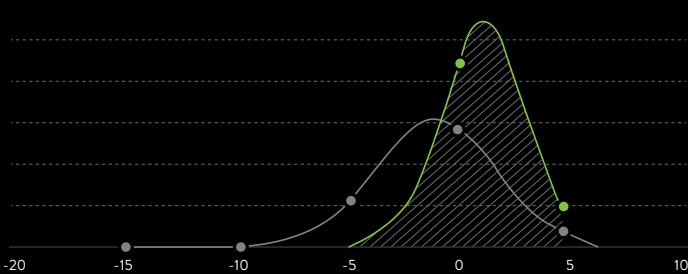

Again, it's not just the average that is important, if you look at the variation (spread of animals or tightness of the bell curve) you can see we have much sharper, tighter bell curves, so less of a range or variance in all key traits. This can only be achieved with generations of AI/ET and a PLANNED BREEDING PROGRAM.
