GLENORE 222/18 - Featuring Progeny by this Great Sire

Peter & Gillian Cain 'Glenore'
582 Eddington Road, Carisbrook, Vic.
Phone: (03) 5464 2264 Mobile: 0407 843 711

GLENORE POLL DORSET STUD

Here at Glenore, our breeding programs aim is to produce rams with the true Dorset type, excellent spring of rib, early maturity and high yielding carcasses for all marketing options- suckers, trade or export. Our flock rams are purely grass fed. This also provides you, the Primary Producer, the ability to finish your stock on pastures and know that you also will have the desired results.

Although we were only able to attend the Ballarat Sheep Show this year, which seen us receive two Firsts and a Second in this show with a strong competition in the line ups. We at Glenore believe we have a high quality of Stud Ram's for your selection. Glenore 222-18 which received Junior Champion Ram at the Bendigo ASBA in 2019 was retained in the stud due to his exceptional balance and true Dorset type. His outstanding progeny will be represented from many of his sons throughout the sale. We have also recently purchased a ram, Sunnybanks 37/20 "Chaos" for \$17,500 at the Australasian Dorset Ram Sale in August 2021. He is a correct ram with an outstanding hindquarter and true Dorset type and we look forward to seeing his progeny in 2022.

This year we will be holding our 11th annual On Property Sale. We are very pleased with the quality of Stud and Flock rams that we have on offer. With solid returns over the last 12 months, producers can feel confident in seeking the best quality on genetics available for maximum returns. This year's sale will interfaced with Auctions Plus and we will have all rams available for private inspection by appointment from the 1st October. This will give all clients the opportunity to view our rams prior to the sale.

Due to this ever changing world we are living in, we are putting all measures in place to keep everyone healthy and safe, our sale will be following all the COVID-19 guidelines. We ask that Social Distancing Measures be observed, masks are worn and everyone signs in. With this being said, we look forward to a safe and enjoyable sale for everyone.

This year's line up will not disappoint!

Best Regards
Pete, Gill & family

GLENORE STUD SIRES

GLENORE 222-18

Junior Champion Ram Bendigo ASBA 2019.
Retained for is exceptional balance and true Dorset type.

HILLDEN 863-16

Extremely correct and well balanced ram with true Dorset type.

WHAT IS THE MEAT INDEX?

The meat index formula is based on the eye muscle width (A), eye muscle depth (B) and fat (C) measurements. A higher predominance is given to eye muscle width (A) because it is more heritable while eye muscle depth (B) is influenced by environment factors. Fat (C) is penalised slightly. The resulting number is then adjusted for the age of the sheep, so the index is what the sheep's index would have been at eight months of age.

SCANNING MEASUREMENTS

Scanning for performance traits in animals has become a significant on-farm measuring tool for many years.

Australian Stockscan Services P/L scanners assess sheep at around 8–12 months of age for:

- Live Weight (LW)
- Eye Muscle Width (A)
- Eye Muscle Depth (B)
- Fat Depth (C)
- Eye Muscle Area (EMA) is calculated using the eye muscle width (A) and depth (B) measurements (A x B).
- Eye Muscle Area (EMA) to Live Weight (LW) ratio calculated.

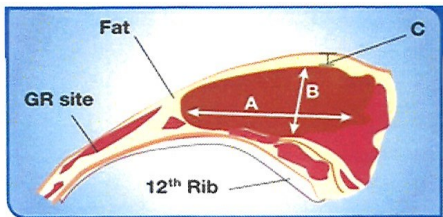

Figure 1: Exposed 12th rib on the carcass cut through the last thoracic and first lumbar vertebrae.

WHY THE MEAT INDEX?

The meat index allows a group of young sheep with different live weights, eye muscle dimensions and fat depth to be analytically compared.

Referring to the diagram at right, research has shown that:

- Eye muscle width (A) is more to do with the type of animal, i.e. shape and leanness.
- Eye muscle depth (B) is associated with the environment; feeding etc., which could change the ranking, if the animals were under stress at the time of scanning.

Fat Depth (measurement C) affects the index only slightly.

MUSCLE TO WEIGHT RATIO

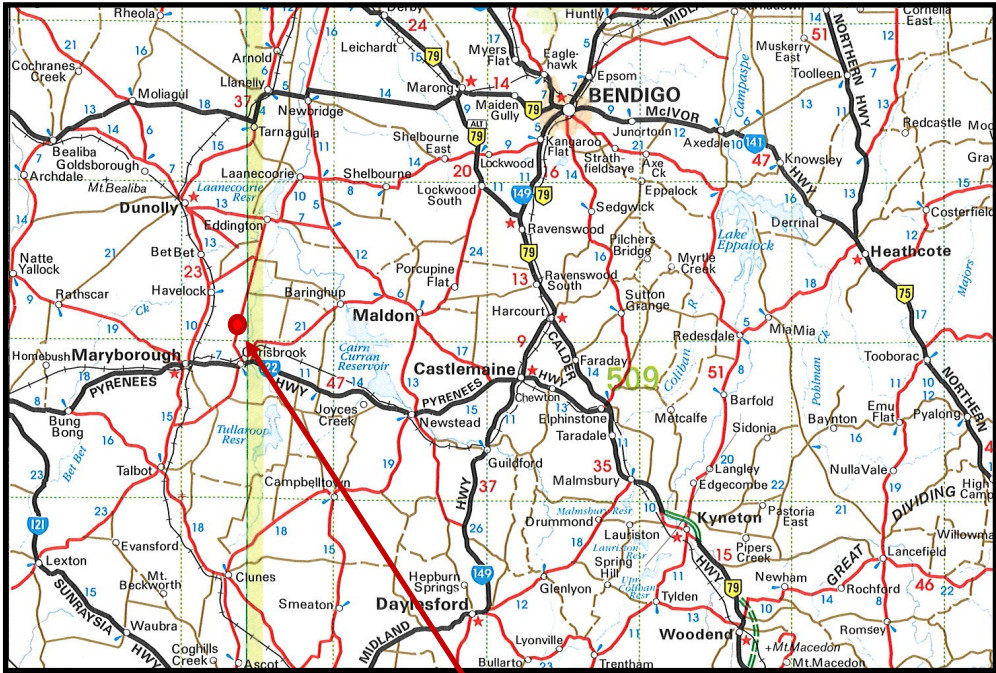

The muscle to weight ratio figure (EMA/LW) is calculated to help the breeders identify sheep with more meat, thus higher yielding carcasses. With the introduction of VISCAN these higher yielding carcasses will be more profitable.

LOIN MEASUREMENT

Stockscan in New Zealand has been working with Agresearch and together have perfected a technique to provide a loin measurement. We feel this has tremendous benefit to breeders and their clients.

Loin measurement will identify lambs which have good body length and are well muscled. Shoulder issues and mobility are a problem related to shorter sheep; these types are not able to progress into a class of heavier carcass weights. Identifying longer bodied sheep with optimal muscling could have benefits for the sheep industry.

If requested, loin measurement will be available to Australian clients and the processed results included with your normal analysis data report.
