

WAKELEIGH WHITE SUFFOLKS 2021 RAM SALE

WELCOME

Gary, Marlene and Kylie Wake would like to extend a warm welcome to our valued clients.

The well known Wakefield Park stud owned by Gary and Marlene Wake, has been consistently selling top quality rams for over 27 years. They joined forces with Kylie with the transfer of ewes from the Somerset Stud after the dissolving of the Somerset partnership in 2019. Rebranding was required, and the WAKELEIGH name was created. We are now looking forward to providing the Western District of Victoria and beyond with top quality, value for money genetics that are suitable for a variety of commercial and stud enterprises.

Stock health is of the utmost importance. The property has OJD MN1V Status (VS1804), Brucellosis Accreditation (3346), guaranteed footrot and lice free, full vaccination history and regular drenching, this will give prospective buyers even more confidence when purchasing our stock.

Each year we use rams with the best genetics available for commercially important traits. We have a strong focus on breed type, conformation and soundness. Our rams are raised in a paddock environment under commercial conditions. The top 80 rams are used as ram lambs over our commercial ewe lambs for a March/April joining, then have to recover in paddock conditions to be presented for sale in October.

Any questions regarding this or any other information in the catalogue can be directed to Gary – 0418 501 901, Kylie – 0428 508 995, or Heath at SGL on 0408 368 370. You can also follow us on Facebook – Wakeleigh White Suffolks.

WAKELEIGH WHITE SUFFOLKS 2021 RAM SALE

LAMBPLAN AUSTRALIAN SHEEP BREEDING VALUES (ASBV's)

All of the breeding values displayed on our sale rams are ASBV's meaning they meet the quality and accuracy standards that LAMBPLAN set.

Our genetic advantage can be seen in the table below where the 2021 sale team are 13.44 index points better than the National Terminal Average.

A brief explanation of each trait follows:

Birth Weight (BWT) ASBV is based on measured birth weight of lambs adjusted for age of dam. The lower the ASBV the lighter is the estimated progeny birth weight potential.

Weight (WWT, PWT) ASBVs describe the animals' genetic merit for growth rate. A positive ASBV means the animal is genetically faster growing. Weight ASBV's are available for weaning (100 days), post weaning (200 days) and yearling, hogget and adult ages.

Fat Depth (PFAT) ASBVs describe the value of an animal's genes for fat depth at a constant weight – a negative ASBV means a genetically leaner animal.

Eye Muscle Depth (PEMD) ASBVs describe the value of an animal's genes for eye muscle depth at a constant weight – a positive ASBV means a genetically thicker muscled animal, and one that will have more of it's lean tissue in the higher priced cuts of meat.

Lean Meat Yield (LMY) gives an indication of the proportion of meat compared to fat and bone in the carcass. (Higher is better)

Shear Force (SF5) is an indication of tenderness – the amount of force required to cut through a piece of meat. The more negative breeding value the better – less force = more tender meat.

Terminal Carcass Production (TCP) index has been created to assist producers to achieve gains in their major production traits, such as post weaning weight and muscling, as well as ensuring consumer satisfaction from lamb is maintained through focussing on key eating quality traits such as shear force (tenderness) and intramuscular fat (marbling).

Lamb Eating Quality (LEQ) index balances large improvements in eating quality with modest increases in lean meat yield and includes emphasis on worm egg count ASBVs.
