# SALE INFORMATION

**INSPECTION:** All cattle will be available for inspection at the Kingslane Red Angus selling complex from 10.30am on the morning of the sale. Sale lots may be inspected at any time in the lead up to the sale day by arrangement with the vendors.

**REGISTRATION:** All registered cattle are sold as herd book registered and are eligible for transfer at vendor's expense. Please advise transfer details on your registration of buyer's number.

**REFRESHMENTS:** Complimentary luncheon and after sale refreshments provided.

**BUYING ORDERS & PHONE LINKUP:** A person nominated by you to act on your behalf will diligently execute buying orders. Bidding by mobile phone will be available. Contact Elders for details.

**INSURANCE:** Insurance is recommended and will be available on sale day through attending Elders representatives.

**ZOETIS STAR Breeder Program:** All lots treated with the Zoetis STAR Breeder Program are indicated by the Star logo.

**GUARANTEE:** All bulls are to be sold as fertile and capable of natural service. The purchaser is to have the right to a full refund of the purchase price of the bull (excluding and costs and expenses of the purchase) within 6 months of the date of sale subject to submitting a veterinarian's report stating that the bull is infertile or incapable of natural service. The veterinarian must also state that in his/her opinion the bull has not suffered any injury or illness since being sold to the purchaser, which could have affected his breeding ability. This must be forwarded to the vendor within 14 days of the date being 6 months after the sale date.

All bulls breeding soundness examined and semen tested. All bulls have been carcass scanned and carry comprehensive EBV's. All bulls guaranteed for temperament, structural soundness and fertility. All bulls ear notched, tested negative for BVDV.

**DELIVERY:** Sale lots will be available for delivery immediately after the sale – no sale lots will be loaded during the sale.

**GST:** All lots are sold exclusive of GST.

**BUYER REGISTRATION:** Buyers are requested to register with the selling agent prior to commencement of the sale and to display their registration number at the fall of the hammer.

**Sire:** RED SIX MILE AVIATOR 217P (OSF)

**Vendor Comments:** This Profit Builder progeny has a beautiful depth of body and with an excellent EMA, he is a meat machine. Genetically, his Sire is considered one of the best Red Angus Bulls in the entire breed. This bull is sure to quench any cattleman's thirst for a performance bull with high quality body design and structure. Halter broken, semen tested and Zoetis Star Breeder Program certified.

# BREEDPLAN

## EXPLANATORY NOTES FOR CATALOGUES

Red Angus GROUP BREEDPLAN EBVs cannot be validly compared to the GROUP BREEDPLAN EBVs for other breeds (including Angus).

Only GROUP BREEDPLAN EBVs or Interim EBVs with accuracy (Acc) from the same analysis (eg. Rd Angus) can be validly compared.

**Estimated Breeding Values (EBVs):** An Estimated Breeding value EBV is an estimate of the genetic value of that particular animal for each trait measured.

**Accuracy:** An accuracy is presented with every EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives. Accuracy below 75% should be considered low.

**BW:** Birth Weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

**Milk:** 200-Day Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV is indicative of their daughter's milking ability as it affects the 200-400 day weight of their calf.

**200:** 200-Day Growth EBV (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

**400:** 400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

**600:** 600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

**MAT:** Mature Cow Weight EBV (kg) is an estimate of the genetic difference in cow weight at 5 years of age. Moderate EBVs are generally more favourable.

## Carcase

**EMA:** Eye Muscle Area EBV (cm<sup>2</sup>) estimates genetic difference in eye muscle area at the 12/13th rib site of a 300kg dressed carcass. More positive EBVs indicate larger eye muscle area and therefore higher retail beef yields.

**RIB:** Rib Fat EBV (mm) estimates the genetic differences in fat depth at the 12/13th rib in a 300kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

**IMF%:** Intra-muscular Fat Percent EBV (%) is an estimate of the genetic difference in the percentage of intra-muscular fat at the 12/13th rib site in a 300kg carcass. For some markets, larger more positive values are more favourable.

## Selecting Animals Using Red Angus Selection Indexes

The Selection Index value for an animal is effectively an EBV of the animal's profitability in a defined commercial production system and market. Ranking seedstock animals on their Selection Index value sorts them based on their progeny's expected profitability for the targeted production system.

## Red Angus Selection Index Descriptions

- **Supermarket (SUP)** – Estimates the genetic difference between animals in net profitability per cow joined for an example commercial herd targeting the domestic supermarket trade. Steers are either finished on grass or grain (eg. 70 days). Steers are marketed at 450 kg live weight (250 kg HSCW and 12mm P8 fat depth) at 15 months of age. Daughters are retained for breeding. In response to industry feedback regarding eating quality and tenderness, a small premium has been placed on marbling.
- **Vealer (VLR)** – estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd targeting vealer production. Vealers are finished on grass and are marketed at 320 kg live weight (180 kg HSCW and 4mm P\* fat depth) at 9 months of age. Daughters are retained for breeding. No marbling is required.
- **Northern Steer (NTH)** – estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Northern Australia with *Bos indicus* cows targeting grass finished steers for export. Steers are marketed at 600kg live weight (330 kg HSCW and 10mm P8 fat depth) at 27 months of age. Daughters are retained for breeding. In response to industry feedback regarding eating quality and tenderness, a small premium has been placed on marbling.

# WA Red Angus Bull Sale

Bulls from the following studs at the sale on the 15<sup>th</sup> February 2021 will be STAR accredited.

**Magic Valley Beef • Kingslane**

STAR is a quality assurance program for the stud breeder that ensures steps have been taken to prevent their animals from being carriers or from transmitting preventable reproductive diseases, including *leptospirosis*, *pestivirus* and *vibriosis*.

For a commercial breeding herd, the reproductive integrity is imperative to its continued productivity. For the bull buyer, selecting a STAR accredited bull ensures that you can be confident the animal purchased will not introduce one of the preventable reproductive diseases into your herd.

To qualify to be STAR accredited, the animals are firstly tested to confirm that they are not a lifelong carrier and shedder of pestivirus, (a PI animal). Once determined to be PI free, animals are then vaccinated twice against the reproductive diseases *leptospirosis*, *pestivirus* and *vibriosis*.

Purchasers can therefore be confident that the animals they buy are not going to introduce these preventable reproductive diseases into their own herds.

It is highly recommended that all commercial producers continue to vaccinate their own herds against these diseases to prevent against the dramatic impact that reproductive disease can have on the productivity of a herd.
