RAMS FOR ONE BREEDING SEASON
TO BE FREE OF STRUCTURAL DEFECT
OR GENETIC ISSUES.**

This is extra peace of mind when bidding online

The guarantee does not cover external or environmental factors. A replacement ram of similar quality shall be provided if issue is found.

INTRODUCTION

Gemini White Suffolk stud was established in 1993 by introducing White Suffolk rams to put over ewes from our previously registered Suffolk stud. We have always maintained a strong focus on commercial attributes relevant to industry demands and client profitability.

Selection for higher growth and carcase yield through increased muscling improves productivity, while selection for easy care shape and sound structure results in lower costs and more live lambs on the ground.

We use a combination of visual classing and high performance selection through Lambplan to produce some of the highest quality and performing prime lamb genetics available in today's meat sheep industry.

Semen: Stud ram purchasers please note that Gemini maintains semen rights in all stud rams sold. This is for our possible within flock use only. Any semen that has not already been collected will be collected at our expense and the purchaser's convenience. Please contact us if you need further clarification.

Registration: In relation to rams purchased for stud breeding and registration, to protect our genetic integrity we will only be transferring and registering rams at our discretion, subject to price and quality. Please consult prior to making any such purchasing decisions.

Ram lambs: it is our recommendation that on removing ram lambs from ewes you supplementary feed them for the following six to eight weeks for a quick recovery and to insure the longevity of your rams.

In 2011 we commenced DNA testing for Hypotrichosis (Hr), a simple recessive gene disorder which has been present in the sheep industry in very low numbers since the early 1900s. This is only of limited concern in a situation where stock from a known carrier animal are retained for breeding as the gene may then be passed on, but both parents must be carriers before you have any chance of expression, and then only 1 in 4. That said though, we are determined to eliminate it from our flock. With a recently discovered DNA marker, producers are now able to identify the status of rams. All sheep in this catalogue are DNA tested free, or both the sire and dam have been DNA tested free for Hypotrichosis.

SUPERWHITES

Gemini White Suffolk stud is a member of the Superwhites genetic improvement group of breeders who are focused on producing White Suffolk rams that contain the best genetics for prime lamb production. The group has been in operation across Australia since 1995 and collectively the produces around 3,000 rams annually.

Superwhites uses LAMBPLAN as a tool to aid in comparison of sheep across flocks as well as identifying the best genetics in Australia for use within the group.

The group foster excellent data quality with most members achieving Gold status, the highest data quality standard within Lambplan.

By using link sires and progeny testing a young sire team each year, Superwhites flocks have strong across flock links, meaning that the LAMBPLAN evaluation within Superwhite flocks is more accurate.

Superwhites members are improving their genetics faster than the average of all terminal sire breeds for all commercially important traits.
