ANNUAL BULL SALE

Tuesday 9th February 2021 - 3:00 pm

Offering 65 Angus Bulls

Sale will be interfaced with  AuctionsPlus™

Bull Sale Videos: www.littlemeadowsangus.com.au

J-BAS 8

Sale Address: 119 Poad Road, Crooked Brook, WA 6236

We will be offering a freight subsidy of \$300 per bull for Eastern State purchases.

Our 2021 sale team is available for inspections on-farm at any time prior to the sale along with a selection of private sale bulls.

Please phone Tony and Karen Golding: 0429 932 447

GENERAL INFORMATION

AGE OF SALE BULLS: 17-22 MONTHS OF AGE

After a change in our calving pattern to a winter calving for commercial reasons, the bulls we will offer for sale each year will be 17-22 months of age at our sale date.

SELLING SYSTEM:

Sale of bulls will be conducted as a ring sale auction. Video's of select bulls will be available on LM website. All bulls will be penned for inspection prior to the sale.

FERNWOOD ANGUS:

Little Meadows would like to welcome to our sale, 'Fernwood Angus', owned by John and Dale Jansen, Ginging. Bulls are bred by the Jansen's and purchased by LM upon weaning. The bulls are LM genetics and are fully guaranteed by LM. We look forward to a long and prosperous relationship with Fernwood Angus into the future.

FERTILITY AND PHYSICAL EXAMINATION

All bulls have been examined for breeding and structural soundness. They have been semen tested and guaranteed for fertility.

WEIGHT AND MEASUREMENTS

Scrotal circumference measurements that appear in the catalogue were collected on December 11th, 2020. All bulls will be weighed prior to sale and these weights will be available on sale date. Max Bowman scanned all bulls for carcass evaluation on December 11th, 2020.

GUARANTEE

All Little Meadows and Fernwood bulls are guaranteed for up to three years from the date of sale. **We advise all clients to have insurance on their bull purchases for the first 12 months of service.** Every effort has been made to ensure our bulls leave Little Meadows in top working order. However, should any Little Meadows and Fernwood bulls prove to be infertile or incapable of service we undertake to:

-Issue a refund equal to the purchase price less the salvage value and is calculated on the basis that the amount

is reduced by one third for each year of service from the date of sale.

The guarantee covers the purchase value of the bull, without interest, cost and damages. The guarantee shall apply providing the bull's incapacity is not caused by injury or disease contracted since leaving Little Meadows. A veterinary certificate must be supplied by the purchaser upon request.

HEALTH

All bulls offered for sale have been tested PI negative and vaccinated with Pestiguard, Vibrovax & 7-in-1 and are guaranteed free of Brucellosis, TB, Mannosidosis and Johnes Disease. WA has been declared Johnes free and bulls can go to all states. Little Meadows is J-BAS 8.

RECESSIVE GENETIC CONDITIONS

All bulls are tested or are by inheritance, free of all genetic conditions. There are four main genetic conditions within the Angus breed. They are AM (Arthrogriposis Multiple (Curly Calf); CA (Contractual Arachnodactyly (Fawn Calf Syndrome); NH (Neuropathic Hydrocephalus) and DD (Developmental Duplications). For the condition to be expressed, the undesirable gene needs to be present on both sides of the pedigree; both the sire and dam must be carriers.

SALE CONDITIONS

The conditions of the sale are those displayed on sale day by the selling agents.

Agent

Delaney Livestock Services

A 3% rebate is offered to outside agents who nominate their client(s) by email to littlemeadows6@bigpond.com 24 hours prior to sale. Agents must attend the sale with or on behalf of their client(s) in order to claim rebate.

DELIVERY OF BULLS

No bulls to be picked up or delivered on sale day.

We recommend that all bulls be insured that are remaining at Little Meadows. Bulls that remain at Little Meadows do

**DISCLAIMER

All information in this catalogue is believed to be true and correct. No responsibility taken for errors or omissions.

THE LM ADVANTAGE

OUR FEMALE HERD

We carefully choose our genetics and each individual female is mated to a specifically selected sire which best suits its phenotype and EBV figures.

The primary focus of our program is the maternal function of our females. Mating decisions are always made with a vision of the female progeny uppermost in mind, rather than specifically setting out to breed bulls.

We believe in breeding roomy, wedge shaped females that have plenty of pelvic room to calve easily that also give our clients heavier calves at weaning.

CARCASE PROFITABILITY

We strive to continue to breed bulls with elite carcass weights, EMA and IMF figures and have tailored our breeding program to produce genetics that will produce higher quality beef to suit our higher valued markets, both domestic and export. The soft skin, smooth muscle pattern on our cattle has been noticed by many and we feel is a good indicator of fine meat quality.

The Little Meadows 2021 Sale Bulls are on average 21.63% above breed averages for EMA, 3.8% above breed average for Carcass Weight, 9.28% above breed average for 200 day weight, 5.16% above breed average for 400 day weight, 3.8% and above breed average for 600 day weight.

ACCURATE DATA

LM Angus has an extensive system to record all data so that it is accurate as possible. 100% of the LM herd is herd book registered (HBR) and on BREEDPLAN.

DEDICATED FAMILY

As a family we work together to make LM a leader in Angus genetics and ensure our customers are happy with their investment.

CUSTOMER SERVICE

We are committed to help our clients achieve their goals and back our animals. We have worked with clients to match their environment and production system to get the most profit gains using our leading genetics.

SIRE GUARANTEES

All LM and Fernwood bulls are guaranteed for up to three years from the date of sale. We believe a sale of any animal is the beginning of a relationship with a client, rather than a deal.

GENETIC CONDITIONS

There are four main genetic conditions within the Angus breed and all LM sale bulls are tested or are by inheritance free of them.

RING SIDE

As a family we have been showing cattle since 1982 and have done so to showcase the quality of our female family lines to the industry.

UNDERSTANDING THE TRANSTASMAN ANGUS CATTLE EVALUATION (TACE)

What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with an IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals in Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes. For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

Birth	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	CEDtrs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
Growth	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
Fertility	DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
Carcass	CWT	kg	Genetic differences between animals in hot standard carcass weight at 750 days of age.	Higher EBVs indicate heavier carcass weight.
	EMA	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
	RBV	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.
Other	NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
Structure	Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate more desirable foot angle.
	Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate more desirable claw structure.
Selection Index	ABI	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems.	Higher selection index values indicate greater profitability.
	DOM	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade.	Higher selection index values indicate greater profitability.
	HGRN	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 250 day feedlot finishing period for the grain fed high quality, highly marbled markets.	Higher selection index values indicate greater profitability.
	HGRS	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers.	Higher selection index values indicate greater profitability.

RECESSIVE GENETIC CONDITIONS

This is information for bull buyers about the recessive genetic conditions, Arthrogryposis Multiplex (AM), Hydrocephalus (NH), Contractural Arachnodactyly (CA) and Developmental Duplications (DD).

Putting undesirable Genetic Recessive Conditions in perspective

All animals, including humans, carry single copies (alleles) of undesirable or “broken” genes. In single copy form, these undesirable alleles usually cause no harm to the individual.

But when animals carry 2 copies of certain undesirable or “broken” alleles it often results in bad consequences. Advances in genomics have facilitated the development of accurate diagnostic tests to enable the identification and management of numerous undesirable or “broken” genes.

Angus Australia is proactive in providing its members and their clients with relevant tools and information to assist them in the management of known undesirable genes and our members are leading the industry in their use of this technology.

What are AM, NH, CA and DD?

AM, NH, CA and DD are all recessive conditions caused by “broken” alleles within the DNA of individual animals. When a calf inherits 2 copies of the AM or NH alleles their development is so adversely affected that they will be still-born.

In other cases, such as CA and DD, calves carrying 2 copies of the broken allele may reach full-term. In such cases the animal may either appear relatively normal, or show physical symptoms that affect their health and/or performance.

How are the conditions inherited?

Research in the U.S. and Australia indicates that AM, NH, CA and DD are simply inherited recessive conditions. This means that a single gene (or pair of alleles) controls the condition.

For this mode of inheritance two copies of the undesirable allele need to be present before the condition is seen; in which case you may get an abnormal calf. A more common example of a trait with a simple recessive pattern of inheritance is black and red coat colour.

Animals with only one copy of the undesirable allele (and one copy of the normal form of the allele) appear normal and are known as “carriers”.

What happens when carriers are mated to other animals?

Carriers, will on average, pass the undesirable allele to a random half (50 %) of their progeny.

When a carrier bull and carrier cow is mated, there is a 25% chance that the resultant calf will inherit two normal alleles, a 50% chance that the mating will result in a carrier (i.e. with just 1 copy of the undesirable allele, and a 25% chance that the calf will inherit two copies of the undesirable gene.

If animals tested free of the undesirable gene are mated to carrier animals the condition will not be expressed at all. All calves will appear normal, but approximately half (50%) could be expected to be carriers.

How is the genetic status of animals reported?

DNA-based diagnostic tests have been developed which can be used to determine whether an individual animal is either a carrier or free of the alleles resulting in AM, NH, CA or DD.

Angus Australia uses advanced software to calculate the probability of (untested) animals to being carriers of AM, NH, CA or DD. The software uses the test results of any relatives in the calculations and the probabilities may change as new results for additional animals become available.

The genetic status of animals is being reported using five categories:

AMF	Tested AM free
AMFU	Based on Pedigree AM free - Animal has not been tested
AM_%	_% probability the animal is an AM carrier
AMC	Tested AM-Carrier
AMA	AM-Affected

For NH, CA and DD, simply replace AM in the above table with NH, CA or DD.

Registration certificates and the Angus Australia web-database display these codes. This information is displayed on the animal details page and can be accessed by conducting an “Database Search” from the Angus Australia website or looking up individual animals listed in a sale catalogue.

Implications for Commercial Producers

Your decision on the importance of the genetic condition status of replacement bulls should depend on the genetics of your cow herd (which bulls you previously used) and whether some female progeny will be retained or sold as breeders.

Most Angus breeders are proactive and transparent in managing known genetic conditions, endeavouring to provide the best information available. The greatest risk to the commercial sector from undesirable genetic recessive conditions comes from unregistered bulls with unknown genetic background. The genetic condition testing that Angus Australia seedstock producers are investing in provides buyers of registered Angus bulls with unmatched quality assurance.

For further information contact Angus Australia's Breed Development & Extension Manager on (02) 6773 4618.

THE BENEFITS OF BUYING YOUNG BULLS

The purchase and use of bulls 18 months or younger offers stock man lower bull costs but more importantly higher production and less injury throughout their working life.

Majority of seedstock producers in Western Australia sell two year old bull at auction however over recent years its been proven by producers in the East that this 'two year old system' is full of inefficiencies. Bulls originally evolved to start working at 12 to 14 months of age when they are lighter and more agile, yet most Angus bulls in Australia aren't put out to work until they are two years of age. Often they are fed throughout this period and at auction have reached heavy, mature weights and are normally over conditioned.

Unfortunately this results in inefficiencies that only come out of the bull buyer's pocket. Higher auction prices for over conditioned two year olds Increased injury due to their heavy, mature weight and sexual inexperience Higher maintenance costs

The average working life of a bull is less than three years and to us this is not a very satisfactory performance for one of the main operational costs of a beef enterprise. Hence our move in using younger yearling bulls many years ago. Since then we have achieved some great results and knew by offering younger bulls to our clients it would not only boost their herds profitability but they would also reap the added benefits:

- A longer working life (25% increase or more)
- Significantly reduces costs per calf
- More calves on the ground
- Faster rates of genetic improvement
- Significantly less injuries due to superior fitness and lower levels of body fat.
- Easier management.

From clients and our own experience young bulls settle in better, mix with other cattle more easily and are easier to handle than older bulls. We believe this is because they are working at a much younger age

and have not built-up the sexual frustration that encourages them to fight.

We would agree from experience that younger bulls can look unpleasant after their first joining season and due to them being in their working cloths at a young age they probably wont reach their genetic potential for mature weight until they are three or four year olds. Nonetheless the relationship between the age of a bull at joining has proven to have no effect on the weight of his calves and should be seen as a benefit as it contributes to their higher levels of fitness and agility throughout their life.

"If the beef industry is to make progress we MUST purge our minds of the belief that a bull has to be fat and well grown to be any good. THE VALUE OF A BULL SHOULD BE MEASURED BY HIS OFFSPRING, NOT ON WHAT HE LOOKS LIKE!" Said cattleman Sandy Yates.

British bred yearling bulls will be sexually mature if they are prepared well. It is critical that our young sale bulls are rigorously culled if they are not well grown and aren't structurally sound. To ensure this we apply a strict weaning, nutrition practice to deliver bulls that are.

- Well grown (14 months of age or older and averaging 550kg plus)
- In sound condition (fat score of high 2 or low 3)
- Sexually mature with a scrotal size greater than 35cm at 14 months of age
- Docile and manageable

Mating management is extremely important when using young bulls in your operation and some guidelines should be meet.

Join them with up to 35 females in the first year and normal levels thereafter DON'T join them with older bulls. Join either by themselves or with other young bulls of the same age and weight A six to eight week joining period is recommended Check their body condition score, like any bull if he gets too lean (BCS <2, you risk him not performing)

★ STAR BREEDER PROGRAM

BUY WITH CONFIDENCE

The **STAR BREEDER** program aims to maximise the reproductive integrity and health of stud and commercial stock.

A STAR BREEDER certified animal has been:

- ✓ Tested to show that they are not Bovine Viral Diarrhoea Virus (BVDV) Persistently Infected (PI) animals
- ✓ Vaccinated against Pestivirus (BVDV) to ensure they are protected from the effects of this infection
- ✓ Vaccinated against Leptospirosis, a reproductive disease and potential WH&S risk for cattle handlers
- ✓ Vaccinated against Vibriosis, a sexually transmitted cattle disease

You can be confident that every step has been taken to ensure these animals will not introduce preventable reproductive diseases into your herd. For more information talk to your Zoetis Cattle Representative, call **1800 963 847** or visit starprogram.com.au

We encourage all members to look for and support the Star Breeder Program.

DISCLAIMER AND PRIVACY INFORMATION

Attention Buyer

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

Parent Verification Suffixes

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA.

SV : the sire has been verified by DNA.

DV : the dam has been verified by DNA.

: DNA verification has not been conducted.

E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

Privacy Information

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

BUYERS OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO ANGUS AUSTRALIA

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its database and disclosing that information to its members on its website.

I, the buyer of animals with the following ids.....

.....(name) do not consent to Angus Australia using my name, address and phone number for the purposes of effecting a change of registration of the animals I have mentioned above that I have purchased, maintaining its database and disclosing that information to its members on its website.

Name: Signature:

Date:

Please forward this completed consent form to Angus Australia, 86 Glen Innes Road, Armidale NSW 2350.

If you have any questions or queries regarding any of the above, please contact Angus Australia on (02) 6773 4600 or email office@angusaustralia.com.au

VERBAL INSTRUCTIONS WILL NOT BE ACCEPTED

We are thrilled to welcome this stylish youngster into our herd after successfully purchasing Quantum Leap for \$42,000 at Texas Angus annual bull sale, NSW, in July 2020.

We have been very fortunate to secure WA semen rights to Texas Powershift P632, who is a full ET brother to lot 6 Texas Powerplay P613 who sold for \$108,000 at the Texas Angus annual bull sale, NSW, in July 2020.

A selection of Owen's rising two-year-old replacement heifers which out of LM bred females and mated back to LM sires. These young females were very impressive to see, with plenty of femininity, growth, depth of body and structural correctness to them.

Murdeduke K304 was purchased for \$28,000 at the Murdeduke Matrons Sale VIC in a syndicate with Crawford Angus NSW, Merridale Angus VIC.

“ To breed good bulls you must have GREAT females”

Is a phrase we often refer to here at LM Angus. As third Generation farmers, with a background in the Holstein industry, we understand the significance of females and their continuing genetic influence in a herd. They are the foundation to our breeding program and as we continue to increase our herd numbers we are strongly focused on our family lines, their genetic performance, high fertility , milking ability and structural soundness.
