SECTION 6

SECTION 1 IMPORTANT INFORMATION

This report generated by Plant Assessor™ © Online Safety Systems on Wednesday 10 Feb 2021 8:37 PM

This Risk Management Report has been prepared for -

(insert recipient name/company name)

This document has been prepared to cover the sale or transfer of this item of plant between the Company identified on the front cover and their named recipient. This report must not be used for any subsequent sale or transfer.

This document is provided to meet duty of care obligations as set out in relevant state and territory health and safety regulations for the supply of plant and the sale and transfer of plant.

The safety hazards associated with the operating and maintaining of this item of plant have been identified as far as practical by visual inspection. This item of plant is being sold in an "as-is" condition with known and unknown safety hazards. No physical testing has been conducted (eg. Wire rope tests, stress tests, structural/non-destructive tests, noise tests, vibration tests, brake tests, insulation tests etc.) unless stated otherwise in the notes.

This document is not intended to provide information on, nor warrant the mechanical, electrical or structural condition of this item of plant. Any information on standard features have been supplied through the manufacturer and should be used as a guide only until otherwise verified.

This item of plant should be further assessed, tested and inspected or dismantled as necessary to gauge any further hazards and /or risks relating to SPECIFIC WORKPLACE USE, which are currently unknown, in accordance with relevant standards, regulations and acts.

Under common law and relevant state and territory health and safety acts, regulations and codes of practice, there is a requirement for the plant owner, employer and operator to exercise a duty of care in the safe operation and maintenance of plant. Accordingly before this item of plant is supplied to, or used at any workplace it must be inspected to ensure it is in a fully operational, safe and serviceable condition and that operators and maintenance personnel are appropriately trained in the use & maintenance of this item of plant.

For further information regarding this report contact Online Safety Systems on 1300 72 88 52

RIS	SK ANALYSIS					
			CONS	SEQUENCE————		-
LIKELIHOOD		1. INSIGNIFICANT Dealt with by in house first aid	2. MINOR Treated by medical professionals, hospital out patients	3. MODERATE Significant non permanent injury overnight hospital stay	4. MAJOR Extensive permanent injury eg. Loss of fingers, extended hospital stay	5. CATASTROPHIC Death, permanent disabling injury eg. Loss of hand, quadriplegia
- LIKELI	A. Almost certain to occur in most circumstances	MEDIUM 8	HIGH 16	HIGH 18	CRITICAL 23	CRITICAL 25
•	B. Likely to occur frequently	MEDIUM 7	MEDIUM 10	HIGH 17	HIGH 20	CRITICAL 24
	C. Possibly and likely to occur at sometime	LOW 3	MEDIUM 9	MEDIUM 12	HIGH 19	HIGH 22
	D. Unlikely to occur but could happen	LOW 2	LOW 5	MEDIUM 11	MEDIUM 14	HIGH 21
	E. May occur but only in rare circumstances	LOW 1	LOW 4	LOW 6	MEDIUM 13	MEDIUM 15

LUATION	CRITICAL	Act immediately to mitigate risk. Implement risk treatment(s) in accordance with the risk treatment table below.
RISK EVA	HIGH	Act immediately to mitigate risk. Implement risk treatment(s) in accordance with the risk treatment table below. If the appropriate risk treatments are not immediately accessible establish interim risk treatment strategies. Permanent risk treatments must be implemented within one week.
	MEDIUM	Take reasonable steps to mitigate and monitor the risk. Implement risk treatment(s) in accordance with the risk treatment table below. Permanent risk treatments must be implemented with one month.
	LOW	Take reasonable steps to mitigate and monitor the risk. Implement risk treatment(s) in accordance with the risk treatment table below. Permanent risk treatments must be implemented with three months.

EATMENT		selecting the most appropriate risk treatment option involves balancing the costs and efforts of implementation against the benefits derived, with regard to legal, regulatory and other requirements. (SOUTCE AS/NZS ISO 31000:2009)				
REAT	Eliminate	Eliminate the risk source.				
5	Provide an alternative that is capable of performing the same task which is safer.					
	Engineering	Provide or construct a physical barrier or guard.				
	Administration	Develop policies, procedures, practices and guidelines in consultation with employees to mitigate the risk. Provide training, instruction and supervision about the risk source.				
ľ	Personal protective	Provide personal protective equipment to protect the individual from the risk source.				

SECTION 4 RISK TREATMENTS REQUIRED

This section of the report pertains to hazards created by use of this item of plant which currently do not have risk treatments in place. The risk treatments recommended in this section have been developed based on relevant Australian Standards, health & safety legislation, the hierarchy of risk treatment in accordance with the guidelines set forth in AS/NZS ISO 31000 - Risk Management and various other sources. The recommended risk treatment measures must be developed, implemented and validated as effective prior to the operation, maintenance or testing of this item of plant. Treatments applied must be dated and initialled adjacent the recommendations. All operators must read and understand the entire contents of this section prior to operating this item of plant.

HAZARD(S)	Prelim. Risk Rating	Residual Risk Rating	Time Frame	Due Date	Date Rectified	Initial
DELIVERY						
CRUSHING	HIGH 22	MEDIUM 15	1 Week	17-Feb-21		

Risk Treatment Required: SWMS Loading/Unloading

Source or develop guidelines for loading and unloading this machine to and from a flat top truck or trailer, low loader or tilt tray.

Once developed, ensure that all operators follow approved SWMS/SOP when loading and unloading this machine to and from a flat top truck or trailer, low loader or tilt

References: Occupational Health & Safety Act & Regulations, Work Health & Safety Act & Regulations-

Risk Treatment Required: **SWMS Load Restraint**

Source or develop transport restraining guidelines for this machine.

Once developed, ensure that all operators follow the approved SWMS/SOP when restraining this machine for transport.

FIT ELECTROCUTION	HIGH 22	MEDIUM 15	1 Week	17-Feb-21		
-------------------	---------	-----------	--------	-----------	--	--

Risk Treatment Required: Electrical Approach Distances

Attach a clear hazard warning label re: overhead electrical hazards and minimum approach distances adjacent operator work areas and any access to the top of the item of plant. These distances must be adhered to strictly. Once fitted these labels and tables must be present, clear and legible at all times.

Spotters are required when working within 5 metres of the minimum approach distance of any live electrical apparatus.

Any encroach within the minimum approach distances must only occur if the following provisions have been met -

- 1. The machine is designed to work within the minimum approach distances
- 2. Permission has been granted by the electricity company

3. Safe systems of work have been documented and approved

COLLISION	HIGH 22	MEDIUM 15	1 Week	17-Feb-21		
-----------	---------	-----------	--------	-----------	--	--

Risk Treatment Required: Phone Use label

This item of plant must be fitted with an instruction label advising that mobile phones must not be used whilst operating this machine. Accordingly all operators must not use a mobile phone at any time whilst operating machine. If phone use is necessary then operator must place machine in park configuration in a safe position prior to phone use. Operators MUST adhere to this advice at all times.

Once fitted this label must be clear and legible at all times whilst this item of plant is in operation.

References: AS1319-, ISO31000

OPERATION

Risk Treatment Required: Ag Loader SWL

This item of plant must haves a rated capacity label fitted to each side of the loader boom. Once fitted ensure that these labels are clear and legible at all times whilst this item of plant is in operation. Operators must not exceed this rated capacity at any time during operation.

References: NSW-2010

CRUSHING	HIGH 21	MEDIUM 15	1 Week	17-Feb-21		
----------	---------	-----------	--------	-----------	--	--

Risk Treatment Required: Loader Crush Zone Label

Ensure that a loader boom has a hazard warning label re: crush zone, keep clear attached. Once installed it must be present and fully functional and serviceable at all times.

Legislation: State Health & Safety Legislation & Regulation

References: AS/NZS2153, AS1319-

Risk Treatment Required: 3PL Crush Zone Label

Ensure that the rear of this item of plant has a hazard warning label adjacent the 3PL (three point linkage) area re: crushing, keep clear. Once installed it must be present and fully functional and serviceable at all times.

Legislation: State Health & Safety Legislation & Regulation

MEDIUM 14

MEDIUM 13

Risk Treatment In Place: External 3PL Controls

This item of plant is fitted with external 3PL controls. Whenever using this control extra caution must be exercised.

Keep all persons, body parts, clothing, tools etc away from the 3PL components or an connnected/disconnected implement at all times while operating these controls.

Stop, look and listen for any movement before approaching the 3PL components or an connnected/disconnected.

When using these controls to disconnect implements ensure that the implement is placed on level ground or approved sturdy stable stands.

BURNS, STRIKING

HIGH 22

MEDIUM 15

Risk Treatment In Place: Hydraulic Hoses

This item of plant has hydraulic hoses. These hoses must be inspected each day or before each use for wear and tear. If there are visible signs of wear immediate action must be taken to control the risk arising from this wear. These inspections must be documented.

Hydraulic fluid at high pressure can penetrate the skin, never use any part of your body to check for leaks. If oil penetrates the skin seek medical advice immediately. Always use a piece of cardboard or similar to check for suspected leaks.

Hydraulic pressure can be stored and is a hazard. Before disconnection or connection of hydraulic hoses complete the following steps -

- 1. Stop engine
- 2. Keep all bystanders clear of the work area
- 3. Refer to operators manual as to methods to release pressure
- 4. Wait 5 minutes
