**MERRIDALE**  
**A N G U S**  
**2021 SALE**  
FRIDAY 5<sup>TH</sup> MARCH 2021

1pm ON PROPERTY "MERRIDALE" TENNYSON - PETER COLLINS 0428 882 209

(1KM SOUTH OF TENNYSON POST OFFICE)

# Welcome

We would like to welcome all new and existing clients to our Merridale Sale for 2021.

Welcome to our sale, we thank you for your attendance and wish you every success.

This year has provided many challenges however we had a fantastic year with sufficient rainfall at suitable times, an abundant feed situation and great cattle prices.

With the everchanging world we are living in it has been pleasing to see the success at Weaner sales and Replacement sales of Merridale genetics. Congratulations to those breeders that have had amazing results with Merridale bloodlines.

Family is important at Merridale. We are privileged to have the founder of our family Phil Collins in the stands today on his birthday and grateful that we have Brodie, the next generation of cattle breeder offering his skills to our Merridale family business. As with our family, we have introduced some changes to our animal families.

The line up of animals this year, is a result of changes within our breeding program. We have introduced new AI sires and family lines. We see this as a positive development by including proven and successful donor cows from other programs which have then complimented our already existing line of fabulous females.

Five of our young bulls offered today have been successfully used in our breeding program indicating our confidence in the genetics we are offering in this catalogue. If you would like a pre-sale inspection of our sale team or if you would like advice with your animal selections please do not hesitate to contact Peter or Brodie with your enquiries.

Peter and Brodie.

# BUYERS INSTRUCTIONS

## Sale information

Cattle will be yarded in small paddocks by 10.30am sale day for inspection, or inspection can be arranged anytime prior to the sale.

## Location

Merridale Angus Stud is located 1km South of Tennyson PO.

## Guarantee

In the event of a bull proving to be infertile for natural service in the first 6 months from sale date, the vendor will offer to supply a suitable replacement (if available), or credit the purchase price (less any salvage value of the bull) to be used at Merridale. This is provided the problem is not caused by injury or disease since sale day. Any claim must be accompanied by a relevant Veterinary certificate.

## Insurance

We recommend that you insure your new investment. Please confer with your agents at the Sale.

## Cattle Health

All bulls are sold with vendors guarantee of fertility. Semen tested by Nationwide Artificial Services. The condition is for (9 months) and on receipt of a Veterinary certificate regarding infertility.

EMA and IMF assessment is completed by Liam Cardile Stock Services.  
Merridale Angus is a J-BAS 6 Herd.

## Safety

All Sale bulls have been screened for safety and are quiet to handle under normal circumstances. However, sale day places added pressure on them, so use caution and be aware of fighting bulls. Visitors enter cattle pens at their own risk. Children must not enter the yards.

## Instructions

Verbal instructions will not be accepted. Please complete the buyers instruction sheet and return to the agents.

## Transport

No transport will take place to Sale Day unless organised prior with Peter or Brodie. Remember on arrival to your property, you should have a few steers or cows in the yards to help your new bull settle in.

*FREE TRANSPORT TO MAJOR CENTRES WITHIN VICTORIA.*

## Outside agents

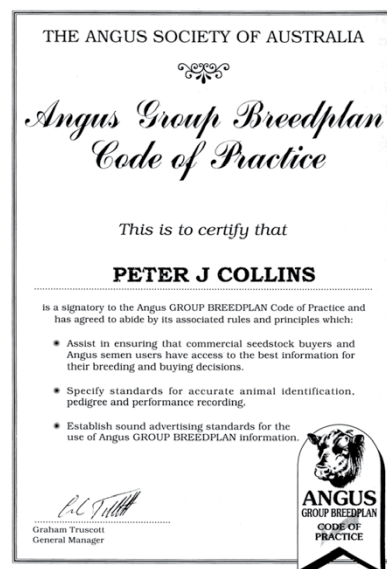

Rebate: Outside Agents accompanying a purchaser to the Sale are entitled to a 4% rebate. To qualify, the agent must register with Merridale in writing or by email not later than 5pm March 4th and must settle accounts within 7 days of invoice.

## Sale day

Any announcements will take precedence over printed material in this catalogue.

## Semen

Semen sold with heifers, is to be delivered at own expense.

Notes: An exciting sire prospect. He has been used over 40 Stud cows in the spring only just being released of his duties on the 10/1/21. Out of a New Addition Female bought in Partnership with Crawford Angus, it's easy to see by the length, depth of body and structural soundness what makes him the quality bull that he is. Top 1% for 200,400,600 day weights.

Notes: The smokey of this draft! If you want a bull for being just a good bull then this is him. One of the very last Gus sons to be offered. Gus weighed in at 1290kgs in the sale yards last year as an 8 year old and this son is well on the way to that mark in years to come. For anyone looking to add length, frame and power to your program. One of our picks here at Merridale.

LOT 42

# BRINGING YOUR NEW BULL HOME

WHEN PURCHASING A BULL, CARE AND HANDLING AFTER THE SALE CAN BE AS IMPORTANT AS THE PURCHASE ITSELF. LOOKING AFTER YOUR BULL WELL DURING THE INITIAL STAGES OF HIS WORKING LIFE MAY ENSURE LONGEVITY AND SUCCESS WITHIN YOUR BREEDING HERD.

## PURCHASE

Temperament is an important characteristic when selecting a bull. Selecting a bull that may be flighty or aggressive will make life difficult for you each time he is handled. Note which bulls continually push to the centre of a mob, run around, or are unreasonably nervous, aggressive or excited.

At the sale, note any changes of temperament by individual bulls. Some bulls that are quiet in the yard or paddock may not like the pressure and noise of the auction and become excited. Others that were excited beforehand get much worse in the sale ring and can really perform. Use the yard or paddock behaviour as a guide, rather than the temperament shown in the ring.

## DELIVERY

When transporting your new bull insurance against loss in transit, accidental loss of use, or infertility, is sometimes provided by vendors. Where it is not, it is worth considering. After purchase tips:

- When purchasing, ask which health treatments he has received.
- Treat and handle him quietly at all times - no dogs, no buzzers. Talk to him and give him time and room to make up his mind.
- With more than one bull from different origins, you must be able to separate them on the truck.
- Make sure that the truck floor is covered to prevent bulls from slipping. Sand, sawdust or a floor grid will prevent bulls from being damaged by going down in transit.
- If you can arrange it, put a few quiet cows or steers on the truck with the bull. Let them down into a yard with the bulls for a while before loading and after unloading.
- Unload and reload during the trip as little as possible. If necessary, rest with water and feed. Treat bulls kindly your impatience or nervousness is easily transmitted to an animal unfamiliar to you and unsure of his environment.

## IF YOU USE A PROFESSIONAL CARRIER:

- Make sure the carrier knows which bulls can be mixed together.

- Discuss with the carrier, resting procedures for long trips, expected delivery time, truck condition and quiet handling.
- Give ear tag and brand numbers to the carrier and make sure you have the carrier's phone number.
- If buying bulls from interstate, organise any necessary health tests before leaving and work out if any other requirements must be met before cattle can come into another State.

When buying bulls from far away, you may often have to fit in with other delivery arrangements to reduce cost. You should make it clear how you want your bulls handled.

## ARRIVAL

When the bull or bulls arrive home, unload them at the yards into a group of house cows, steers or herd cows. Never jump them from the back of a truck directly into a paddock—it may be the last time you see them. Bulls from different origins should be put into separate yards with other cattle for company.

Provide hay and water, then leave them alone until the next morning.

The next day, bulls should receive routine health treatments. If they have not been treated before, all bulls should be vaccinated with:

- 5-in-1 vaccine;
- vibriosis vaccine;
- leptospirosis vaccine (if in areas like the Hunter where leptospirosis exists);
- three-day sickness vaccine (if in areas where this sickness can cause problems).

Give particular attention to preventing new bulls bringing vibriosis into a herd. Vibriosis, a sexually transmitted disease, causes infertility and abortions and is most commonly introduced to a clean herd by an infected bull. These bulls show no signs of the illness. Vaccinated bulls are free from vibriosis, so vaccinating bulls against the disease should be a routine practice.

Vaccination involves two injections, 4–6 weeks apart, at the time of introduction, and then a booster shot every year. Complete the vaccinations 4 weeks before joining.

MATING NEW YOUNG BULLS

MANAGING OLDER HERD BULL

DURING MATING

NORTHERN AUSTRALIA

# BRINGING YOUR NEW BULL HOME

Consult with your veterinarian and draw up a policy for treating bulls on arrival and then annually. Bulls should be drenched to prevent introducing worms and, if necessary, should be treated for lice.

Plan to give follow-up vaccinations 4–6 weeks later. Leave the bulls in the yards for the next day or two on feed and water to allow them to settle down with other stock for company. A bull's behaviour will decide how quickly he can be moved out to paddocks.

## MATING NEW YOUNG BULLS

Newly purchased young bulls should not be placed with older herd bulls for multiple-sire joining. The older, dominant bull will not allow the young bulls to work, and will knock them around while keeping them away from the cows.

Use new bulls in either single-sire groups or with young bulls their own age. If a number of young bulls are to be used together, run them together for a few weeks before joining starts. They sort out their pecking order quickly and have few problems later.

When the young bulls are working, inspect them regularly and closely.

## MATING NEW YOUNG BULLS

Older working bulls also need special care and attention before mating starts. They should be tested or checked every year for physical soundness, testicle tone, and serving capacity or ability.

All bulls to be used must be free-moving, active and in good condition. Working bulls may need supplementary feeding before the joining season to bring up condition.

## DURING MATING

- Check bulls at least twice each week for the first 2 months. Get up close to them and watch each bull walk; check for swellings around the sheath and for lameness.
- Have a spare bull or bulls available to replace any that break down. Replace any suspect bull immediately.
- Rotate bulls in single-sire groups to make sure that any bull infertility is covered. Single-sire joining works well but it has risks. The bulls must be checked regularly and carefully, or the bulls should be rotated every one or two cycles.

Bulls are a large investment for breeding herds and they have a major effect on herd fertility. A little time and attention to make sure they are fit, free from disease and actively working is well worthwhile.

## NORTHERN AUSTRALIA

Although the Angus breed originated in a cooler climate, they can adapt to subtropical regions with many straight-bred and cross bred producers finding success in Northern Australia. Some of the following information may also be helpful for new bulls located in more temperate climates.

## ADAPTATION

The key to Northern success for Angus is that cattle introduced from the Southern regions of Australia be allowed to adapt to their new environment before commencing their working life. If possible, a break of 3 months is advisable before you set your bull to work.

## PURCHASE IN COOLER MONTHS

Ensure your bulls are in good condition before they do commence their working life. The cooler months are an ideal time to purchase and introduce Angus cattle, allowing them plenty of time to acclimatise.

## CHANGE OF FEED SOURCE

When inducting Angus cattle into your herd consider their source of feed. Have you taken an animal which has been supplemented on grain straight to a dry pasture? Animals should be gradually changed over to their new feed to ensure they do not lose condition. This may involve using supplements which could include dry lick/urea blocks.

## MANAGING CATTLE TICKS

For ticky areas, bulls should be vaccinated prior to transport and given another booster afterwards. Remember males are more susceptible to ticks than females.

# DISCLAIMER AND PRIVACY INFORMATION

## Attention Buyer

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

## Parent Verification Suffixes

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA.

SV : the sire has been verified by DNA.

DV : the dam has been verified by DNA.

# : DNA verification has not been conducted.

E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

## Privacy Information

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

### BUYERS OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO ANGUS AUSTRALIA

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its database and disclosing that information to its members on its website.

I, the buyer of animals with the following idents.....  
.....

from member.....(name) do not consent to Angus Australia using my name, address and phone number for the purposes of effecting a change of registration of the animals I have mentioned above that I have purchased, maintaining its database and disclosing that information to its members on its website.

Name: ..... Signature: .....

Date: .....

Please forward this completed consent form to Angus Australia, 86 Glen Innes Road, Armidale NSW 2350.

If you have any questions or queries regarding any of the above, please contact Angus Australia on (02) 6773 4600 or email [office@angusaustralia.com.au](mailto:office@angusaustralia.com.au)

# UNDERSTANDING THE TRANSTASMAN ANGUS CATTLE EVALUATION (TACE)

## What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

## What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

## Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

## Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals in Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes. For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

## Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

## Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

## UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

|                 |                   |                 |  |  |
|-----------------|-------------------|-----------------|--|--|
| Birth           | <b>CEDir</b>      | %               | Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.   | Higher EBVs indicate fewer calving difficulties in 2 year old heifers. |
|                 | <b>CEDtrs</b>     | %               | Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.  | Higher EBVs indicate fewer calving difficulties in 2 year old heifers. |
|                 | <b>GL</b>         | days            | Genetic differences between animals in the length of time from the date of conception to the birth of the calf.  | Lower EBVs indicate shorter gestation length.                          |
|                 | <b>BW</b>         | kg              | Genetic differences between animals in calf weight at birth.   | Lower EBVs indicate lighter birth weight.                              |
| Growth          | <b>200 Day</b>    | kg              | Genetic differences between animals in live weight at 200 days of age due to genetics for growth.  | Higher EBVs indicate heavier live weight.                              |
|                 | <b>400 Day</b>    | kg              | Genetic differences between animals in live weight at 400 days of age.   | Higher EBVs indicate heavier live weight.                              |
|                 | <b>600 Day</b>    | kg              | Genetic differences between animals in live weight at 600 days of age.   | Higher EBVs indicate heavier live weight.                              |
|                 | <b>MCW</b>        | kg              | Genetic differences between animals in live weight of cows at 5 years of age.  | Higher EBVs indicate heavier mature weight.                            |
|                 | <b>Milk</b>       | kg              | Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.   | Higher EBVs indicate heavier live weight.                              |
| Fertility       | <b>DtC</b>        | days            | Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.  | Lower EBVs indicate shorter time to calving.                           |
|                 | <b>SS</b>         | cm              | Genetic differences between animals in scrotal circumference at 400 days of age.   | Higher EBVs indicate larger scrotal circumference.                     |
| Carcase         | <b>CWT</b>        | kg              | Genetic differences between animals in hot standard carcase weight at 750 days of age.   | Higher EBVs indicate heavier carcase weight.                           |
|                 | <b>EMA</b>        | cm <sup>2</sup> | Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcase.  | Higher EBVs indicate larger eye muscle area.                           |
|                 | <b>Rib Fat</b>    | mm              | Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.  | Higher EBVs indicate more fat.   |
|                 | <b>P8 Fat</b>     | mm              | Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcase.  | Higher EBVs indicate more fat.   |
|                 | <b>RBV</b>        | %               | Genetic differences between animals in boned out saleable meat from a 400 kg carcase.  | Higher EBVs indicate higher yield.                                     |
|                 | <b>IMF</b>        | %               | Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcase.   | Higher EBVs indicate more intramuscular fat.                           |
| Other           | <b>NFI-F</b>      | kg/day          | Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.   | Lower EBVs indicate more feed efficiency.                              |
|                 | <b>Doc</b>        | %               | Genetic differences between animals in temperament.  | Higher EBVs indicate better temperament.                               |
| Structure       | <b>Foot Angle</b> | score           | Genetic differences in foot angle (strength of pastern, depth of heel).  | Lower EBVs indicate more desirable foot angle.                         |
|                 | <b>Claw Set</b>   | score           | Genetic differences in claw set structure (shape and evenness of claws).   | Lower EBVs indicate more desirable claw structure.                     |
| Selection Index | <b>ABI</b>        | \$              | Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems. | Higher selection index values indicate greater profitability.          |
|                 | <b>DOM</b>        | \$              | Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade.  | Higher selection index values indicate greater profitability.          |
|                 | <b>HGRN</b>       | \$              | Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 250 day feedlot finishing period for the grain fed high quality, highly marbled markets.   | Higher selection index values indicate greater profitability.          |
|                 | <b>HGRS</b>       | \$              | Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers.   | Higher selection index values indicate greater profitability.          |

## EBV Quick Reference for Merridale Angus Sale

| Animal Ident | Calving Ease |      |      |      | Birth |     |      | Growth |      |     |      | Fertility |      |       |      | Carcass |      |       |       | Other |      |      |      | Selection Indexes |  |  |  |
