SALE CATALOGUE DISCLAIMER

All reasonable care has been taken in ensuring the information provided in this catalogue is correct at the time of publication. The vendors take no responsibility for the accuracy, reliability and/or interpretation of the information supplied in this brochure. Purchasers must satisfy themselves that the livestock offered meets individual requirements. The vendors retain the right to use photographs and/or information held on particular animals now and into the future.

SAFETY DISCLAIMER

The owners, employees and representatives of Wormbete Simmentals and VC Simmentals accept no liability for any accidents that may occur at the Allawah Sale Complex. Although such occurrences are rare, any persons attending the Wormbete Simmental Sale do so at their own risk.

You can count on us.

Our Stud Philosophy.....

"Breed fertile, robust, easy doing, structurally sound and commercially relevant Simmental cattle that are proven for longevity and performance.

Uphold the principles of integrity, honesty and transparency in our actions, and in our liaison with clients and other breeders.

Be pleased but not complacent, focused but with vision, educated but still willing to learn."

A Warm Welcome

Unfortunately for many 2020 was extremely challenging, however for those of us in the business of beef and agriculture in general, overall it was a year to put a bounce back in the step. Record livestock prices, the arrival of long awaited rainfall, an opportunity to replenish silage and hay reserves and again see our cattle contentedly grazing paddocks of grass saw us entering 2021 with a renewed sense of optimism and enthusiasm. As a family enterprise we've embraced this sense of energy as together we look to the future and the path ahead for our stud.

We remain committed to our stud philosophy and breeding protocols. We know our cattle and we know their history and as such we breed them to be adaptable, resilient and profitable. We run our cattle with a commercial focus and are continuously advancing the consistency and productivity of our female herd. By running our cattle in large contemporary groups we gain the benefits of better comparisons between the performance of our females and their breeding efficiency, as well as the improved utilisation seasonally of available pasture and grazing crops as we manage our land, soil and water more sustainably and regeneratively.

We remain motivated by the quality of our cattle which has held us in high stead in the Simmental breed in Australia for 49 years. We admire great cattle whatever the breed, and are constantly aiming for improvement in our own herd whilst remaining true to our core breeding principles.

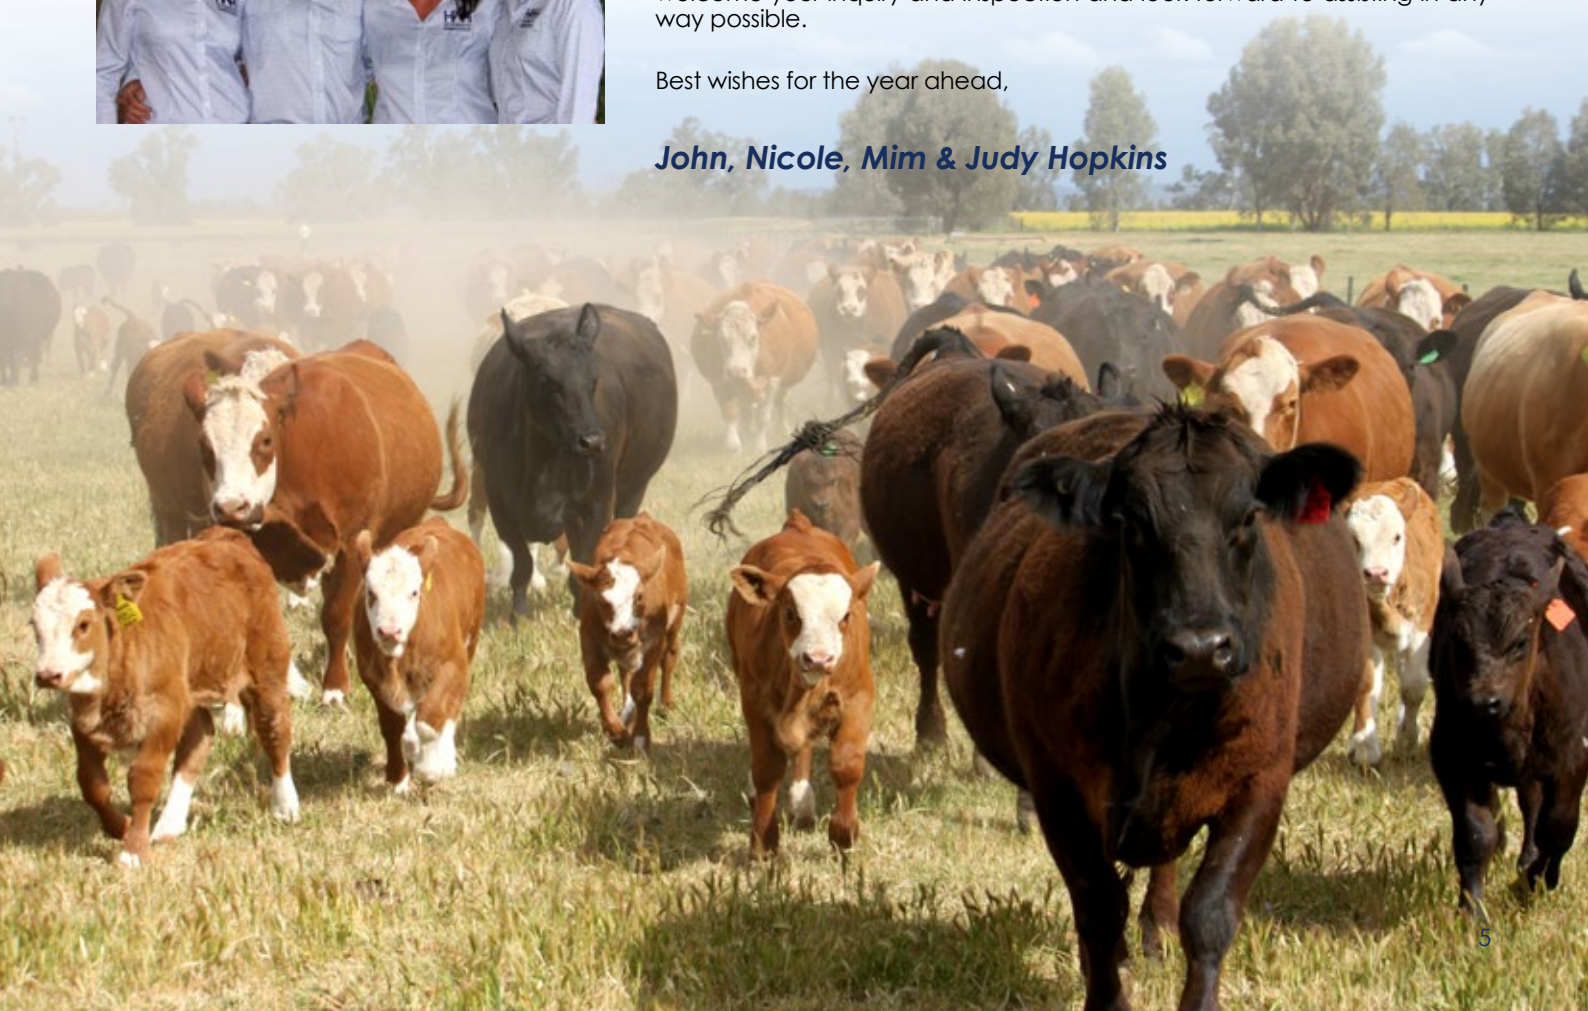

This catalogue contains a top shelf line up of PTIC Simmental females and Simmental and SimAngus bulls for your consideration. Within it is our final offering of autumn drop calves as we finalised our transition to a Spring calving in 2020. All sale animals are backed up by a full complement of performance data, structural and docility assessments, animal health and fertility checks. With the anticipated increase in unsighted purchases this year, we have aimed to make the catalogue as comprehensive as possible with the inclusion of detailed genetic and phenotypic information.

We are pleased to welcome Stuart and Sam Moeck to join us for our 8th year together. As committed breeders also, the cattle on offer from our two studs will ensure the specific needs of buyers are easily met.

Thank you for your interest in and the support of our program. We welcome your inquiry and inspection and look forward to assisting in any way possible.

Best wishes for the year ahead,

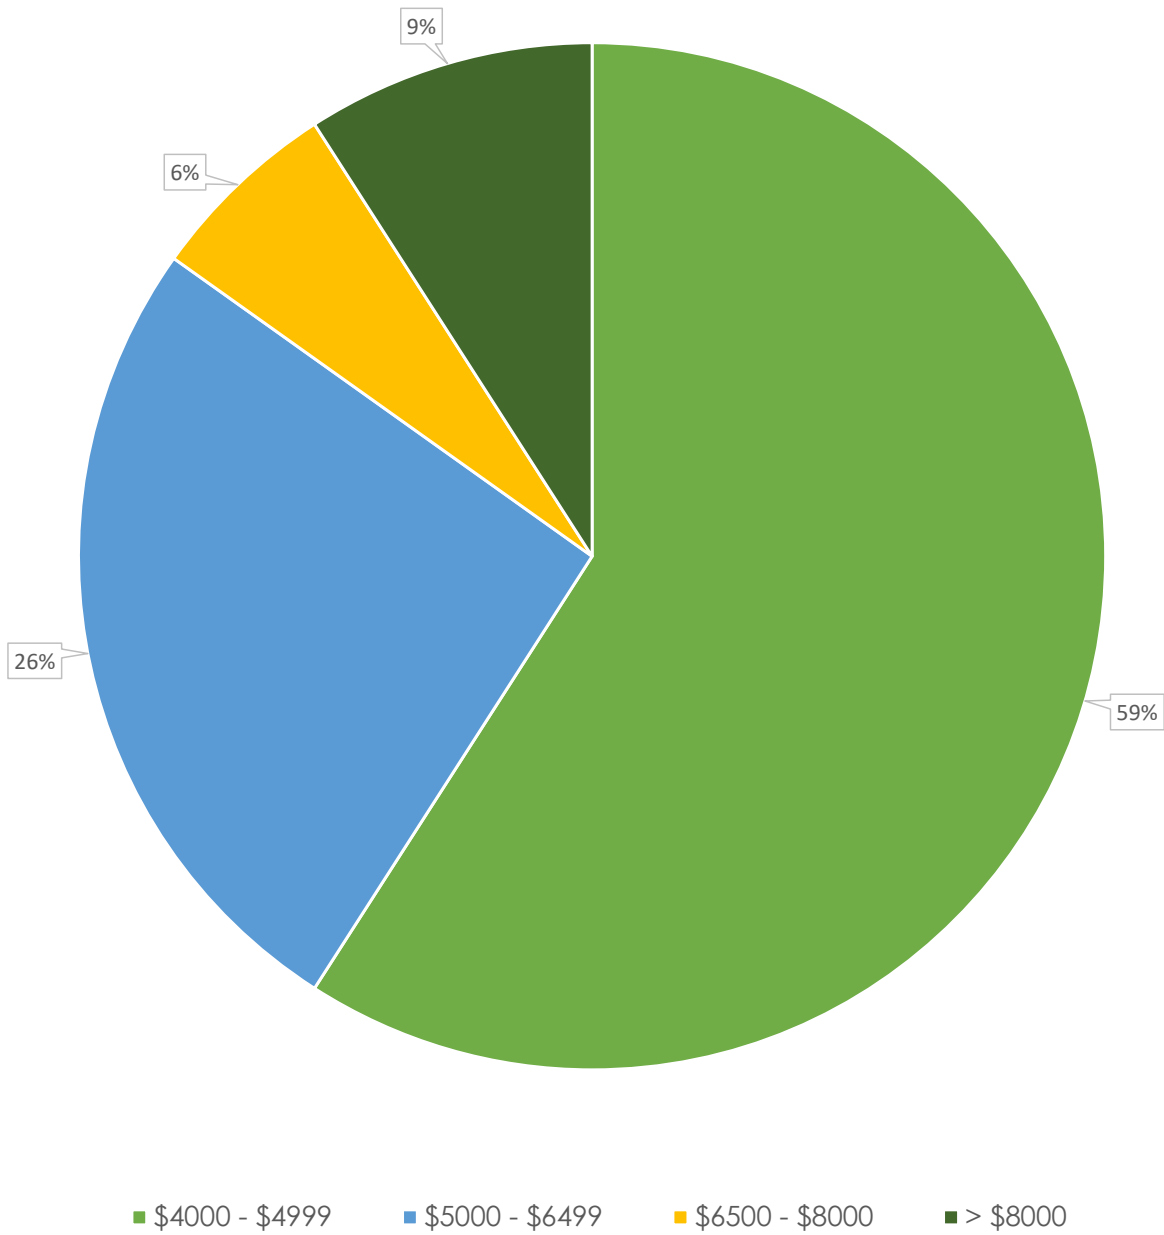

John, Nicole, Mim & Judy Hopkins

AFFORDABILITY

From 2018 to 2020 over 50% of the bulls auctioned on sale day sold for under \$5,000 signifying value for commercial producers looking for functional, high quality Simmental & SimAngus bulls that are bred for performance, efficiency, longevity and profitability. There is no compromise on standards, just the opportunity for producers to obtain first class, consistent cattle at genuine prices that will deliver the results they are looking for.

Sale Price Breakdown 2018 - 2020

Wormbete and VC bulls represent value for the strategic dollars invested by our clients in improving the genetic advancement of their breeding herds and their ultimate bottom line.

VC SIMMENTALS

Every year one of the things we look forward to the most & dread the most all at the same time is the welcome letter. However, I find it a task to say something new that also reflects our goals our vision & our dreams. This last year we have been able to push the VC program in new uncharted waters by doubling down all the things we do. We have doubled the flush cows, doubling the cow herd & purchasing double the amount of overseas sires/embryos plus purchased two new donor cows in Canada. One of the things that really stands out to us was "Don't Give Up on Your Dreams" **#MakingSimmentalsGreat**

As I was preparing to write this year's introduction, I was thumbing through our old sale catalogues & just reflected on how much our program at VC has evolved in time. I remember being that 16-year-old kid that aspired to supply & demonstrate the benefits of Simmental cattle to the Australian Commercial Industry, VC has been working on this for 22 years. I still find it hard to understand why the Simmental Breed is not as big in Australia compared to other parts of the world.

We have all heard that saying do what you love & you will never work a day in your life & it is so true. Here at VC we breathe & live pure Simmental. Agriculture commodities were at a new level of high in all sectors, this year's Autumn weaner sales are off to an extremely good start & for the most part the crops are in the bins & selling at a high price. Amidst the economic chaos & political & media mayhem we still have a booming industry so I ask you were would you rather be.

We believe this is one of your best opportunities to buy in & invest in your future breeding programs. We feel our 2021 sale draft is the next level in the VC Program. We have 4 18-month-old sale bulls & 6 outstanding next level yearlings comprising of all ET calves. Here at VC we will be focusing more & more on selling yearlings as we believe it is the fastest genetic gain in the beef industry.

The cow herd at VC is what sets us apart from the competition these females are direct from our core & featuring lines that have perversely never been sold. Featuring two Strike females PTIC & 2 PTIC Traditional females plus 3 unjoined black heifers. All selling with the freshest new genetics, buy with confidence that you are getting into the very top end in the Simmental Industry in Australia.

We are extremely grateful to the Hopkins Family for giving us this opportunity to join them in the 8th on-property sale. We believe that both studs combined will ensure that there is something to offer for every buyer. We thank you & our valued clients, we hope you like our hospitably & enjoy your purchases.

Kind Regards, **Stuart & Samantha Moeck**

SALE INFORMATION

INSPECTION

We welcome inspection of the cattle before the sale to provide you with the necessary time to ensure you are selecting the correct bull or female for your program. Please contact John on 0427 102 748 or Stuart on 0419 465 242 to arrange this. Inspections will be from 9am on sale day, Friday 5th March 2021. Selling will commence at 11am. All times quoted are NSW Daylight Savings time.

DIRECTIONS

The sale will be held on property at "Allawah" ILLABO, which is located 7kms south east of the village of Illabo. From Illabo, turn over the railway line and veer left towards Eurongilly and travel south east on Eurongilly Road for approximately 4kms then turn left into Allawah Road and travel 3.4kms to "Allawah". The property entrance is located on the right. Allawah is located 70kms north east of Wagga Wagga, 25kms north east of Junee and 35kms south west of Cootamundra.

TRANSPORT

Ben Makeham of Makehams Transport will be present on sale day and is the recommended carrier.

Wormbete and VC will offer FREE CARTAGE:

- to buyers residing within a 100km radius of the Allawah sale complex.
- along the major route from Illabo to Dubbo in the north and from Illabo to Wodonga in the south.
- Australia-wide (mainland) to any registered individual buyer who purchases three (3) or more sale lots.

REBATE

Selling agents are Nutrien Livestock. Outside agents are entitled to a 4% rebate under the **strict following conditions**:

- introducing the buyer in writing to the selling agent at least 24 hours prior to the sale and settling within 7 days, and
- where border restrictions do not impede their attendance, the agent who has provided the introduction must attend the sale with their client or on their client(s) behalf.

TRANSFER

All sale cattle are registered with Simmental Australia and are eligible for transfer to your ownership. Please advise on your bidding registration sheet.

INSURANCE

We recommend insuring your purchases at the fall of the hammer. A Nutrien Insurance representative will be present on sale day to assist with this. All cattle are at the purchaser's risk from the fall of the hammer.

GST

All lots are sold exclusive of GST.

ACCOMMODATION

If you require accommodation in the area, we are happy to provide details based on your travel origin. A range of accommodation options are available in the nearby towns Junee, Cootamundra, Gundagai and Wagga Wagga. Please contact us if we can be of assistance.

BIDDING

If you are unable to make it to Illabo, the sale will be interfaced on Auctions Plus. Please see Page 14 for details on how to register and bid using the Auctions Plus platform.

Phone bidding can be arranged by contacting the Nutrien agents Tim Woodham and James Croker, or John and Stuart.

PHOTOS & VIDEOS OF SALE LOTS

Videos of all lots will be available on Auctions Plus prior to sale day. Photos and videos of sale lots will also be posted on the respective stud Facebook pages and the Wormbete Simmentals website - www.wormbetesimmentals.com.au

DNA, POLLED AND COAT COLOUR TESTING

All bull and heifer sale lots have been 100K DNA tested and parent verified to provide you with pedigree, polled and coat colour assurance. The results for each sale lot are detailed in the catalogue.

STRUCTURAL ASSESSMENT

All sale lots have been inspected and passed an independent accredited structural assessment (feet and legs). These assessments are included in the sale catalogue on Page 13 and are a valuable source of additional information - particularly where you are unable to attend the sale due to travel restrictions. Wormbete cattle were inspected by Liam Cardile of BeefXcel (Accreditation No. 1033) on 22 December 2020. VC cattle were inspected by Roger Evans of Bovine Scanning Services (Accreditation No. 1018) on 22 December 2020.

HEALTH & FERTILITY

Both Wormbete and VC herds are Accredited J-BAS Status 7 herds so livestock are free to move anywhere in Australia except Western Australia.

All cattle have been tested free of Pestivirus. All bulls and heifers have undergone a full 7 in 1 and Pestivirus vaccination program with booster vaccinations prior to sale. Wormbete cattle have been drenched with Ivomec Injectable. VC cattle have been drenched with Ivomec.

All Wormbete bulls have been semen tested by Independent Breeding Services. All VC bulls have been semen tested by Ironmines Veterinary Clinic. All Wormbete heifers were PTIC by Shane Thomson of Holbrook Vet Centre on 4 January 2021.

SALE INFORMATION

SAFETY OF VISITORS

When entering sale pens, please ensure your safety by taking note of your surrounds and do not crowd sale animals. Persons under the age of 16 should not enter sale pens. Animals being offered for sale are selected for their quiet temperament under normal yard handling and paddock conditions, however sale day is not considered a normal day in the life of a bull or heifer and is quite different to anything they have ever experienced. We would like you to be aware of this and kindly request that you use common sense and be alert at all times. We do not envisage any problems on sale day but feel it is our duty of care to advise you of the importance of respecting our policy of always practicing the responsible husbandry of cattle.

BRINGING YOUR BULL OR HEIFER HOME

Our bulls and heifers have always been run in mobs and never on their own. We recommend that when you bring them home you have some other cattle e.g. pregnant cows or steers in the cattle yards so they have company to settle in with. Provide them with feed and water and give them time to become familiar with their new surrounds. Wormbete cattle have never been on a truck so that will also be a new experience for them.

Our cattle have been mustered predominantly by motor bikes and ATV's and have also been worked regularly by kelpie dogs.

GUARANTEE

To the best of our knowledge all of the cattle are in sound working order at the time of the sale and where applicable have been independently evaluated for fertility and structural soundness. None of the sale animals have had their feet trimmed in any way.

Following the sale, it is important that normal care be taken and good husbandry practices be observed with regard to the management of your valuable purchase. In the rare event of a bull proving to be infertile or incapable of natural service within 6 months of the purchase date, the vendor will credit the purchase price, less the salvage of the bull, provided the problem is not caused by injury, illness or disease incurred after taking delivery.

Claims must be accompanied by a relevant veterinary certificate when requested by either vendor. Vendors retain the right to obtain an independent veterinary confirmation of any claim.

SALE DAY CATERING

A welcoming morning tea, lunch and cold drinks will be available on sale day compliments of the vendors for those who are able to attend.

Covid Safe regulations for the preparation and serving of food and drink will be in place.

SIMMENTAL GROUP BREEDPLAN - INTERPRETING THE FIGURES

Both Wormbete and VC are committed supporters of performance recording and undertake a committed recording of performance traits including, Gestation Length, Calving Ease, Birthweight, 200, 400 and 600 Day Weights, in addition to scanning for EMA, IMF, Rib and Rump measurements, measuring Scrotal Circumference, plus Docility Scoring.

An animals breeding value is its genetic merit, half of which will be passed onto its progeny. While it is not possible to determine an animals true breeding value, it is possible to estimate it. These estimates are called **Estimated Breeding Values (EBVs)**. The accuracy of an EBV will increase as more information is collected on that animal and its relatives e.g. progeny.

In the calculation of EBVs, the performance of individual animals within a contemporary group is directly compared to the average of other animals in that group. A contemporary group consists of animals of the same sex and age class within a herd, run under the same management conditions and treated equally. Indirect comparisons are made between animals reared in different contemporary groups, through the use of pedigree links between the groups.

The value of EBVs over raw data is that they are the fast track to improving the genetic profile and bottom line performance of any herd. EBVs give a benchmarked breeding predicatability (genotype) while raw data is a scale of how the animals presents (phenotype).

JANUARY 2021 SIMMENTAL GROUP AVERAGE EBV'S FOR 2019 BORN CALVES (ABBREVIATED)																
	BIRTH		GROWTH				FERT	CARCASE					INDEXES			
BREED AVERAGE	GL	BW	200D	400D	600D	MILK	SS	EMA	RIB	RUMP	RBY	IMF	DM	EM	NT	VT
	-1.4	+0.8	+20	+36	+45	+8	+0.5	+2.5	+0.3	+0.1	+0.6	+0.2	+38	+46	+24	+34

BIRTH EBVs

GL: Gestation length EBVs are calculated from both the joining date and date of birth of calves. Lower Gestation Length EBVs are considered more favourable.

BWT: is based on the measured birth weight of progeny and adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. Whilst low Birth Weight EBVs are favoured for calving ease they can also be associated with lower overall growth potential.

GROWTH/WEIGHT EBVs

200D: (KG) is calculated from the weight of the animals taken between 80 and 300 days of age and is the best estimate of an animals genetic merit for growth to early ages.

400D: (KG) is calculated from the weight of progeny taken between 301 and 500 days of age and is the best estimate of an animals genetic merit for yearling weight.

600D: (KG) is calculated from the weight of progeny taken between 501 and 900 days of age and is the best estimate of an animals genetic merit for growth beyond yearling age.

MILK EBV: Milk EBVs provide an estimate of the maternal contribution of a dam to the 200 day weight of her calf. In the case of sires, this estimates the maternal contribution that his daughters will make to the 200 day weight of their progeny. Larger, more positive, 200 Day Milk EBVs are generally more favourable, depending on environment.

FERTILITY EBV

SCROTAL SIZE (SS): (CM) is an indicator of male fertility in regard to semen quality and quantity. Higher EBV's indicate higher fertility. SS is also positively associated with female fertility and therefore selection for increased SS will result in reduced age at calving of female progeny.

CARCASE EBVs

EMA: Eye Muscle Area EBV (cm²) estimates genetic differences in EMA at the 12/13th rib site of a 300kg carcass. A higher EBV indicates better muscling on animals. Sires with relatively higher EBVs are expected to produce better muscled and higher percentage yielding progeny.

RIB FAT & RUMP FAT EBVs: Rib Fat EBV (mm) estimates the genetic differences in subcutaneous fat depth at the 12/13th rib site and P8 rump site and are adjusted to a standard 300 kg carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

CARCASE EBVs (CONTINUED)

RBY: Retail Beef Yield (%) represents total (boned out) meat yield as a higher percentage of a carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses and are generally considered more favourable.

IMF%: Intra-muscular Fat Percent EBV (%) is an estimate of the genetic difference in the percentage of intramuscular fat at the 12/13th rib site in a 300kg carcass. Depending on market targets, larger more positive values are generally more favourable.

INDEXES

Domestic Maternal Index: Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g. Angus cows) targeting the domestic supermarket trade. Steers are either finished on grass or grain (e.g. 60-70 days). Steers are marketed at 430 kg live weight (240 kg HSCW and 6 mm P8 fat depth) at 14 months of age. Daughters are retained for breeding.

Export Maternal Index: Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia targeting the export trade. Steers are finished on grain (e.g. 120 days) and marketed at 700 kg live weight (380 kg HSCW and 8 mm P8 fat depth) at 28 months of age. Daughters are retained for breeding.

Northern Terminal Index: Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Northern Australia targeting the export trade. Steers are finished on grass and marketed at 630 kg live weight (345 kg HSCW and 12 mm P8 fat depth) at 28 months of age. This is a terminal production system therefore no daughters are retained for breeding.

Vealer Terminal Index: Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia targeting the vealer trade. Vealers are weaned and sold at 8 months of age weighing 350 kg (195 kg HSCW and 6 mm P8 fat depth). This is a terminal production system therefore heifers are not retained for breeding purposes.

PLEASE NOTE: ONLY JANUARY 2021 SIMMENTAL TRANS TASMAN GROUP ESTIMATED BREEDING VALUE (EBVs) CAN BE VALIDLY COMPARED BETWEEN DIFFERENT HERDS

BEEF CLASS STRUCTURAL ASSESSMENT SYSTEM

Structural soundness must be a primary reference for improving future progeny regardless of whether they are future breeders or destined for the dinner plate. Selecting animals with superior structural soundness is paramount to genetically improving structural traits in a beef breeding enterprise. The use of the Beef Class Structural Assessment System in the Australian seedstock industry has produced a marked improvement in herds which have shown a commitment to using the information appropriately.

It's widely recognised that structural problems in cattle have a substantial effect on both the reproductive and growth performance of a beef herd.

Structural problems in sires have detrimental effects on conception rates, calving patterns and thus profitability. Similarly, females with inadequate structural characteristics are more prone to weaning lighter calves or conceiving later in the breeding season than their more functional counterparts. These structural problems are filtered through the supply chain reduced income for the producer or feedlot, thus reducing the overall productivity of the Australian Beef Industry.

Both Wormbete and VC are committed to the annual independent structural assessment of all sale cattle and all replacement females by accredited INDEPENDENT assessors, Liam Cardile of BeefXcel (Wormbete), and Roger Evans of Bovine Scanning Services (VC). As such, we continue to see the benefits of structural improvements within our herds first hand.

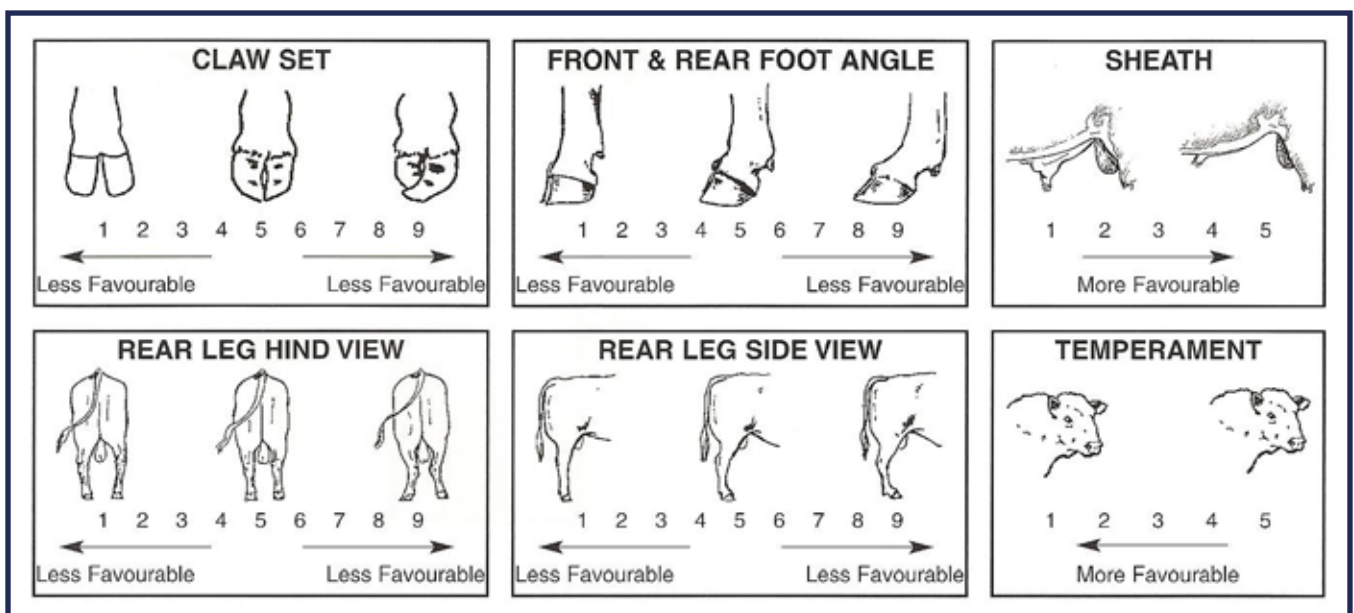

Wormbete cattle were assessed by Liam Cardile on 22nd December 2020. VC cattle were assessed by Roger Evans on 22nd December 2020.

HOW TO USE THE SYSTEM:

The Beef Class Structural Assessment system is a collection of unbiased factual data measuring claw set, front and rear foot angle and rear leg side and hind view. Sheaths and temperament are also scored by the assessor.

The Beef Class Structural Assessment System uses a 1 to 9 scoring system:

- A score of **5** is ideal. (Note: Temperament Score of 1 is preferable).
- A score of **4 or 6** shows slight variation from ideal, but this includes most animals. An animal scoring 4 or 6 would be acceptable in any breeding program.
- A score of **3 or 7** shows greater variation but would be acceptable in most commercial programs. However, seedstock producers should be vigilant and understand that this score indicates greater variation from ideal.
- A score of **2 or 8** are low scoring animals and should be looked closely at before purchasing.
- A score of **1 (except temperament) or 9** should not be catalogued and are considered culls.

AuctionsPlus

How to Register and Bid on AuctionsPlus

- 1 Go to www.auctionsplus.com.au to register at least 48 hours before the sale.
- 2 Select “**Sign Up**” in the top right hand corner.
- 3 Fill out your name, mobile number, email address and create a password.
- 4 Go to your emails and confirm the account.
- 5 Return to AuctionsPlus and log in.
- 6 Select “**Dashboard**” and then select “**Request Approval to Buy**”.
- 7 Fill in buyer details and once completed go back to Dashboard.
- 8 Complete buyer induction module (approx. 30 minutes).
- 9 AuctionsPlus will email you to let you know that your account has been approved.
- 10 Log in on sale day and connect to auction.
- 11 Bid using the two-step process – unlock the bid button and bid at that price.
- 12 If you are successful, the selling agent will contact you post sale to organise delivery and payment.

- LANCASTER C370

Again, this year we are giving you the chance to acquire genetics of a cow that we mark quite high in our books. This is the first ever female we have sold out of the ever so reliable Lancaster Strike K176. She is impressive in her appearance, but her track record is what sets her apart from the others. Q020's dam production goes on and on with many other accomplishments in her short career. You cross her power and functionality, extension, muscle definition and unparalleled softness with above average EPD profile. Broken in to show and quite possibly the most exciting thing, this lot is PTIC to Mader Walk This Way 224B due to calve 12th August 2021.

PURCHASER:**PRICE: \$****2****VC STRIKE Q042 (Pp) (B)****BORN:** 14.10.2019 **ID NO:** ZMJQ042 **HPS:** Hetero Polled **COLOUR:** Hetero Black **EYE PIG:** 100/100 **GRADE:** Pure

A half sibling to VC Leah P021 that sold to Bunyip Black Simmentals for \$8500 in 2020. With plenty of length and extra frame score she combines the elite Lancaster on the bottom side and the best breeding sire to date, VC Marksman. Rest assured we will be seeing more of this female in the future. Carrying a positive PTIC to Hart State Of War 056C due to calve 12th August 2021.
