Information

Vendors are reminded of the following:

- When a ram is sold by a vendor the rights to sell his semen goes to the new owner.
- If a vendor is selling a Ram they must declare that they have retained semen for their own use.
- Semen should only be retained for the vendors own use and not for sale unless stated prior to the sale that the retained semen will be marketed.

PLEASE NOTE

Rams that have not been sold during the course of the auction including Passed In lots or withdrawn lots CANNOT be sold by private treaty excluding Nutrien Russell post sale on the sale premises (Cobar Showground).

**RAMS PURCHASED ON AUCTIONSPLUS MUST BE PICKED UP NO LATER THAN 12PM 11th AUGUST 2021.
NUTRIEN RUSSELL WILL PROVIDE HAY AT PURCHASERS COST.**

Covid 19 – Please ensure social distancing is maintained 1.5 meters. Hand sanitizing units will be provided. Nutrien Russell will ensure all buyers sign in and complete a Covid -19 check sheet prior to entry. FACEMASK MUST BE WORN AND COVID SIGN-IN MUST BE USED.

Conditions of sale

- All rams presented for sale must be from an Ovine Brucellosis accredited flock.
- All animals presented for sale will be from a property with a non-infected status for Ovine Johnes Disease. (Purchasers need to determine the property status of any purchase for suitability for entry to their state).
- All sheep will be checked for weight, body score, teeth, testicals and soundness on arrival to the Cobar Showgrounds.
- Auction Selling Terms are available at registration table prior to commencement of sale.
- A Representative from Nutrien Russell must be present when taking delivery of purchased lots. Please attend sale office prior to taking delivery of Rams to acquire delivery slip and present to Nutrien Russell delivery staff.

Disclaimer

Nutrien Russell accepts no responsibility for any mistakes or incorrect information compiled in this catalogue. The information has been collated as provided by the vendors. The selling agents are not responsible for guaranteeing future health and reproduction capability of sale entries, this responsibility belongs to the vendor, and any disputes are to be settled between the vendor and purchaser. Nutrien Russell or their staff will not be held responsible for any covid 19 outbreaks. Adequate preparation and planning is undertaken to manage risk and risk is solely placed on the intended purchasers / groups to ensure risk mitigation techniques are adhered to. Please see state regulations prior to arrival.

Dusty Downs & Davrick Boers- Premium quality western bred boer goats that will perform in the harsh western conditions.

Dusty Downs Boer Goats - Kevin and Narelle Spears of Dusty Downs Hermidale are Breeders of red and Standard Boer goats with over 35 years' experience in the goat industry. The breeding program focuses on conformation fertility and high vigor to ensure sustainability and performance in the western area these goats are rangeland bred and raised on natural native grasses. By using the foundation bloodlines from the well-established Collaroy breeding program-Highveld, Megabucks and Stone Cold, they aim to further enhance these breed traits. This is a great opportunity to secure quality goats.

Davrick Boer Goats - Dave and Rik Allen of Nullogoola Station Cobar have been using Brenton Park Standard Boer Bucks for over 3 years to improve carcass weights and fertility. These bucks come from 15 years of selective breeding by Brenton Park Boers sourced from the top genetics from leading Australian breeders Tindarra, Farm World, and Terraweena. Early last year we purchased 80 pure breed Brenton Park infused standard Boer does enabling us to breed our own pure bucks to use in our rangeland operation. All our goats are 100 percent station raised in the rangelands west of Cobar.

GENETIC ASBVS Australian Sheep Breeding

Values are an estimate of an animal's true breeding value based on pedigree and performance recorded information. They are essentially a projection of how that animal's progeny will perform for a range of traits. It is important to know that ASBVs are a tool for breeding sheep, they do not provide all the answers. Visual selection is very important to cull sheep that will not be functional in a commercial production system, regardless of how good the ASBVs are. ASBVs provide a measure of the animal's genetic potential independent of environmental influences that can affect the physical appearance. WEIGHT ASBVs describe the animals' genetic merit for growth rate.

WWT - Rams with a more positive weaning weight (WWT) will on average, produce lambs that grow quicker to weaning – 100 days. **Average for Dorpers is 4.9 and the top 10% is > 6.7**

PWT - Rams with more positive ASBVs for post weaning weight (PWT) produce lambs that grow quicker and reach target weights in a shorter time. Post weaning weight estimates the genetic difference between animals at 225 days of age. **Average for Dorpers is 8.2 and the top 10% is > 10.7** CARCASS FATNESS ASBVs describe the value of an animal's genes for fat depth at a constant weight – a negative ASBV means a genetically leaner animal.

PFAT - Rams with a more negative ASBV for post weaning fat (PFAT), will produce lambs that are leaner, at the same weight. Post weaning fat estimates the genetic difference between animals at 225 days of age. Sheep with positive fat will survive better in tough conditions and dry times. Fat increases the ability of breeding ewes to maintain weight and condition in "tough times." Also, increases the eating quality due to intramuscular fat. CARCASS MUSCLING ASBVs describe the value of animals' genes for eye muscle depth at a constant weight – a positive ASBV means a genetically thicker-muscled animal, and one that will have slightly more of its lean tissue in the higher-priced cuts. **We recommend a positive PFAT**

PEMD - Rams with more positive ASBVs for eye muscle depth (EMD) produce lambs that have a higher lean meat yield. Post weaning muscle depth estimates the genetic difference between animals at 225 days of age. A positive PEMD is best as it increases the value of the carcass, by increasing the amount of lean meat it contains and increases dressing percentage. Increases the amount of meat on higher priced cuts. Higher muscling is favorably related to reproductive rate. **Average for Dorpers is 1.2 and the top 10% > 2.2**

WORM EGG COUNT (WEC) ASBVs describe the value of animals' genes for carrying worm burdens – a combination of being genetically less likely to pick up worms and being better at getting rid of them. Resistance can result in fewer drenches being required each year. The best way to increase the genetic resistance of your flock to worms is to use rams with better than average worm resistance. Worm Egg Count (%) - Rams with more negative WEC ASBVs produce progeny who have a higher genetic potential to resist worm burdens. Lower WEC ASBVs are desirable. **Average for Dorpers is -12 and the top 10% is > -43 -21**

MCP INDEX (MATERNAL CARCASS PRODUCTION) A combination of ASBVs into a single value. Each ASBV is weighted to reflect the traits emphasis in the breeding objective. The Maternal Carcasses Production (MCP) index ranks animals on their suitability for a self-replacing system with a carcass production focus. This index balances the main economic traits relevant to Maternal breeders who consider that fleece traits or worm egg count are not economically important. This allows higher gains to be made for growth and carcasses traits. The index also assumes no mating to terminal sires. The index aims to maintain adult weight at current levels. **Average for Dorpers is 133.7 and the top 10% is > 137.4.**

WWT = 4.9 PWT = 8.2 PEMD = 1.2 PFAT = 0.0 MCP = 133.7
