

Sale Information

GST: Our Sale will be a GST Exclusive Sale, which means GST is to be added onto the purchase price at the fall of the Auctioneer's hammer.

REBATE: 2% Rebate offered to outside agents introducing successful buyers. To qualify contact vendors prior to the day of sale.

INSPECTION: Inspections can be made from 10.00am on the day of the sale or by contacting the Carlow's or the participating agents prior to the sale.

SALE LOCATION: Dulcidene Stud Selling Complex is situated 18kms from Dubbo City. Map on inside back cover.

PHONE BIDDING: Contact Agents prior to sale.

ACCOMMODATION: Good accommodation is available in Dubbo.

HEALTH: All bulls have been treated with 7 in 1 and Vibrovax and received cydectin pour on in the lead up to the sale. Angus bulls have received 2 x Pestigard, 2 x Vibrovax & 1 x Longrange.

PESTIVIRUS:

All bulls have tested negative to Pestivirus

JOHNE'S DISEASE:

Both herds are JBAS 6

FEET: No foot trimming, all lots feet untouched

FERTILITY: All bulls will pass semen morphology testing

INSURANCE: It is recommended insurance be effected at the fall of the hammer. Insurance representative will be in attendance.

DELIVERY: Delivery will be available on sale day, animals can remain at Kidman by arrangement and every assistance will be given to arrange delivery as requested. A delivery instruction slip must be filled in and handed to the selling agents.

SUPPLEMENTARY SHEETS: Will be available on Sale Day containing weights and scrotal measurements plus further information.

SELLING SYSTEM AND BUYER'S REGISTRATION: All lots will be sold subject to the usual terms and conditions governing auction sales. Intending purchasers should obtain a Buyer's Number and registration slip available from the selling agents prior to the sale.

REFRESHMENTS: Morning tea and lunch will be available.

DISCLAIMER: The vendors, family, sale staff and representatives accept no liability for accidents that may occur, although these are rare at cattle sales. Any person attending does so at their own risk. The vendors take no responsibility for personal valuables.

Please bring this Catalogue to the Sale

Every care has been taken in compiling this catalogue to ensure accuracy of information, but no responsibility is accepted.

COVID - 19 Please be aware that we are obliged to abide by the current COVID-19 rules, regulations and restrictions on Sale day. Please take care. Please check in to the QR code available on Sale Day.

Kidman Poll Herefords: Nelson Carlow - 0427 823 832

Kidman Angus: Randall Carlow - 0477 016 983

Taking delivery of your new bull

To help your new bull or bulls settle into their new home as well as possible, we recommend the following.

- All Kidman bulls have been run in mobs all their lives with plenty of mates around and have never been alone.
- It is a good idea to have some of your own cattle in the yard when your new bull or bulls arrive, a handful of steers or some PTIC cows, just something to keep them company whilst they settle in to their new environment.
- At Kidman we handle our cattle quietly and confidently, we always give our cattle respect and our cattle respect us.
- The bulls have not been handled with dogs.

Sale day safety

All the sale bulls have been screened for temperament and are quiet to handle under normal circumstances. However, there are inherent risks associated with cattle handling.

Visitors enter the cattle pens at their own risk. Children must not enter the yards.

People entering the yards are at risk of injury. Be especially alert for bulls fighting and if one is playful with you. Remember the quietest bull is sometimes the most unpredictable.

We do not expect the bulls to be aggressive, but sale day places extraordinary pressure on them as they experience an entirely foreign environment.

We cannot cover every example of the dangers of cattle handling, so please use common sense and be alert at all times.

Poll Hereford History

Kidman Poll Hereford Stud was founded in 1986 by Nelson and Randall Carlow. They named the stud after Sir Sidney Kidman, The Cattle King. The brothers were admirers of Kidman, who put an empire together from very humble beginnings, proving what can be achieved with the right mix of dedication and ambition.

The stud's foundation females were sourced from both local and interstate herds including Corrodgery, Cortina, Ardno, Yagaburne and Heatherdale studs. Honest value for money cattle were selected with a commercial outlook and hard working genetics that could withstand a testing environment at times.

The stud had great guidance from parents Neil and Jenny (now co – principals) whose valuable experience helped cut a few corners. Neil and Jenny previously ran the Dulcidene Poll Hereford Stud which was formed in 1982 with females centred around Sevenbardot bloodlines.

In 1992 a move was made by the Carlow family looking towards the future. The Dulcidene herd was combined with the Kidman herd to carry the Kidman prefix bigger and stronger.

The use of AI over the years has had a major impact with the Kidman breeding program, enabling them to infuse some of the best bulls worldwide into the herd, which is reflected in their success over recent years.

The Carlow family will strive to continue breeding top quality functional cattle into the future with the challenge ahead to advance the stud's breeding reputation within the beef industry.

Breedplan made easy

Breedplan is a performance evaluation program that compares bulls "on a level playing field" for a number of important commercial traits.

The difference between a bull's genetics and the breed benchmark for a range of traits is reported as an Estimated Breeding Value (EBV) – an estimate of how a bull will perform as a parent rather than how he looks on the day.

EBVs can be positive (+) or negative (-), ie, above or below the breed benchmark of zero.

EBVs are calculated from the available performance information on the animal, its parents, progeny and its close relatives within the breed.

The information is adjusted for age, dam age, and for differences between herds, years, season of calving, management effects and for mating and selection biases. The heritability of the trait is also taken into account.

EBVs – what do they tell me about a bull

BIRTH

Birth Weight: The Birth Weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

FERTILITY

Scrotal Size: The Scrotal Size EBV (cm) is an indicator of male fertility. Higher (positive) EBVs indicate higher fertility. Higher SS EBVs are also positively associated with female fertility through earlier age of puberty.

GROWTH

Milk: 200-Day Milk EBV (kg) is an estimate of the contribution that a dam makes to the 200 day weight of her progeny. For sires, this is an indication of the contribution that his daughters will make to the 200 day weight of their calves.

200-Day Growth: The 200-Day EBV (kg) is calculated from the weight of

animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth to early ages (ie. 8-10 months).

400-Day Weight: The 400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight: The 600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

CARCASE

Eye Muscle Area: The EMA EBV (cm²) estimates genetic differences in eye muscle area at the 12/13th rib site of a 300kg dressed carcass.

More positive EBVs indicate better muscling on animals.

Rib Fat: The Rib Fat EBV (mm) estimates the genetic differences in fat depth at the 12/13th rib in a 300kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

Rump Fat: The Rump Fat EBV (mm) estimates the genetic differences in fat depth at the P8 site of a 300kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

Intramuscular Fat Percent: The IMF% EBV (%) is an estimate of the genetic difference in the percentage of intramuscular fat at the 12/13th rib site in a 300kg carcass. More positive EBVs indicate higher marbling.

EBVs on sale cards displayed on sale day may vary from those published in this catalogue.

Australian Hereford Selection Indexes

There are currently four different selection indexes calculated for Australian

Hereford animals. These are:

- Southern Self-Replacing Index
- Southern Baldy Maternal Index
- Northern Self-Replacing Index
- Northern Baldy Terminal Index

Each selection index describes a different production/market scenario and relates to a typical commercial herd using Hereford bulls. Producers are advised to use the selection index that most closely aligns to their production system.

All four selection indexes are focussed on maintaining and improving eating quality. Significant premiums are applied for increasing marble score up to a marble score of 3. Pressure is also applied to early life growth to maintain low ossification scores and good MSA compliance. In addition, each selection index targets the following specifications.

SOUTHERN SELF-REPLACING INDEX

Estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing straight bred Hereford herd targeting the domestic market. Daughters are retained for breeding and so maternal traits are of importance.

Steers are slaughtered at 20 to 22 months of age to produce 300 kg carcasses with 10 mm P8 fat depth. A moderate cost is applied for cow feed costs during the annual feed shortage period.

NORTHERN SELF-REPLACING INDEX

Estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing herd targeting the domestic market. This index is suitable for use by both straight bred Hereford herds and in crossbreeding programs where Hereford bulls are being used over a Bos indicus based cow herd (e.g. flatback). Daughters are retained for breeding and so maternal traits are of importance. Steers are slaughtered at 20 to 22 months of age to produce 340 kg carcasses with 12 mm P8 fat depth. A high cost is applied for cow feed costs during the annual feed shortage period.

SOUTHERN BALDY MATERNAL INDEX

Estimates the genetic differences between animals in net profitability per cow joined in a commercial crossbred herd using Hereford bulls over Bos taurus females (e.g. Angus). A portion of the heifers are retained for breeding and so maternal traits are of importance. The steers and surplus heifers are destined for slaughter at 20 to 22 months of age. Steers produce 300 kg carcasses with 10 mm of P8 fat depth, while heifers produce 270 kg carcasses with 12 mm of P8 fat depth. A moderate cost is applied for cow feed costs during the annual feed shortage period.

NORTHERN BALDY TERMINAL INDEX

Estimates the genetic differences between animals in net profitability per cow joined in a commercial crossbred herd (e.g. flatback) using Hereford bulls over Bos indicus/Tropical females (e.g. Santa

Gertrudis) where all progeny (male and female) are destined for slaughter. Steers and heifers are slaughtered at 20 to 22 months of age. Steers produce 340 kg carcasses with 14 mm of P8 fat depth while heifers produce 300 kg carcasses with 17 mm of P8 fat depth.

Hereford Selection Indexes make bull buying easier. They take the hard work out of knowing how much emphasis you should give to each of the available EBVs when selecting a replacement sire by weighting the available EBVs according to their impact on the long-term profitability of your herd, balancing fertility and maternal traits with growth and carcass traits. The index is in fact a multi-trait EBV that estimates the relative value of each animal to your chosen market goal – reflecting the extra earning capacity per cow joined in a self-replacing commercial herd.

Animals can be compared using Selections Index values in the same manner as comparing them using EBVs for single traits, but instead of looking at a large number of EBVs (up to 18) the first screening at least, can be on the single index value. You may then fine tune the match with your herd by considering individual EBVs.

Typical production statistics, prices and costs underlie each Index. Each index has subtly different input statistics appropriate to the market end-point, eg. age and weight at sale, marbling etc.

Benefits and costs evaluated include both those for the long-term sustainability

of the cow herd and those for the sale animal from birth to slaughter. Essential compromises between traits such as the flow-on effects of increased growth on birth-weight & cow maintenance are accounted for when calculating indexes.

In pasture phases, feed is assumed to be a limiting factor for part of the year, and that any increase in feed requirement at herd level is a cost. The assumed herd calving rate and level of calving difficulty each reflect a moderate level of concern that these traits not change unfavourably from the selection of new sires.

Animals will have selection indexes reported only if sufficient information has been recorded for them. Specifically, an animal must have:

- performance recorded with BREEDPLAN or progeny with performance recorded
- one of the birth EBVs (B.Wt, CED) with an accuracy of 40% or higher
- one of the growth EBVs (200, 400, 600) with an accuracy of 40% or higher
- one of the scan or carcass EBVs (EMA, IMF, Fat Depth) with an accuracy of 40% or higher
- one of the fertility EBVs (DTC, SS, CEDtrs) with an accuracy of 30% or higher

Selection index values will not be reported for animals that do not meet these criteria.

2021 Poll Hereford Welcome

Welcome to our 29th Annual on Property Bull Sale. Despite some obstacles with COVID and a mice plague, I don't think primary industry has ever looked as prosperous as it does at the moment with low interest rates, all commodities are solid and the rain keeps falling in most areas.

Beef especially at present is exceptionally buoyant, the EYCI at the time of writing this is at an all time high and has hit the phenomenal benchmark of 1000c/kg. Restocking confidence for cattlemen is high at the moment and looks like being the case for a long time to come with a bumper spring just around the corner.

This year along with cataloguing 43 top quality Poll Hereford bulls, we are offering 20 stud females and 2 lots of joined and unjoined commercial heifers.

The bull offering are again finished on oat crops and present in ideal physical condition, they have been vibrio & 7 in 1 vaccinated, tested negative to pestivirus and are all sire verified and tested for any genetic conditions. Importantly for all purchasers they have passed a vigorous semen morphology test, so are all ready for work.

The stud female offering includes 10 cow & calf lots with some very impressive units amongst them, 2 joined Q heifers and 8 attractive unjoined R heifers. All of these

females have been selected from the top half of our herd and would stand out in any stud herd.

The joined commercial heifers are currently running with a genuine low birth weight Poll Hereford bull. The unjoined heifers are ready to be mated.

This year's sale will again be interfaced with Auctions Plus and inspections prior to the sale are most welcome.

The Carlow family look forward to seeing you on sale day.

Mitchell, Caitlin, Kylie, Ashleigh & Randall

Welcome

Welcome to this year's Angus offering. It's a great time to be in the cattle industry at the moment.

This year we have seen unbelievable optimism. Prices for cattle are at an all time high. Fantastic seasons + strong demand + short supply = record prices & extreme confidence.

This year we have 50 Bulls catalogued. The Bulls are good, full of breeding. They've had a good run seasonally for the last 18 months. They have forged ahead on early oats right through till Sale time and show plenty of genetic potential. They reflect the genetics poured into our program, even through the dry times.

Like most operations, our numbers were cut, and the best female lines were retained. These are the bulls from those females.

All our females calve as two year old's. The sibling females to these sale bulls have all now calved, all unassisted and now out to prove their place in the herd.

Again all the bulls have been Genomics tested with a full set of ebv's on display for each lot, with percentage rank to help verify their DNA.

This year again there's some new Sire lines, with first son's offered by some high profile Aussie bloodlines including Karoo Black Pearl, Banquet Nixon, Pathfinder Magnum, Texas No Regrets, Millah Murrah Marlon Brando, Landfall Keystone and Three Milwillah sire's to top it off.

There are 6 yearling bulls at the back of the catalogue. Selected especially for heifer joining. These young bulls had to hit the target of being in the top 30% for calving ease to earn their place in the sale team.

The Recent Bowen Bull Sale was a highlight for our genetics. With sire Kidman Precedence K72 selling 15 sons at the sale, to average over \$20,000, which included the top priced Angus bull selling to \$36,000. The capacity, softness and consistency stood out across his progeny and was a credit to the Peake family for their wonderful achievement and result.

The Angus breed continue to be market leaders across all facets of the beef industry and are leading breed of choice for profit. You often here the phrase, You've got to spend money, to make money. Well I believe there are a lot of bulls in our catalogue worth investing in.

If you require more information about the bulls, please let us know.

Hope to see you Sale day

Randall Carlow

Possible future restrictions due to Covid-19 may affect our normal Sale circumstances.

Prior inspections of bulls are welcome at any time prior to the Sale or you can check out the videos of all bulls on auctionsplus or on our website www.kidmanangus.com.au

Kidman Precedence K72 - 15 sons averaged over \$20 000 including top price of \$36 000 at 2021 Bowen Bull Sale.

Purchaser:..... \$:.....

BEEFCLASS STRUCTURAL ASSESSMENT

How to use:

The Beef Class Structural Assessment System uses a 1-9 scoring system for feet and leg structure:

- A score of 5 is ideal
- 4 and 6 show slight variation from ideal, but this includes most animals. Any animal scoring 4 and 6 would be acceptable in any breeding program
- 3 and 7 shows greater variation, but would be acceptable in most commercial breeding programs, however seedstock producers should be wary
- 2 and 8 are low scoring animals and should be looked at carefully before purchasing

A 1-5 scoring system is used for sheath attachment. For feet and leg assessment, animals need to be on a hard, flat and even surface where animal can move/stand naturally.

Traits:

	Scoring Range	Description
Front Feet Claw Set	1 - 9	1 - open divergent; 5 - good; 9 - extreme scissor claw
Rear Feet Claw Set	1 - 9	1 - open divergent; 5 - good; 9 - extreme scissor claw

Reference: Shape (primarily curl) and evenness of the claw set.

Front Feet Angle	1 - 9	1 - steep (stubbied toe); 5 - good; 9 - shallow heel
Rear Feet Angle	1 - 9	1 - steep (stubbied toe); 5 - good; 9 - shallow heel

Reference: Strength of pastern, depth of heel and length of foot.

Rear Legs Side View	1 - 9	1 - straight (post legged); 5 - good; 9 - sickle hocked
---------------------	-------	---

Reference: Angle measured at the front of the hock.

Rear Leg Hind View	1 - 9	1 - bow legged; 5 - good (parallel) ; 9 - cow hocked
--------------------	-------	--

Reference: Direction of the feet when viewed from the rear.
