Moogenilla Angus

BULL SALE

1pm, Friday 6th August 2021
CWLE Forbes

10km North of Forbes, NSW on the Newell Hwy.

51 Angus Bulls

- HBR & APR registered with the Angus Society of Australia.
- Structure and Temperament Independently Assessed by Jim Green, Beef Excel.
- Breeding Soundness Inspected by Lachlan Valley Vet Clinic, Forbes.
- BVDV (pestivirus) PI tested negative and Pestigard vaccinated * 2.
- 7 in 1 and Vibrio vaccinated * 2, drenched for internal & external parasites.
- Fully Breedplan/TACE recorded herd for 30 years.
- Bred and grown in extensive, commercially focused, grazing systems.

Inspections from 10am, complimentary BBQ lunch & drinks served.

Selling Agent: KMWL & Co, Forbes, Luke Whitty - 0427 524442
Interfaced with Auctions Plus

2% rebate to outside agents by introduction.

Usual auction sale conditions apply.

Bulls sold GST excl; GST will be added to the bid price under hammer.

PLEASE BRING THIS CATALOGUE WITH YOU TO THE SALE

Moogenilla Angus Bulls

The 'Q' Bulls

- I have spent a lot of time 'changing my mind' about whether to retain some of these catalogued bulls in the Moogenilla registered herd. We usually retain a couple to back up the AI program, but this year, in order to give you access to our very best genetics, we are collecting from a few bulls and presenting them all for sale. We have some nice yearlings coming along to back up the AI program, so although we would really value these Q bulls in our herd, we are making them available to you.
- Feature lots include Lot 4, BWFQ165 and Lot 7 BWFQ33. Lot 4 has an absolutely elite set of EBVs and \$ Indexes, including +\$208 for his Heavy Grain Index, (top 1% of breed), in a lovely quiet, big framed, smooth skinned package. We used him as a yearling and will collect to use within the herd again. Lot 7 is a moderate framed HBR bull, with a lovely softness and outstanding set of EBVs, including +\$160 for his Angus Breeding Index, top 2% of Breed. We will also collect and use him in the Moogenilla herd. I'm sure many other bulls will also suit your program. We will also collect from Lot 9, BWFQ35, due to his high indexes, lovely carcase and faultless structure.
- All bulls are independently assessed by Jim Green for temperament and structure, with the scores presented in each lot description. We are working hard to only select AI sires with exceptional temperament and structure; it is the first criteria a bull must meet before looking at his other EBVs. More accurate information is becoming available on AI sires with time, improving our decisions every year.

Herd Health

- Every bull presented is independently vet checked and guaranteed for soundness and fertility. This includes extrusion and inspection of the penis, prepuce and testicular palpation.
- All bulls at auction are tested negative for PI pestivirus. In over 10 years of testing Sale bulls we have never identified a persistently infected (PI) animal. We also undertook a random sample of blood tests from young animals a few years ago, and they were all naïve to pestivirus – indicating it is not present in the Moogenilla herd. Sale bulls are vaccinated twice with Pestiguard to protect them from contracting pestivirus when they go out to work in other herds –

we recommend an annual booster. (Our females are also vaccinated).

- All Sale bulls are vaccinated twice with Vibrio vaccine and three times with 7 in 1. Annual boosters are recommended.
- The bulls were last 'backlined' for internal and external parasites in May 2021.

Bull Value

- Our goal is to provide world class Angus genetics to commercial producers at viable prices. We know that YOUR profitability is the key to ours. With the use of Artificial Insemination across the Moogenilla female herd for 30 years, we have accessed a full range of genetic advantage. We work hard to select sound, functional, docile and high \$ Index (translate as profitable) AI sires to breed from.
- The Moogenilla bulls have sold at around the NSW average auction prices for the past 11 years. We aim provide a choice of exceptional breed leading genetics, raised in a western NSW commercial environment.

Guarantee

- Moogenilla Angus guarantees the structural integrity and fertility of all bulls in the sale. If a bull is infertile or breaks down in the next 12 months, for reasons other than injury, infection or disease contracted since leaving Moogenilla Angus; the bull will be replaced, or purchase price less salvage value refunded, or a credit issued. Your satisfaction is important to us and we will respond quickly and co-operatively if any problem arises. **Please phone us to discuss any concerns at all!**
- We recommend you insure the animal against injury before transportation from the sale.

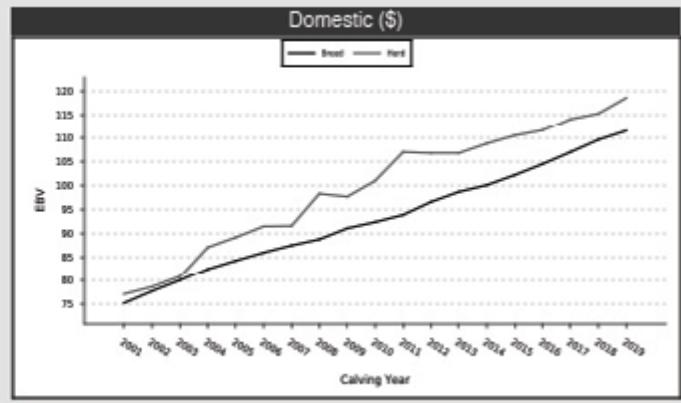

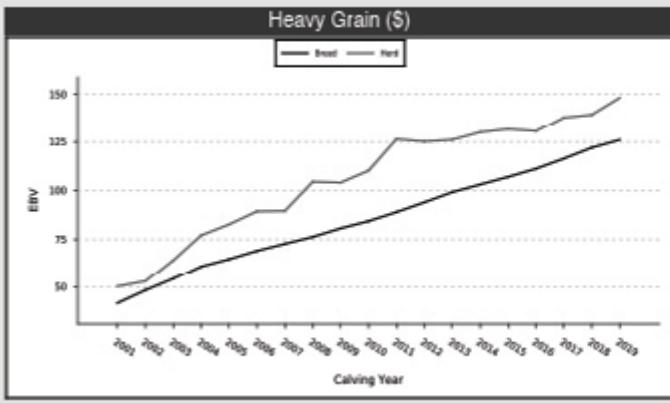

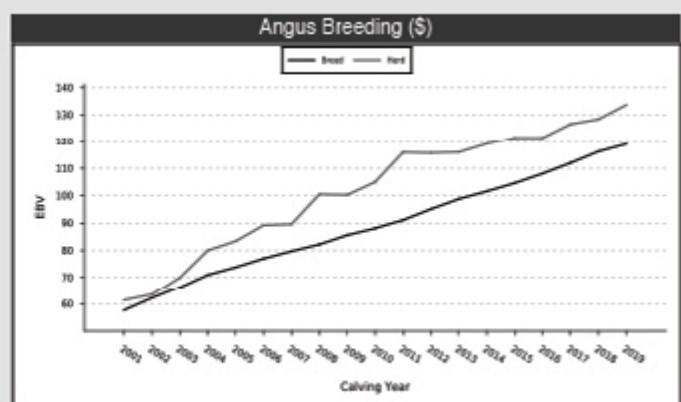

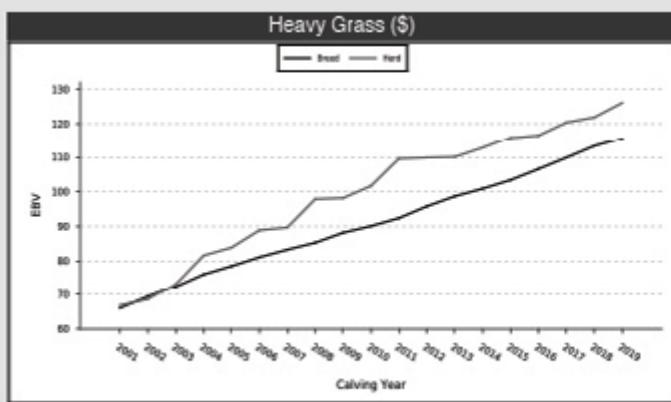

Managing Your New Bull

- Please be aware these young bulls have been run in a large group, in large paddocks, all their lives. Treat them with respect when they are separated from their peers. Ensure you settle a bull in with other cattle, being alone is stressful for herd animals. A bull is most likely to develop a condition or injury that causes infertility AFTER the joining period has started. Observe your new bull and observe your females for excessive cycling activity towards the end of joining.

Moogenilla Angus Herd Selection Indexes Compared With Breed

- For 30 years, we have been picking up every calf on its first day of life, recording its weight and dam tag. This is followed by scans and more weights being submitted to Angus Australia, and tail hairs sent in for DNA tests, to bring you the best genetics we can. We work hard to breed robust, functional and profitable Angus cattle by using herd recording and artificial insemination and by breeding them in a commercially focused dryland mixed farming business in Western NSW. AI sire selection is evolving, and more information on structure and docility is becoming available, so by combining this with the strong data already available on calving ease, growth and carcass attributes, we can make better choices every year.
- The graphs below, provided to us by Angus Australia every year, are a part of a detailed TACE Report which helps us keep track of where we are heading within the Australian Angus Herd. The Indexes graphed below give a 'snapshot' of the profitability of an animal, so comparisons between animals can be made quickly before further inspecting individual EBVs. For example; an Angus Breeding Index of +\$130 is estimated to be \$10 more profitable, per cow joined per year, than an Index of +\$120 in a typical self replacing herd.
- No matter which market you are targeting your animals towards, the Moogenilla genetics are going to be suitable. Keeping all four \$ Indexes well above the Breed Average (as shown in the 4 graphs below) ensures we are breeding animals to suit a range of target markets. This versatility helps when seasons or markets change and you need to place cattle into a range of different markets – turning them off earlier or later than planned.

June 2021 TACE Benchmarking of Moogenilla Herd Compared with Breed Genetic Trends

UNDERSTANDING THE TRANSTASMAN ANGUS CATTLE EVALUATION (TACE)

TACE 

TransTasman Angus Cattle Evaluation

What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation (TACE) is the genetic evaluation program adopted by Angus Australia for Angus and Angus infused beef cattle. TACE uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

TACE includes pedigree, performance and genomic information from the Angus Australia and New Zealand Angus Association databases to evaluate the genetics of animals across Australia and New Zealand.

TACE analyses are conducted by the Agricultural Business Research Institute (ABRI), using beef genetic evaluation software developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals in Australia and New Zealand.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes.

For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVs)

Birth	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	CEDtrs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
Growth	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
Fertility	DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
Carcass	CWT	kg	Genetic differences between animals in hot standard carcass weight at 750 days of age.	Higher EBVs indicate heavier carcass weight.
	EMA	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
	RBY	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.
Other	NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
Structure	Feet Angle	%	Genetic differences between animals in desirable front feet angle (strength of pastern, depth of heel).	Higher EBVs indicate more desirable structure.
	Feet Claw Set	%	Genetic differences between animals in desirable front feet claw set structure (shape and evenness of claw).	Higher EBVs indicate more desirable structure.
	Feet Angle	%	Genetic differences between animals in desirable rear feet angle (strength of pastern, depth of heel).	Higher EBVs indicate more desirable structure.
	Leg Hind View	%	Genetic differences between animals in desirable rear leg structure when viewed from behind.	Higher EBVs indicate more desirable structure.
	Leg Side View	%	Genetic differences between animals in desirable rear leg structure when viewed from the side.	Higher EBVs indicate more desirable structure.
Selection Index	ABI	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems.	Higher selection index values indicate greater profitability.
	DOM	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade.	Higher selection index values indicate greater profitability.
	HGRN	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 200 day feedlot finishing period for the grain fed high quality, highly marbled markets.	Higher selection index values indicate greater profitability.
	HGRS	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers.	Higher selection index values indicate greater profitability.

Beef Class Structural Assessment System

How to use:

The Beef Class Structural Assessment System uses a 1-9 scoring system for feet and leg structure:

- A score of 5 is ideal
- 4 and 6 show slight variation from ideal, but this includes most animals. Any animal scoring 4 and 6 would be acceptable in any breeding program
- 3 and 7 shows greater variation, but would be acceptable in most commercial breeding programs, however seedstock producers should be wary
- 2 and 8 are low scoring animals and should be looked at carefully before purchasing

A 1-5 scoring system is used for sheath attachment. For feet and leg assessment, animals need to be on a hard, flat and even surface where animal can move/stand naturally.

Traits:

	Scoring Range	Description
Front Feet Claw Set	1 - 9	1 - open divergent; 5 - good; 9 - extreme scissor claw
Rear Feet Claw Set	1 - 9	1 - open divergent; 5 - good; 9 - extreme scissor claw

1 2 3 4 5 6 7 8 9

Reference: Shape (primarily curl) and evenness of the claw set.

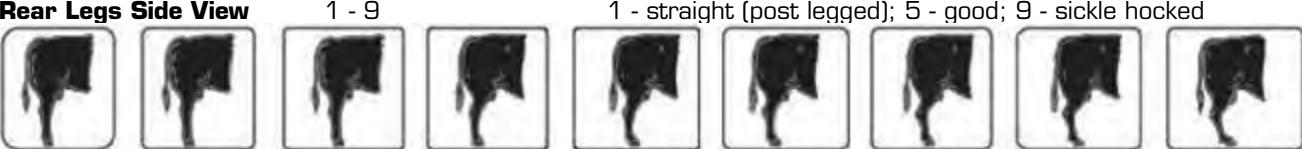

Front Feet Angle	1 - 9	1 - steep (stubbled toe); 5 - good; 9 - shallow heel
Rear Feet Angle	1 - 9	1 - steep (stubbled toe); 5 - good; 9 - shallow heel

1 2 3 4 5 6 7 8 9

Reference: Strength of pastern, depth of heel and length of foot.

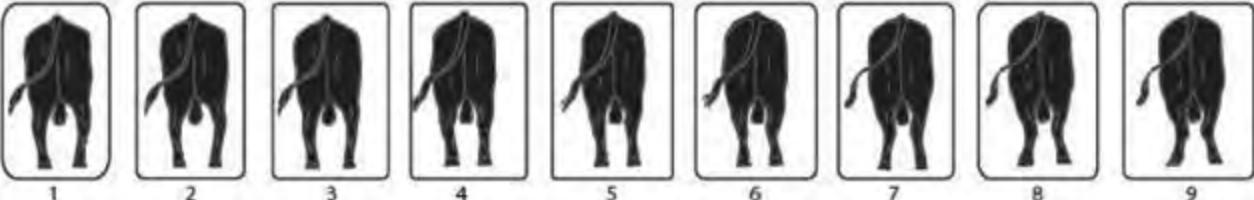

Rear Legs Side View	1 - 9	1 - straight (post legged); 5 - good; 9 - sickle hocked

1 2 3 4 5 6 7 8 9

Reference: Angle measured at the front of the hock.

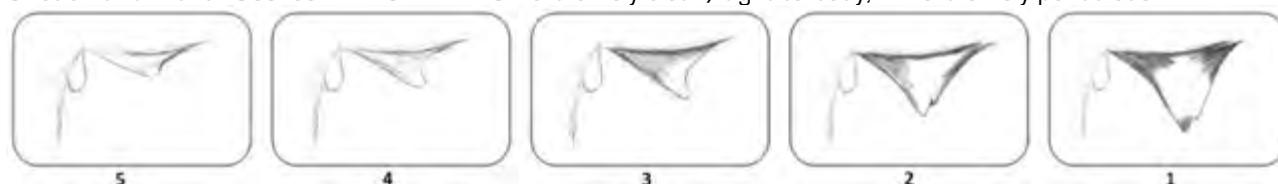

Rear Leg Hind View	1 - 9	1 - bow legged; 5 - good (parallel); 9 - cow hocked

1 2 3 4 5 6 7 8 9

Reference: Direction of the feet when viewed from the rear.

Sheath and Naval Scores 5 - 1 5 - extremely clean/tight to body; 1 - extremely pendulous

Reference: Sheath attachment

Temperament

Reference: 1-5 (half scores permitted) using yard test scale below:

1. **Docile** The animal is easily held in the corner and the handler can get close enough to put their stick on the animal.
2. **Restless** The animal can be held in the corner but exhibits some restlessness and flicking of the tail. The handler cannot get close enough to put their stick on the animal before it moves away.

3. **Nervous** The animal is not easily held in the corner even when the handler is some distance back from the animal, continual movement and tail flicking.
4. **Flighty [wild]** The animal cannot be held in the corner, frantically runs the fence line and may jump when penned individually, exhibits long flight distance.
5. **Aggressive** Similar behavior to score 4 but is also aggressive towards the handler, stares at the handler and threatens to charge or charges (Handler is advised to exit the yard before the animal actually charges).

DISCLAIMER AND PRIVACY INFORMATION

Attention Buyer

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

Parent Verification Suffixes

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA.

SV : the sire has been verified by DNA.

DV : the dam has been verified by DNA.

: DNA verification has not been conducted.

E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

Privacy Information

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

BUYERS OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO ANGUS AUSTRALIA

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its database and disclosing that information to its members on its website.

I, the buyer of animals with the following idents.....

.....
from member.....(name) do not consent to Angus Australia using my name, address and phone number for the purposes of effecting a change of registration of the animals I have mentioned above that I have purchased, maintaining its database and disclosing that information to its members on its website.

Name: Signature:

Date:

Please forward this completed consent form to Angus Australia, 86 Glen Innes Road, Armidale NSW 2350.

If you have any questions or queries regarding any of the above, please contact Angus Australia on (02) 6773 4600 or email office@angusaustralia.com.au
