This evaluation is an assesment of the aspects of a bull's fertility at the time of examination. It is an important part of ensuring certain aspects of a bull's performance have been assessed. It should not be used as a pre-purchase examination or be seen as a guarantee that a bull will produce a specified result over a certain time. Physical injury, disease and nutrition subsequent to this evaluation can impact on an animal's subsequent fertility. The opinion expressed is based on the fertility components evaluated. The evaluating veterinarian has not been involved in any vaccination administrations that have been or may be administered to this animal in the future. No person or corporation has an authority to make use of or to rely upon any or all of this report.

This evaluation is an assesment of the aspects of a bull's fertility at the time of examination. It is an important part of ensuring certain aspects of a bull's performance have been assessed. It should not be used as a pre-purchase examination or be seen as a guarantee that a bull will produce a specified result over a certain time. Physical injury, disease and nutrition subsequent to this evaluation can impact on an animal's subsequent fertility. The opinion expressed is based on the fertility components evaluated. The evaluating veterinarian has not been involved in any vaccination administrations that have been or may be administered to this animal in the future. No person or corporation has an authority to make use of or to rely upon any or all of this report.

Queensland Veterinary surgeons Registration Number 1031

This evaluation is an assesment of the aspects of a bull's fertility at the time of examination. It is an important part of ensuring certain aspects of a bull's performance have been assessed. It should not be used as a pre-purchase examination or be seen as a guarantee that a bull will produce a specified result over a certain time. Physical injury, disease and nutrition subsequent to this evaluation can impact on an animal's subsequent fertility. The opinion expressed is based on the fertility components evaluated. The evaluating veterinarian has not been involved in any vaccination administrations that have been or may be administered to this animal in the future. No person or corporation has an authority to make use of or to rely upon any or all of this report.
