On the 18/8/21, I collected and evaluated the semen from 31 Poll Hereford Bulls for the Te Angie Poll Hereford Stud at Te Angie, Wongwibinda.

All samples had forward motility of 60% or greater. No abnormalities were found with the internal reproductive organs and all penises were visualised. The bulls should be fertile and sound for the purposes of breeding.

Yours sincerely,

Craig Bailey BVSc. N5838
