POLL DORSET

Wunnamurra Rams Breed Better Lambs

Welcome to the 19th Wunnamurra Poll Dorset Ram Sale

Thursday 16th September, 190 Rams, **12 noon Auction**

Two years on and COVID is still a challenge! We are proceeding with the physical on-property sale as normal and will also have the sale interfaced with AuctionsPlus. This means that people who cannot attend are able to bid online, in real time in conjunction with those physically present at the sale. If anyone has questions or intends to bid online please contact Andrew. Those attending on the day will need to follow COVID rules including social distance, masks, signing in and hand sanitising. In order to minimise any risk to attendees we ask that you please do not attend the sale if you have been in a hot spot in the last 2 weeks, have flu like symptoms, or have been in contact with a confirmed/suspected case of COVID-19. **We will deliver rams interstate if required.**

We will have the rams penned early with inspections occurring from **9am**. Please arrive early to ensure you have enough time to look through the rams, keeping in mind this may take you substantially longer than in the past due to social distancing rules and limited space between pens. Please note the new **auction time 12 noon**.

The final thing we would like to mention is that **we sold all of our rams by late September** last year and some clients were unable to acquire the ram quantities they needed. We would ask you to go through your ram team now to ascertain your needs for this year, and to plan early to ensure you get what you want on sale day.

We now market rams over a very wide area, from Kyalite to Morundah, Junee, Holbrook, Moama, Longwood and even down as far as Leongatha and Winchelsea, and also our local area, Jerilderie to Deniliquin.

The sale rams exhibit our breeding aims of big, long, bold, clean headed rams, displaying early growth suitable for joining to Border Leicester Merino cross ewes or large framed Riverina Merino ewes to produce quick maturing lambs for the Trade or Export markets.

All Stud lambs are weighed at birth and at weaning. At 6 months all lambs are weighed and scanned for fat depth and eye muscle depth. From these measurements ASBVs, or (Australian Sheep Breeding Value) are allocated to each lamb.

Catalogues with ASBV information will be **emailed out**, available on our website, and available on sale day. If you don't receive email, or have questions about Lambplan, please contact us.

All rams have been drenched with Zolvix Plus, backlined with Avenge and vaccinated with 6 in 1 in August. For your protection our sheep are guaranteed free of Footrot and Lice, and we are certified Ovine Brucellosis Free. We have been vaccinating against Ovine Johnes Disease with Gudair for over 20 years. Wunnamurra is also in the **Riverina Sheep Biosecurity Area**.

On behalf of Andrew, Judy and Annabel we welcome you to inspect our Rams on sale day and thank you for your ongoing support. Outside agents welcome 3% rebate.

The sale is being held in conjunction with Elders Jerilderie and Landmark Mills, with lunch provided after the conclusion of the auction. Wunnamurra is located 10km south of Jerilderie.

**For more information, contact Andrew Gillett on
0429 660 584 or go to www.wunnamurra.com.au.**

Knowing your ASBVs

Rams with lower ASBVs for birth weight (BWT) produce lambs with lower birth weight. If joining to merino ewes aim for 0.45 or less to minimise birthing issues. Larger frame crossbred ewes are able to handle higher birth weight ASBVs. Very high birth weights should be avoided.

Rams with more positive ASBVs for post weaning weight (PWT) produce lambs that grow quicker and reach target weights in a shorter time. This ram will produce lambs that are, on average, 3kg heavier at post weaning age (7.5 months) than a ram with an ASBV of 0.

The eating quality index is targeted at terminal producers interested in improving the meat eating quality of their prime lambs. The EQ index is based on the same production targets as TCP with the added extra emphasis on eating quality traits including Intramuscular fat (IMF) and Shear force (SF5).

Trait	BWT (kg)	WWT (kg)	PWT (kg)	PFAT (mm)	PEMD (mm)	EQ INDEX	TCP INDEX
ASBV	0.3	4	6.0	-1.5	1.0	130	150
Acc	43	63	71	59	69		

Rams with a more positive ASBV for weaning weight (WWT) will, on average, produce lambs that grow quicker to weaning. This ram will produce lambs that are 2kg heavier than a ram with a 0 ASBV for WWT.

Rams with a more negative ASBV for post weaning fat (PFAT) will produce lambs that are leaner, at the same weight. This ram will produce lambs that are, on average, 0.75mm leaner at the GR site when compared to a ram with a FAT ASBV of 0.

Rams with more positive ASBVs for post weaning eye muscle depth (PEMD) produce lambs that have more muscle, independent of weight, and a higher lean meat yield. This ram will produce lambs that have, on average, a 0.5mm deeper eye muscle than a ram with a 0 EMD ASBV.

The TCP index is a replacement for Carcase Plus and assists in identifying animals with high growth and muscle, while reducing carcase fat. This contributes to higher lean meat yield (LMY). TCP aims to maintain eating quality by having a small emphasis on Intramuscular fat (IMF) and Shear force (SF5).

Meeting the Future Market

DEXA, Lean Meat Yield, Intra-Muscular Fat, and eating quality are all headlines that have been in the media recently, but what does it all mean for you?

DEXA or Dual Energy X-Ray Absorptiometry machines and MEQ probes are being installed at a number of processing plants and with this comes the ability to measure Lean Meat Yield, Intra Muscular Fat and weight of individual carcasses in real time on the processing chain. Currently these machines are being used by robotic cutters to accurately breakdown carcasses into primals for further breakdown for retail. As the technology improves and becomes more widespread, these DEXA machines will be used to analyse a carcass and estimate the weight of individual cuts before the carcass is broken down. It will also be able to measure LMY and IMF of carcasses which is a key determinant of lamb eating quality as well as processing efficiency and value of carcasses. The idea is that in the future, pricing grids for over the hooks will have premiums or discounts for LMY and IMF, as eating quality will become a factor in the value of individual cuts and indeed whole carcasses.

About 6 weeks ago Gundagai Meat Processors became the first abattoir in the world to have a pricing grid that incorporates LMY and IMF with Hot Standard Carcase Weight. Lambs that achieve over 5% IMF receive a premium.

This is very new to the industry and is only available at one processor, so unless you supply Gundagai Meat Processors or have your own paddock to plate branded lamb, it probably isn't essential to select rams based on eating quality traits just yet.

However, we did want to let our clients know that we are selecting for EQ ASBVs in the stud and are using DNA genomic testing to identify elite animals within the stud for EQ so that when the time comes that there is substantial premiums for LMY and IMF we will have the rams available that perform both for fast growth as well as premium eating quality.

If you do wish to select rams based on the Eating Quality traits at the Ram Sale, please contact Andrew to discuss the rams that meet these criteria.

Crossing your Ts with Ram Care

Now is the time to bring your ram team into the yards and assess their soundness prior to joining this year, as well as getting an idea of how many replacement rams you require. Time and effort is well spent caring for rams to ensure their longevity and are in best condition at joining. **Key practices include:**

- 6 in 1 or 5 in 1 vaccine, twice yearly if possible
- Internal parasite drench
- Apply fly treatment on heads to reduce poll strike
- Check teeth, toes and testicles (especially in aged rams)
- Shear at least 6-8 weeks prior to joining to minimise impact on semen quality
- Trim all feet to avoid lameness issues.

Check the condition of the rams. For the most part of the year rams only require maintenance feed to maintain weight and condition, often rams are fed too much for the bulk of the year and can get way too heavy. This can cause lameness and breakdowns. For approx. 8 weeks in the lead up to joining, increase the condition of rams to ensure they are fit and raring to go on day 1 of being with ewes. Also post joining they may need to be built up a bit as rams usually lose weight over the joining period.

Our Sires Top in the Trials

Over the course of 2019 and 2020 we entered four rams into the Bowan Park Poll Dorset Research Flock Progeny Trial. These trials analyse the growth and muscle traits of the progeny of 14 different sires per year across the industry. In addition these lambs are then slaughtered and full testing is conducted on the carcass for eating quality traits, Intra Muscular Fat (IMF), Lean Meat Yield (LMY) and Shear Force (SF).

Our genetics have proven to be extremely successful in both years of the trials. In 2019 we had the **top two lambs for IMF %**, with three lambs in the top six out of 99 lambs. The top lamb from this trial, sired by Wunnamurra 120455, had the highest ever measured IMF % recorded in Australia of 9.75%.

In 2020 we again had the **top IMF % lamb in the trial** at 7.34%, and three in the top 15. Additionally we had the **top two heaviest carcass weights**, with four in the top seven out of 239 lambs. The sires of these lambs were Wunnamurra 170303 and 160298. The W170303 progeny group averaged 52.03kg liveweight at 17 weeks of age, the highest in the trial.

Sires Wunnamurra 120455, 160298 and 170303 all feature progeny in the 2021 ram sale. W120455 is the highest ranked Poll Dorset ram for IMF and highest in the EQ Index in Lambplan. We believe this ram is to be a key sire as we look to improve eating quality traits over the coming years, so our clients can achieve a premium for their lambs in the future as these market opportunities develop.

Ram Sale History

Year	Rams Sold	Average Price	Top Price
2020	174 of 174	\$1545	\$3100
2019	125 of 165	\$961	\$1900
2018	125 of 153	\$1041	\$1900
2017	155 of 155	\$1200	\$2000
2016	132 of 132	\$1401	\$3100
2015	121 of 121	\$1230	\$1800
2014	80 of 80	\$880	\$1300
