

# MOUNT RONAN

WHITE SUFFOLKS & MATERNALS

*Specialising in the breeding of elite quality prime rams*

TWENTY FOURTH ANNUAL  
RAM SALE

Tuesday 28<sup>th</sup> September 2021

On-property at York

Commencing at 1.00pm

Inspections from 11.00am

BBQ lunch and refreshments provided

100 MATERNAL RAMS 100  
80 WHITE SUFFOLK RAMS 80

SPECIALLY SELECTED FLOCK RAMS

ACCREDITED BRUCELLOSIS FREE FLOCK No. OV/AC/044

**A group of 2020 Mount Ronan Spring Sale rams .....  
.....world class profit genetics in an athletic package.**

***"The profitability of our producers' prime lamb enterprises is the key to the future of Mount Ronan."***

# WELCOME TO MOUNT RONAN.....

Sadly the COVID saga continues and future developments are uncertain.

Joanne and I send our best wishes to producers in those states affected by the virus. We have been largely unaffected here in WA, but we know that the situation could change at any time.

We also hope that all visitors and intending purchasers, who log onto our sale on Auctions Plus, have an enjoyable experience.

I started this breeding program 53 years ago. I am now more convinced than ever that the search for outstanding high-production females has yielded wonderful commercial performance in the Mount Ronan sheep genotype. We are convinced that these rams will uphold the Mount Ronan tradition of resilience, robustness, and outstanding prime lamb production performance.

**For more than half a century, we have been actively searching for tough sheep which produce wonderful results over a long lifetime. We are really pleased with the quality of this ram offering and expect they will enjoy a long and productive working life.**

Sale rams were trail fed with pellets in a daily basis from weaning in mid-October. Once the season broke, they have been grown out on pasture only.

As usual, all the rams have been vaccinated with Gudair, Glanvac B12 6 in 1, and Scabiguard. They are guaranteed to be free of lice and the flock is accredited free of brucellosis (OVAC flock 44).

Wool samples were taken from the Maternal rams for testing on the 26<sup>th</sup> August. The spinning fineness tests for most of the rams was at least a micron less than the spring figures shown in the catalogue.

We have been in contact with our trucking contractor, who assures us that the inter-state transport of rams is proceeding without difficulty. Intending purchasers from the eastern states can purchase rams with confidence, knowing that they will be delivered safely after the sale. A truck will be heading over east towards the end of October.

Joanne and I hope that you successfully purchase your ram preferences, and we will follow up with after-sales service, as usual. Good luck.

Young spring sale rams, keen to go to work

## Signing up with AuctionsPlus - [www.auctionsplus.com.au](http://www.auctionsplus.com.au)

**Please register 24 to 48 hours before the start of the sale.**

1. Go to the home page and click 'sign up'

2. Fill out the required information to create an account. A confirmation email will be sent to your email inbox, which will need to be actioned.
3. Once you have created an account and confirmed your email, you then need to upgrade to a buyer on the system
  - a. Once logged in go to your dashboard
  - b. From your dashboard click on the green button "request approval to buy"
  - c. Enter your details, like PIC, Trading Name & Property Address
  - d. Complete the buyer training – this can take up to 30 mins

4. Once your buyer training has been completed, the AuctionsPlus office will be notified and will approve your request.
5. An email will be sent to you once it has all been approved.

# AuctionsPlus Sequential Online Only Sale – How to guide:

[www.auctionsplus.com.au](http://www.auctionsplus.com.au)

First and foremost in order to bid in any AuctionsPlus livestock sale buyers need to be registered with A+ as a buyer. Follow the steps in the “sign up doc”

The sale will run so that one lot at a time is offered/available for bidding.

The screenshot below indicates the set up of the auction where the lot number is shown next to the ‘bid’ button, followed by photos/videos and lot information on the right hand side.

The screenshot displays the AuctionsPlus interface. At the top, a table shows the status of previous lots: Pen 505, 506, 509, and 510, all sold to the buyer at various prices. Below this, a 'FINISHED' banner is visible. The main section is titled 'Now Selling Pen 511' with an increment of \$5.00/Head. A large blue button labeled 'click to start \$250.00' is present, along with an 'unlock' button. To the right, there are options for 'Or Enter Auto Bid' with 'Autobid' and 'Apply' buttons. Below the main lot details, a 'NEXT UP' section lists upcoming lots: Pen 512 (\$240.00), Pen 513 (\$250.00), and Pen 516 (\$240.00). Each lot has a bid button and an 'Auto Bid' option. On the right side, there are photos of sheep and an 'Assessment' section with details like '104 NSM Ewes', '100% Border Leicester/Merino', 'Live wt AVG: 64.3 | RANGE: 60 - 69', 'Dressed wt 27.6', 'Sex Ewe', 'Maj Fat 5 (40%)', and 'Age 17 to 18'.

As there is no auctioneer to determine when each lot will finish, a 60 second timer will be utilised.

Every time a bid is placed on the lot, a 60 second timer will start again keeping the lot open.

In the last 10 seconds of that timer a “Going” message will appear to indicate the lot is about to be sold.

The bid button will be green and “your bid” will be displayed if you are holding the lot

## **Insurance Disclaimer**

### **Stud Animals are not covered by commercial livestock insurance.**

Insurance risk of stud animals sold at auction transfers to the purchaser at the fall of the hammer, including animals remaining on the vendor's property.

Purchasers therefore are advised to insure their animals at the completion of the sale.

### **Please note:**

Mount Ronan stipulates that all rams which are to be registered and transferred into stud flocks will require a total payment of \$3000 (excluding GST).

If rams are purchased at the auction for less than \$3000 and the buyer wishes to have the rams transferred and registered for stud use, then the purchaser will be required to make up the difference between the purchased price and \$3000 (plus GST) before the transfer and registration can take place.

### **Semen marketing rights & collection:**

Mount Ronan reserves the right to collect semen for our own use from any rams offered in the catalogue. Collection will be at Mount Ronan's expense and at the convenience of the purchaser.

Mount Ronan retains exclusive semen marketing rights for all rams offered in the catalogue.

**The accuracies of the ASBVs are extremely high because Mount Ronan has measured so many sheep on LAMBPLAN .....and**

**It is the wonderful balance between growth and muscling, and the outstanding resilience of the Mount Ronan sheep genotype which sets them apart from the rest.**

Ewes and lambs, September 2021.

# **MOUNT RONAN GENETICS.....**

## **.....DRIVING PROFIT!!!!**

*"We like the Mount Ronan sheep. They are everything we are chasing. The thing I like the most is their carcass type. Despite the fact that a lot of work has been put into their maternal characteristics they still have very good carcass attributes.*

*The ewes produce very uniform lines of lambs with very well-muscled carcasses which yield really well. Their fat scores just seem to drop into the grid wherever you put them.*

*We turn off top-end supermarket lambs in the 2-3 scores. We take them out to heavy export weights around 32 kilos and they are mostly 3-4 scores.*

*After more than 50 years of selection for resilience at Mount Ronan the ewes have the ability to "do" in tough conditions and keep bouncing back. That strong constitution is what you get in the Mount Ronan sheep.*

*Last year our mature ewes scanned 191 percent across the flock after three years of drought, and this year they scanned 207 per cent for all ewes including hoggets. They are wonderful, functional mothers and lamb survival is outstanding."*

**Andrew Hunter, Hills Park, Yerong Creek, NSW.**

Andrew Hunter and son Royce, with champion sheep dog, Bruiser.

*"Mount Ronan White Suffolks and Maternals are wonderful sheep. If you are looking for "bang for buck" and wanting maximum kilograms of lamb per hectare, then don't bother looking anywhere else."*

**Justy Fleay, Redgum Hills, Kojonup, WA.**

*"I think a massive advantage of these Maternals is their mothering ability. I see them physically counting their lambs, they are great milkers and they stamp their hooves at the dogs. The lambs have wonderful doing ability and are quicker maturing.*

*One of the main advantages is when I sell export lambs they are not bubbling with fat.*

*They make your mouth water just looking at them. They are very heavy but their leanness is very good."*

**Owen Blake, Tandari Pastoral, Harefield, NSW.**

Cameron Male, with his son Andrew.

*"We found it hard to buy first cross ewes we liked without paying too much for them, so that's why we switched over to the Maternals.*

*We went to Mount Ronan in WA because of their reputation. The rams are easy doing and have longevity and produce unbelievable mothers. They are just so protective of their newborns.*

*The lambs are very easy doing and their growth rates are phenomenal.*

*We buy the rams online through Auctions Plus. We know what we are getting using ASBVs and we haven't been disappointed yet.*

*It's a really simple process and no drama at all getting them trucked over here."*

**Cameron Male, Dalrye, Yerong Creek, NSW.**

# **ASBV PERCENTILES**

Use the following percentile band tables to work out where an individual ram sits relative to the 2020 drop cohort for all sheep measured in Australia in that dataset across a range of traits.

Percentile band table data is adapted from the *Sheep Genetics* website.  
Analysis date 15 August 2021.

## Understanding LAMBPLAN Maternal ASBVs

Rams with a more positive weaning weight (WWT) will, on average, produce lambs that grow quicker to weaning. This ram will produce lambs that are, on average, 0.4kg heavier than a ram with a 0 ASBV for WWT.

Rams with more positive ASBVs for post weaning weight (PWT) produce lambs that grow quicker and reach target weights in a shorter time. This ram will produce lambs that are, on average, 1.25kg heavier than a ram with a 0 ASBV for PWT.

Rams with more positive ASBVs for eye muscle depth (EMD) produce lambs that have a higher lean meat yield. This ram will produce lambs that have a 0.2mm deeper eye muscle than a ram with a 0 EMD ASBV.

Rams with a higher clean fleece weight (CFW) ASBV will produce progeny that cut more wool. This ram will produce progeny that, on average, cut 2.5% more wool than a ram with an ASBV of 0.

Worm egg count (WEC) ASBVs estimate an animal's genetic potential for resisting worm burdens. Lower WEC ASBVs are desirable. This ram will, on average, sire progeny that have 10% fewer eggs/gram than a ram with an ASBV of 0.

Trait	WWT (kg)	MWT (kg)	PWT (kg)	FAT (mm)	EMD (mm)	NLW (%)	CFW (%)	SC (cm)	WEC (%)	INDEX
ASBV	0.8	1.0	2.5	-0.4	0.4	4	5	0.6	-10	105.6
Acc	51	53	61	45	38	33	37	44	37	

Rams with more positive ASBVs for maternal weaning weight (MWT) will produce daughters which will wean heavier lambs. This ASBV reflects a combination of the daughter's ability to milk and provide a better maternal environment.

Rams with a more negative ASBV for fat will produce lambs that are leaner, at the same weight. This ram will produce lambs that are, on average, 0.2mm leaner at the GR site when compared to a ram with a FAT ASBV of 0.

Rams with a more positive number of lambs weaned (NLW) ASBV will sire daughters that wean a higher percentage of lambs. This ram with an ASBV of 4 will sire daughters which, on average, will wean 2% more lambs.

Rams with higher scrotal circumference (SC) ASBVs will sire daughters that are, on average, more fertile.

An index is a guide to the value of a ram for a particular market. Rams with higher indexes will produce lambs that are more suited to that particular breeding objective. In many cases the indexes used for maternal breeds are in \$ terms.

• An ASBV of 0 is the average of the 1990 drop.

• Note: A useful rule of thumb for converting ram ASBVs into lamb production differences is to simply halve the ASBV (as rams contribute half the genetics of the lamb).

• Accuracy - published as a percentage, is a reflection of the amount of effective information that is available to calculate the ASBV. All ASBVs are now published with accuracies. The higher the percentage, the closer the ASBV is to the true breeding value of the animal. Breeding values without accuracies are Flock Breeding Values (FBVs) and can only be compared within the flock.

## **LAMBPLAN'S TRAIT LEADERS**

Many of our White Suffolk and Maternal sale rams are trait leaders. In other words, they are in the top 10% of the LAMBPLAN database for growth, leanness, muscling, or a combination of these traits. They are in the top 10% of all the rams of all terminal and commercial maternal breeds measured in the LAMBPLAN program in 2020 in Australia and New Zealand.

**Trait leaders are noted in the comments for each ram and boxes are shaded to make them more visible.**

## **MATERNAL SIRE REFERENCE**

(With ASBVs as at 1/09/2021)

**PLEASE REMEMBER:** Don't compare Maternal ASBV's with Terminal ASBV's because they are different data sets. Comparisons will be misleading due to the use of different breed runs on LAMBPLAN.

# **MATERNAL SIRE REFERENCE**

(With ASBVs as at 1/09/2021)

## **TRIGGER VALE 180576**

<b>BWT</b>	<b>WWT</b>	<b>AWT</b>	<b>PFAT</b>	<b>PEMD</b>	<b>NLW%</b>	<b>MCP+</b>
<b>0.2</b>	<b>6.7</b>	<b>14.7</b>	<b>0.1</b>	<b>1.7</b>	-	<b>131.2</b>

A specially selected Merino sire, with an early maturity growth pattern, and strong muscling. Mated to specially selected Maternal ewes in an artificial insemination program. ASBVs have been affected by lack of linkage at this early stage, but progeny are impressive from a carcase and wool perspective.

### **Notes:**

Ashmore (SA)  
Gates (NSW)  
Lambpro (NSW)  
Trigger Vale (NSW)

MR = Mount Ronan

SOD = Sire of Dam

Dam MS = Dam Mothering Score

**Shaded ASBV boxes indicate trait leaders – top 20% or better for that trait.**

# Understanding LAMBPLAN ASBVs

Rams with lower ASBVs for birth weight (BWT) produce lambs with lower birth weight. Both low (lamb survival) and high (lambing difficulties) birth weights should be avoided.

Rams with more positive ASBVs for post weaning weight (PWT) produce lambs that grow quicker and reach target weights in a shorter time. This ram will produce lambs that are, on average, 3kg heavier at post weaning age (7.5 months) than a ram with an ASBV of 0.

Worm egg count (WEC) ASBVs estimate an animal's genetic potential for worm burdens. Lower WEC ASBVs are desirable. This ram will, on average, sire progeny that will have 5% fewer eggs/gram than a ram with an ASBV of 0.

Trait	BWT (kg)	WWT (kg)	PWT (kg)	PFAT (mm)	PEMD (mm)	WEC (%)	INDEX
ASBV	0.3	4	6.0	-1.5	1.0	-10	150
Acc	43	63	71	59	69	37	

Rams with a more positive ASBV for weaning weight (WWT) will, on average, produce lambs that grow quicker to weaning. This ram will produce lambs that are 2kg heavier than a ram with a 0 ASBV for WWT.

Rams with a more negative ASBV for post weaning fat (PFAT) will produce lambs that are leaner, at the same weight. This ram will produce lambs that are, on average, 0.75mm leaner at the GR site when compared to a ram with a FAT ASBV of 0.

Rams with more positive ASBVs for post weaning eye muscle depth (PEMD) produce lambs that have more muscle, independent of weight, and a higher lean meat yield. This ram will produce lambs that have, on average, a 0.5mm deeper eye muscle than a ram with a 0 EMD ASBV.

An index is a guide to the value of a ram for a particular market. Rams with higher indexes will produce lambs that are more suited to that particular market target. It is important to understand what market the index applies to before using an index.

- An ASBV of 0 is the average of the 1990 drop. It is important to compare ASBVs against current industry average.
- Note: A useful rule of thumb for converting ram ASBVs into lamb production differences is to simply halve the ASBV (as rams contribute half the genetics of the lamb).
- Accuracy - published as a percentage, is a reflection of the amount of effective information that is available to calculate the ASBV. All ASBVs are now published with accuracies. The higher the percentage, the closer the ASBV is to the true breeding value of the animal. Breeding values without accuracies are Flock Breeding Values (FBVs) and can only be compared within the flock.

## FELIX 151229

BWT	WWT	PFAT	PEMD	IMF	SHRF5	NLW%	TCP	LEQ
0.51	11.5	1.2	2.9	0.09	-4.04	19	159.6	162.0

A highly proven White Suffolk sire, used in the artificial insemination program on selected ewes. Strong growth and muscling, and exceptional daughter fertility and eating quality genetics.

## WOOLUMBOOL 173980

BWT	WWT	PFAT	PEMD	IMF	SHRF5	NLW%	TCP	LEQ
0.40	10.6	0.5	3.3	0.55	-4.72	-2	162.8	173.3

An outstanding White Suffolk son of ELLA MATTA 150097, and grandson of the equally outstanding sire MOUNT RONAN 110583. Used in the artificial insemination program for the 2019 & 2020 lambing. A wonderful balance of high production ASBVs, genes for exceptional worm resistance and outstanding eating quality.

# Extended Bowen Family – “Team Mount Ronan”

Zizzie, a student from Murdoch University, recording rams electronically.

Change of guard at the farm. Boof takes over from his father Reg.

More infrastructure improvement - no more portable toilets!

Liam and Grandson Bailey feeding a pet lamb. The wellington boots were really needed!

A nice photo of Al Lubcke. Taken on our farm visits to the Great Southern in late February.

Granddaughters Madison and Amelia helping sort ram lambs. Lots of red raddle on faces! Also well dressed for the farm.

Renovation of sale shed by Declan.

Fabia, from Switzerland, with Reg. Reg sired Boof, who is proving to be better than his father! That's saying something!!

Erin, from Murdoch University, assisting during 2021 lambing.
