HICKS BEEF BULL SALE

Wednesday 1st September, 2021

**Sale Commences: 1.00pm
Inspections from 10.00am**

Auction in the sale barn with video presentation of each lot. All lots will be penned for your inspection on sale day. We encourage you to call and arrange an inspection prior to sale day.

The Hicks Beef Bull Sale will be conducted under the current COVID-19 protocols.

**62 Australian Beef Composite Bulls
19 Hicks Red Angus Bulls**

AuctionsPlus

This sale is interfaced with AuctionsPlus

Our sale is conducted live on line in real time; remote bidders can bid on computers at their location. The remote bid is immediately transferred to the auction ring.

Bidding is only available to registered AuctionsPlus users

You must register at least 24 hours prior to sale with AuctionsPlus.

Phone: 02 9262 4222 W: www.auctionsplus.com.au

Elders

Phil Gledhill 0407 078 094

Jenni O'Sullivan 0428 222 080

**2% REBATE
to Outside Agents**

We have poor mobile phone reception at our sale ring. Please call Phil from Elders to organise phone bidding.

RED ANGUS GROUP BREEDPLAN

ESTIMATED BREEDING VALUES (EBVs) The EBV is the best estimate of an animal's genetic merit for that trait.

ACCURACY: Accuracy is based on the amount of performance information available on the animal and its close relatives - particularly the number of progeny analysed. The higher the accuracy value the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives. Even though an EBV with a low accuracy may change in the future, it is still the best estimate of an animal's genetic merit for that trait.

Gestation Length EBV (days) is an estimate of the time from conception to the birth of the calf and is based on ASI and hand mating records. Lower (negative) GL EBVs indicate shorter gestation length and therefore easier calving and increased growth after birth.

Birth Weight EBV (kg) is based on the measured birth weight of progeny, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

200-Day Growth EBV (kg) is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight EBV (kg) is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

Scrotal Size EBV (cm) This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

Carcase Weight EBV (kg) is based on abattoir carcase records and is an indicator of the genetic differences in carcase weight at the standard age of 650 days.

Eye Muscle Area EBV (sq cm) This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 300 kg dressed carcase. More positive EBVs indicate better muscling on animals. Sires with relatively higher EMA EBVs are expected to produce better-muscled and higher percentage yielding progeny at the same carcase weight than will sires with lower EMA EBVs.

Rib Fat and Rump Fat EBVs (mm) are calculated from measurements of subcutaneous fat depth at the 12/13th rib site and the P8 rump site and are adjusted to a standard 300 kg carcase. These EBVs are indicators of the genetic differences in fat distribution on a standard 300 kg carcase. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcase weight than will sires with higher EBVs.

Retail Beef Yield EBV (%) indicates genetic differences between animals for retail yield percentage in a standard 300 kg carcase. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

Intramuscular Fat EBV (%) is an estimate of the genetic difference in the percentage of intramuscular fat at the 12/13th rib site in a 300 kg carcase. Depending on market targets, larger more positive values are generally more favourable.

For further information please contact the Red Angus Society or Red Angus BREEDPLAN.

Beef Class Structural Assessment System

Structural problems in cattle have a substantial effect on both the reproductive and growth performance of a beef herd. It is widely recognised that structural problems in sires have detrimental effects on conception rates, calving patterns and thus profitability. Similarly, females with inadequate structural characteristics are more prone to weaning lighter calves or conceiving later in the breeding season than their more functional counterparts. These structural problems are filtered through the supply chain resulting in reduced income for the producer, feedlot and thus reducing the overall productivity of the Australian Beef Industry.

Over the past decade, use of the Beef Class Structural Assessment System in the seedstock industry has produced a marked improvement in herds which have shown commitment to using the information appropriately. Through these dedicated breeders, there has been a flow on affect of structural improvement through out all sectors of the beef cattle industry.

Jim Green and Liam Cardile of 'BEEFXCEL' service many of the leading seedstock herds in Australia. 'BEEFXCEL' is not involved in any genetic marketing or specific breeding advice and therefore has no conflict of interests to influence their stock appraisal. The integrity of the structural data provided by 'BEEFXCEL' is recognised throughout the industry as Jim and Liam are fully INDEPENDENT assessors.

HICKS BEEF STRUCTURAL PROGRAM: Since 2003 Hicks Beef have used the services of BEEFXCEL to assess the structure of all sale bulls. The Spring 2021 Hicks Beef Sale Bulls have been independently structurally assessed to maximise the quality of stock on offer. Any animals deemed inadequate have been removed from the sale draft. The Hicks Beef sale bulls were assessed by **Liam Cardile** of LRC Livestock on 26/05/2021. The composite bulls scrotal circumference measurement was taken on 10/09/2020.

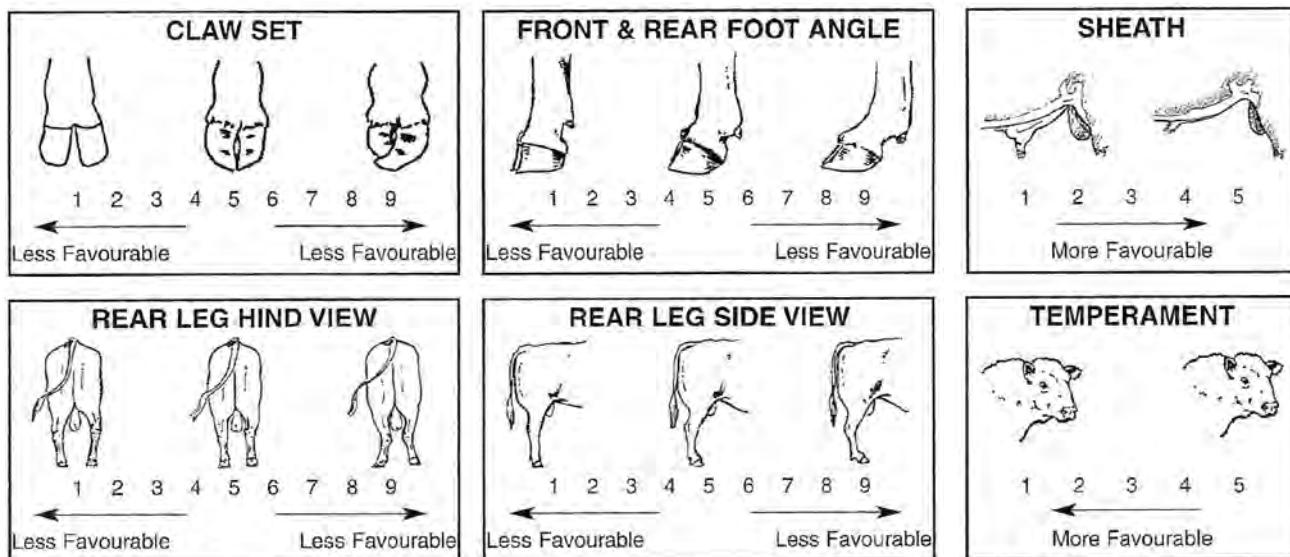

Please note the yearling bulls were assessed and scrotal circumference measurement was taken on 01/07/2021.

How to Use The Beef Class Structural Assessment System

The Beef Class Structural Assessment System uses a 1-9 scoring system:

- A score of **5** is ideal (Note: Except for Temperament where a Score of 1 is ideal);
 - A score of **4 or 6** shows slight variation from ideal, but this indicates most animals. An animal scoring 4 or 6 would be acceptable in any breeding program;
 - A score of **3 or 7** shows greater variation but would be acceptable in most commercial programs.
- However, seedstock producers should be vigilant and understand that this score indicates greater variation from ideal;
- A score of **2 or 8** are low scoring animals and should be looked at closely before purchasing;
 - A score of **1 or 9** should not be catalogued and are considered culls.

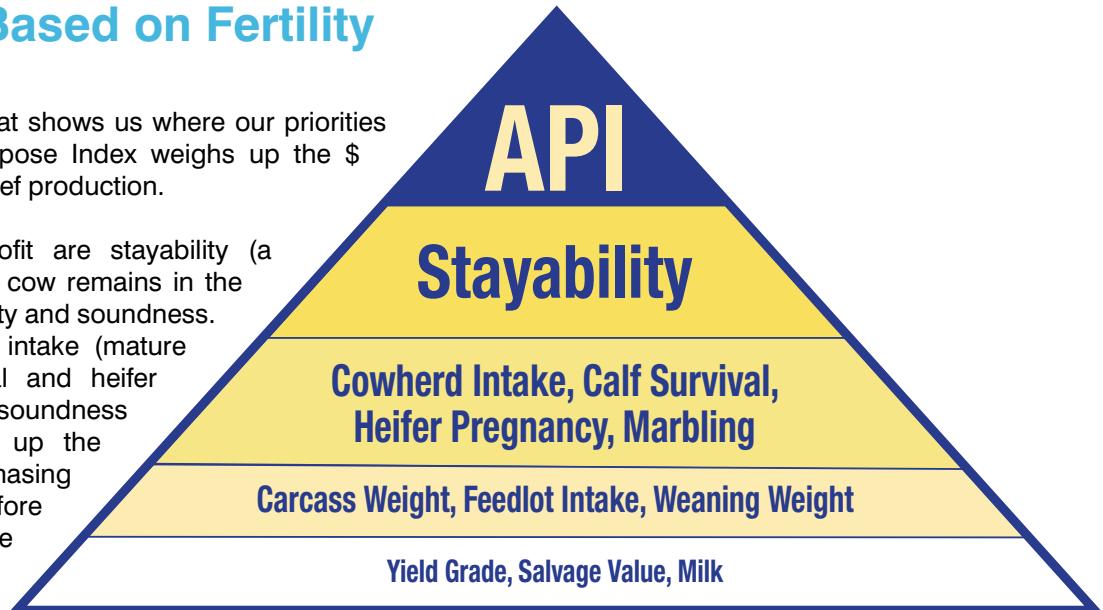

Liam Cardile on 0409 572 570

API – Profit Based on Fertility

API – the profit index that shows us where our priorities should be. The All Purpose Index weighs up the \$ inputs and outputs of beef production.

The big drivers of profit are stayability (a measure of how long a cow remains in the herd) a measure of fertility and soundness. Followed by cow herd intake (mature cow size), calf survival and heifer pregnancy. Yes, fertility, soundness and live calves make up the priority for breeders chasing higher returns, before weaning weight, carcass weight and feedlot intake.

HICKS BEEF GUARANTEE - Nothing left to chance Genomically Enhanced EPDs

- All sale bulls and females are assessed on one of the world's most advanced performance programs in the world with IGS - International Genetic Solutions
- All figures; both dams, sires and individuals are genomically enhanced, with DNA verifying parentage and improving the accuracy of the performance figures.

The DNA test is like knowing

- 15 Calving Ease Scores
- 21 Birth Weight
- 22 Weaning Weights
- 24 Yearling Weights
- 25 Daughters Records for Stayability
- 6 Carcass Weights
- 8 Marbling Scores
- 5 Rib Eye Measurements

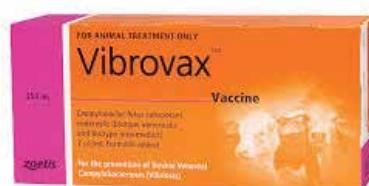

- Independent veterinarian breeding soundness checks by the industry leading Holbrook Veterinary Clinic.
- Independently assessed for structural soundness by Liam Cardile, LRC Livestock, one of Australia's most experienced stock assessors.

- All bulls measured for all traits, birth, weaning, yearling, carcass scanned, temperament.
- All females on Total Herd Enrolment, all measurable traits recorded.
- Producing bulls in optimum condition for their first joining season is our priority. We keep our bulls on a steady plane of nutrition, with a high roughage, silage based ration.
- All bulls vaccinated with Vibrovax, Ultravac 7 in 1 and Pestigard
- All bulls tested free for pestivirus
- Backed by Hicks guarantee

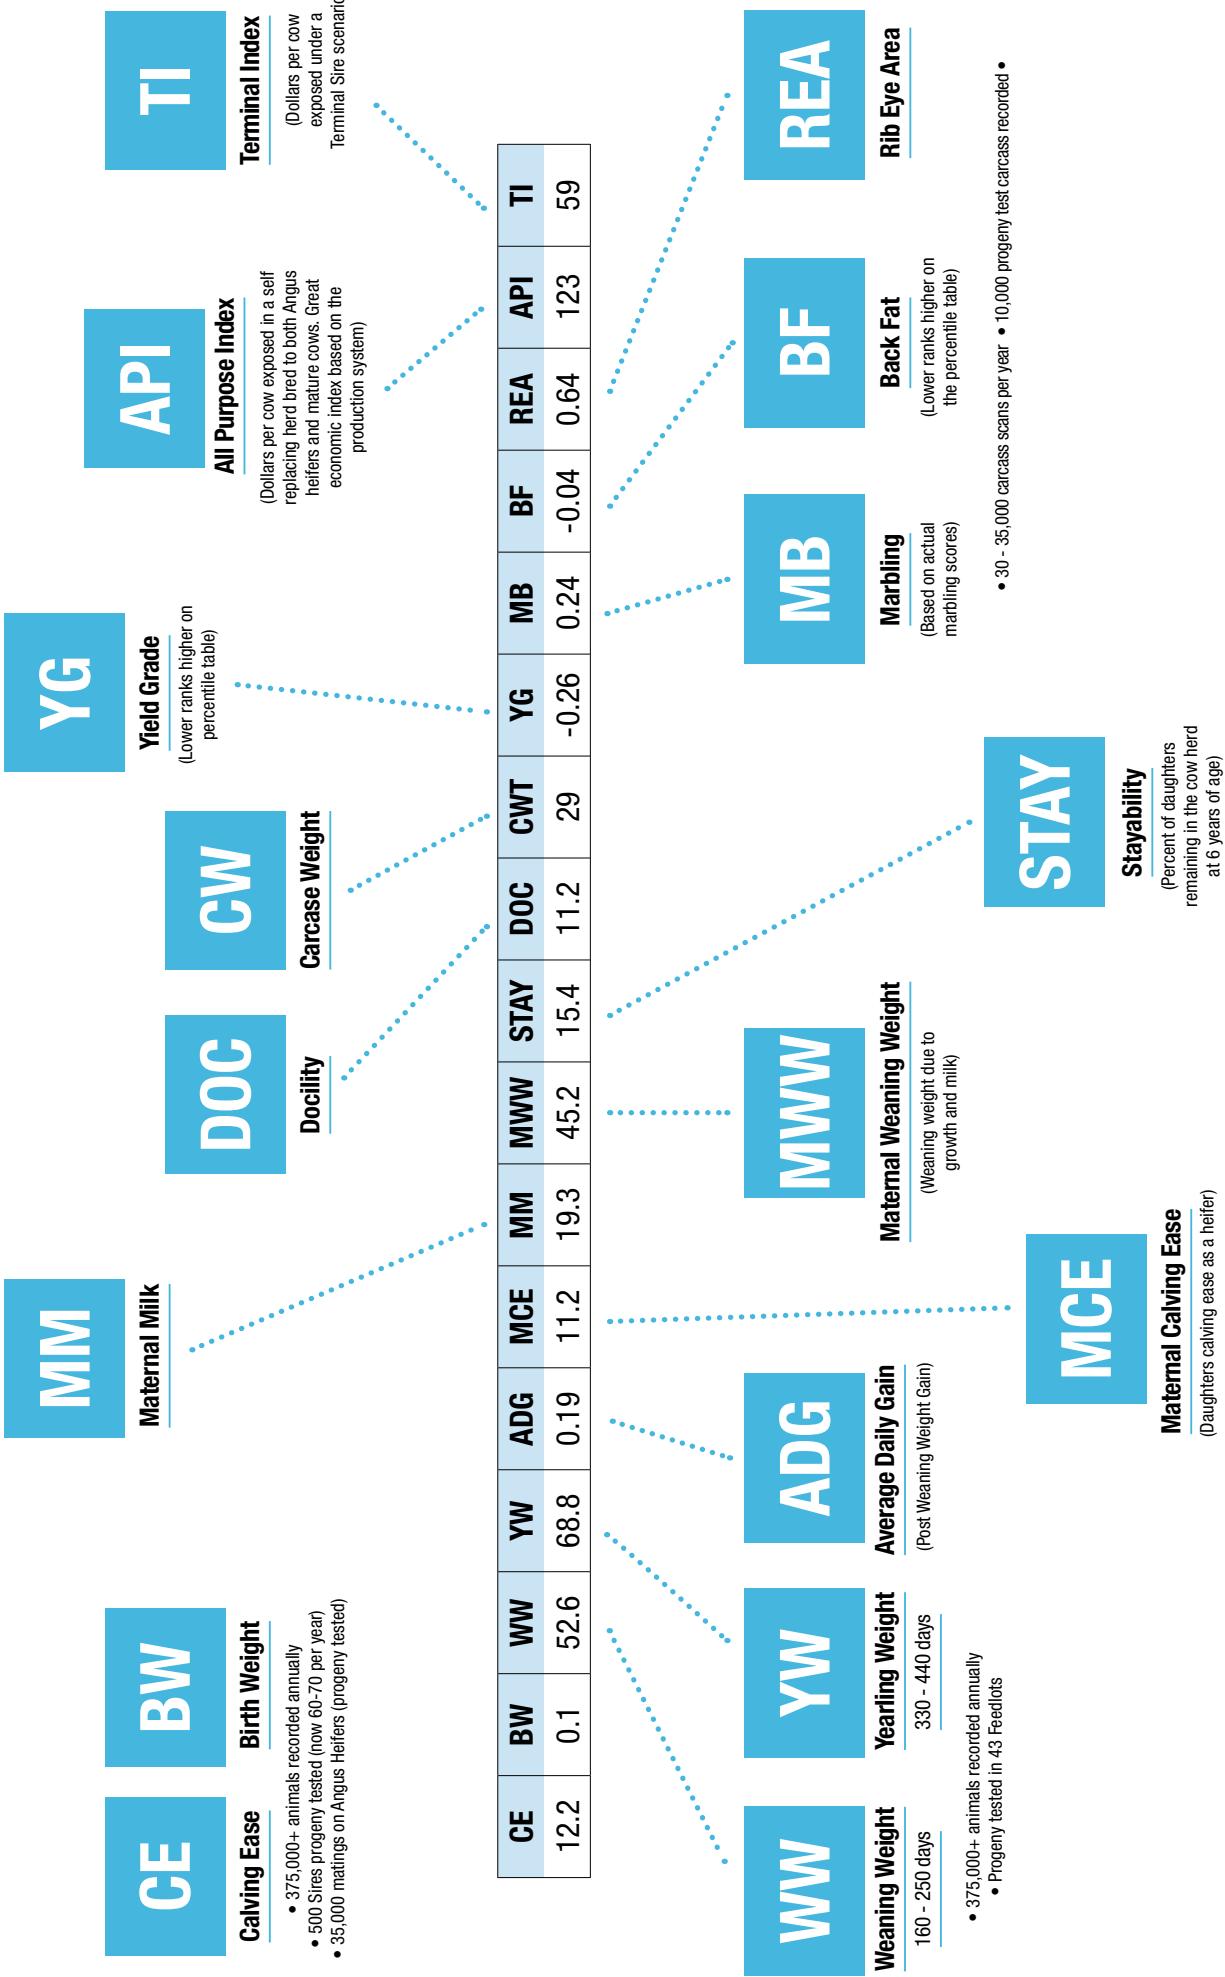

Vet Check Information

All bulls presented in the auction have been fertility tested by the Holbrook Veterinary Clinic. They have passed an examination of their reproductive tract, which includes a testicular palpation, internal reproductive organ palpation and penis check.

General health and structure are part of the course for this veterinary examination. Service ability testing and semen assessment have not been performed and we encourage all purchases to integrate their new bulls into the risk mitigation strategy that they employ back home.

This is a bull with great balanced numbers as reflected in his high All Purpose Index. Should be very suitable to join to heifers.

High marbling and good stayability.

Q897 has not settled in with this group of bulls and seems to prefer a fight to a feed, but we believe he offers great genetic potential with his top 10% API. A Hicks Beef joining sire 2020.

YEARLING BULLS

The offering of 11 black composite yearling bulls in this year's Spring Sale will allow for clients to purchase bulls with the best genetic gain of the herd, whilst maintaining excellent type and soundness. Yearling bulls are an integral part of the Hicks Beef sire list with approximately 20 used each year in our stud and commercial herds.

In order to harness the potential of yearling bulls there are important management requirements:

- Yearling bulls can work alongside other yearling bulls or an older bull in a mob of cows.
- Ensure they have adequate feed and are on a rising plane of nutrition
- We recommend joining one yearling bull to about 30- 35 cows for mating load.
- It critical that condition is monitored over the joining period with a condition score of below 2 beginning to impact reproductive organs.
- It is important to monitor your working bull at least once every 2 days in the first cycle (21 days) and twice weekly thereafter to ensure they are successfully mounting cows, that they look in good condition and they are not lame
- After joining a yearling bull should be placed on good quality feed with plenty of space until the next joining period to ensure a long and fulfilled working life.

We encourage anyone interested in purchasing a yearling bull with questions to contact the Hicks Beef team.

Hicks Beef Bull Checklist

- ✓ Moderate Birth - we aim to have birth weights lighter than breed average
- ✓ Specialist Heifer Bulls - in all our breeds, top 20% calving ease
- ✓ Weight Gains - up in the top 20% of breed for 200 & 400 day weights
- ✓ Mature Weights Less than breed average, large cows need more maintenance
- ✓ Carcase - we believe muscle and yield will be demanded by industry and that marbling is an important trait
- ✓ Temperament - is important, we cull heavily on temperament, sale bulls and cows

HICKS RED PATRICIA K143

BROWN PREMIER X7876

HICKS TOP RECORD N86

HICKS TOP RECORD J26

This bull offers great balanced numbers with a Supermarket Index of \$54 which is top 6%.

His fat puts him in the top 10% which is handy for the grass fed market.

Good rib eye and great marbling.

Excellent temperament.

RED PATRICIA N179

HICKS RED PATRICIA J84

A very good ET calf from one of our great young heifers. The intention of the mating was to produce curve bending progeny with moderate calving ease that will grow quickly with muscle and thickness. Docile. Note these are Mid Parent Value EBVs for Q83, his Group Breedplan EBVs will be available before sale day.

DIRECTIONS

DELIVERY: Stock awaiting delivery will be held free of charge for up to 14 days after the sale at the buyer's risk.

GUARANTEE: We have always provided full replacement guarantee against fertility and genetic faults. It is important that we are contacted as soon as possible to rectify any problem.

FEEDING POLICY: We believe that overfeeding can cause many problems to bulls long and short term. All our cattle are run in large paddocks under commercial cattle conditions. All Breedplan figures are assessed under these conditions usually from mobs of over 100 cows and calves.

As we sell our bulls younger than most studs we feel it is important that they are in suitable condition to withstand the rigours of their first season. The bulls are given a supplementary ration for 10 weeks, out in the paddock still in their calving groups.

All bulls are treated identically with no preferential treatment for the top bulls. We have sold bulls to many areas of Australia and have had no complaints about their mobility or fertility.

Terms and Conditions of Sale

1. Subject to reserve prices, the highest bidder shall be the purchaser, and in the event of any dispute arising it shall be settled by the Auctioneer, unless one of the claimants will advance the bidding above the disputed bid, in which case the lot or lots shall be put up again.
2. The purchaser shall deposit the whole or any part of the purchase money if required at any time during the sale.
3. All stock shall be paid for in cash immediately on conclusion of sale, and prior to delivery, but, in the event of delivery being made, or possession obtained by the purchaser or his representative prior to the payment of the purchase money, or any cheque given on account of same, the purchaser shall hold the stock as trustee only for the vendor.
4. All stock shall be at the risk of the purchaser upon the fall of the hammer.
5. No warranty is given by the Auctioneers with any lot, and, as all lots are available for inspection previous to the commencement of the sale, the same are sold with all faults, if any.

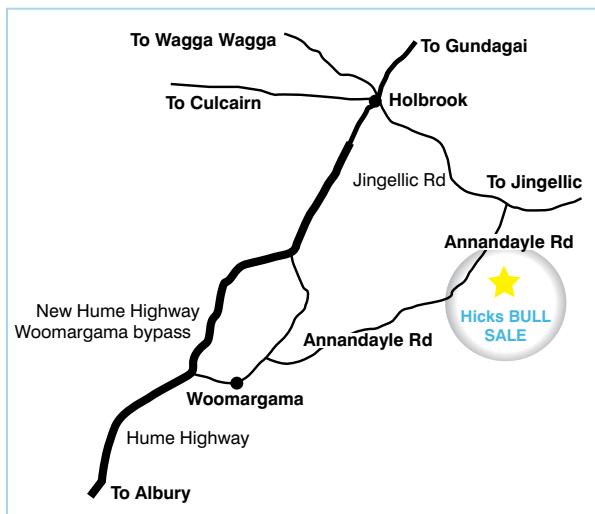

The Auctioneers shall not be responsible for any errors or omissions in any particular appearing in the description or pedigrees of any lot for sale, and no error, omission, or misdescription in such particulars or pedigrees shall invalidate the sale or be made the subject of any claim for compensation.

Directions from the South

Take the Woomargama exit to the old Hume Highway. Turn right onto Annandale Road.

Directions from the North

From Holbrook turn east down the Jingellic Road, travel 8.1kms then turn right into Annandale Road and we are 2.8kms on the left.
