Gross Misdescription

A purchaser may only claim gross misdescription where:

- (a) the age, sex or breed of the cattle delivered were obviously and substantially different to the specification included in the Catalogue;
- (b) dentition is not defined by the stock category and not described in an assessment, and is found to not correlate with the defined age of cattle/sheep
- (c) dentition is incorrectly assessed in at least 10% of the cattle in the Lot; or
- (d) AuctionsPlus has determined in its absolute discretion that any other misdescriptions constitute a gross misdescription.

Where the error occurs in dentition, the extent of price adjustment shall be determined as follows:

- (e) by negotiation between the selling Agent and purchaser; or
- (f) the matter is to be submitted to arbitration under these Operating Conditions.

LIVEWEIGHT

Acceptable degree of error by Assessor

Except where provided for under the forward contract terms, claims for misdescription may only be sought by the purchaser in the following circumstances:

1. Where the average liveweight at delivery (after adjustment for gut shrink) varies from that in the Catalogue by more than the allowed tolerance of + or - 3%.
This tolerance is applicable to all Stock Categories.

Calculation of tolerated gut shrinkage

The base time for measuring gut shrinkage is the time Livestock are assessed by the Assessor. The end time for measuring gut shrinkage is the time Livestock are weighed at delivery. Assessors should adjust the delivery weights to include the industry standard of Full minus 5% unless otherwise stated on the Assessment.

Hours off Feed	Cows	Other Livestock
	Heifers (non-yearlings)	Categories
	Percentage Loss Per Hour	
1 - 4	1.00%	0.75%
5 - 12	0.50%	0.50%

The following example is illustrative only –

Yearlings described as 380 kg by a Level 2 Assessor - 2 hours off feed and water. Cattle weighed at delivery by Purchaser at 340 kg, 9 hours off feed and water.

Calculation of gut shrinkage is as follows:

2 hours x 0.75% plus 5 hours x 0.50% = 4.00% or 15.2kg gut shrink.

Price adjustment procedure

1. Calculate the average liveweight at delivery adjusted for gut shrink.
2. Where the difference between the average liveweight in the Catalogue and the average liveweight at delivery adjusted for gut shrink is in excess of the tolerance level, the price payable, if adjustment is sought, is determined by applying a discount to the price bid of 1.5% for every 1% that the designated tolerance level is exceeded.

The following example is illustrative of the application of this adjustment –

Using the above, the adjusted liveweight at delivery is 352.2kg (340kg plus gut shrink of 15.2kg) - that is 27.8kg less than the liveweight at assessment or 7.3%. The variance is 4.3% in excess of the tolerance level for a Level 2 accredited assessor, thereby providing for an adjustment downwards of 6.45% on the price payable, should the purchaser seek the adjustment.

SLAUGHTER STOCK

Acceptable degree of error by Assessor

Claims for misdescription may only be sought by the purchaser in the following circumstances where;

1. With respect to traits that can be identified before slaughter, the accredited Assessor grossly misdescribes the Lot, and the claim is made in writing to the selling Agent prior to slaughter
2. With respect to carcass attributes including dentition, the Lot was purchased on a cents per kilogram Carcass Weight basis; or was purchased \$ per head or cents per kilogram liveweight when a cents per kilogram Carcass Weight sale was not made available by the Assessor

a. Carcase Weight acceptable degree of error –

Cows and Bulls	Other Stock Categories
+ or – 5%	+ or – 3%

Cows and Bulls	Other Stock Categories
+ or – 30%	+ or – 30%

If the tolerance is exceeded, Price Adjustment may be sought by negotiation or arbitration.

b. Fat score

Acceptable degree of error by Assessor

An acceptable assessment requires at least 70% of the number of animals to be in the fat score designated in the Catalogue and the balance in the adjacent score; additionally the number of animals in any single adjacent score must not exceed 15% of the number in the lot, even where the required 70% are as described.

A claim of misdescription may be made where:

- The number of head outside the designated Fat Scores, while in an adjacent Fat Score, exceeds 30% of the number in the lot;
- The number of head in any adjacent Fat Score exceeds 15% of the number in the lot;
- Any animal is in a Fat Score that is not adjacent to the designated Fat Scores

Price Adjustment may be sought by negotiation or arbitration on the number of animals that exceed the defined tolerances.

c. Dentition

Acceptable degree of error by Assessor

For all categories, an acceptable assessment requires at least 90% of the number of animals to exhibit the dentition designated in the Catalogue and the balance in the adjacent dentition category. For clarity, if cattle are defined as two-tooth, no more than 10% may be four-tooth, and nil may be six- or eight-tooth, otherwise price adjustment may be sought.

If Dentition is **not** defined by the stock category and **not** described in an assessment, and is found to **not** correlate with the defined age of cattle, a claim of misdescription (subject to clause 5 - 5.1 – Disputes) may be settled via negotiation or submitted to arbitration.

Example:

Steers 15-16 months, found to have 4 teeth

d. Bruising

Where a Purchaser seeks price adjustment for bruising, the following percentage adjustments will be applied to bruise scores as defined by the AUS-MEAT Language.

Bruise Score	Adjustment	
	Group A	Group B
1	2%	1%
2	2%	2%
3	4%	2%
4	2%	1%
5	5%	2%
6	6%	4%
7	5%	2%
8	9%	6%
9	15%	15%

Group A comprises calves, vealers, weaners, yearlings, steers, heifers and cows.

Group B comprises bulls and manufacturing mixed.

e. Offspring Breed

If there is a dispute that relates to any unborn offspring of purchased Livestock being incorrectly described in the Assessment, the buyer must notify AuctionsPlus and the Selling Agent within a reasonable time frame of the claimed mis-described offspring being born. A tolerance level of 10% will apply and any claimed mis-description of less than 10% of the total offspring of purchased Livestock will not be considered a dispute. The dispute will be referred to arbitration in accordance with the operating terms and conditions and the Vendor will be liable for any adjustment in sale price as determined by the arbitration panel.

Price Adjustments for Breach of Permitted Tolerances – Sheep

Any reference to Stock Category will be as per the AuctionsPlus definition of Stock Category:

Stock Category	Description	
Suckers	Unweaned lambs	No permanent incisors
Lambs	Weaned lambs	No permanent incisors
Hoggets	Any sex	Up to 2 permanent incisors
Ewes	Females	3 or more permanent incisors
Ewes & Lambs	Females with lambs at foot	
Wethers	Castrated males	3 or more permanent incisors
Ewes & Wethers	Mixed sex	3 or more permanent incisors
Rams	Entire males	1 or more permanent incisors
Goats	Any age, any sex	

Gross Misdescription

A purchaser may only claim gross misdescription where

- (a) the age, sex or breed of the Sheep delivered were obviously and substantially different to the specification included in the Catalogue.
- (b) dentition is incorrectly assessed in any animal in a Lot listed as sucker, lamb or hogget.
- (c) dentition is not defined by the stock category and not described in an assessment, and is found to not correlate with the defined age of sheep
- (d) dentition is incorrectly assessed in at least 10% of the animals in a Lot listed in a Stock Category other than sucker or lamb.

The extent of price adjustment is to be determined by negotiation between the selling Agent and the purchaser, and if settlement cannot be negotiated, the matter is to be submitted to arbitration under these Operating Conditions.

LIVEWEIGHT

Acceptable degree of error by Assessor

Claims for misdescription may only be sought by the purchaser in the following circumstances:

1. Where the average liveweight at delivery (after adjustment for gut shrink) varies from that in the Catalogue by more than the allowed tolerance of **+ or - 5%**

This tolerance is applicable to all Stock Categories.

Calculation of gut shrinkage

The following adjustments for calculation of gut shrink are applicable:

The base time for measuring gut shrinkage is the time the Sheep are Delivered ("**0 hours**"). Assessors Should adjust the Delivery weights to include an expected minimum 12-hour curfew prior to delivery, unless otherwise agreed between the parties.

1. Shrinkage to be applied from 0 hours -
 - 0.50% per hour for first six hours
 - 0.30% per hour for next six hours
 - 0.25% per hour for next twelve hours
 - 0.125% per hour for next twenty-four hours
 - 0.10% per hour for next twenty-four hours

The following example is illustrative only:

Sheep described as 54.8 kg by an Assessor - 0 hours off feed and water. Sheep weighed at delivery by Purchaser at 51.1kg - 20 hours off feed and water.

Calculation of gut shrink is as follows -

$$6 \text{ Hours} \times 0.50 = 3.00 \%$$

$$6 \text{ Hours} \times 0.30 = 1.80 \%$$

8 Hours x 0.25 = 2.00 %

= 6.80 % or 3.7 kg gut shrink

Price adjustment procedure

1. Calculate the average liveweight at delivery adjusted for gut shrink.
2. Where the difference between the average liveweight in the Catalogue and the average liveweight at delivery adjusted for gut shrink is in excess of the tolerance level, the price payable, if adjustment is sought, is determined by applying a discount to the price bid of 1.5% for every 1% that the designated tolerance level is exceeded.

SLAUGHTER STOCK

Acceptable degree of error by Assessor

Claims for misdescription may only be sought by the purchaser in the following circumstances

1. With respect to traits that can be identified before slaughter, the accredited Assessor grossly misdescribes the Lot, and the claim is made in writing to the selling Agent prior to slaughter
2. For carcase attributes including dentition, the Lot was purchased on a cents per kilogram Carcase Weight basis; or was purchased \$ per head or cents per kilo liveweight, when a cents per kilogram Carcase Weight sale was not made available by the Assessor

a. Carcase weight

Acceptable degree of error by Assessor: + or – 5%

This tolerance is applicable to all Stock Categories.

If this tolerance is exceeded, Price Adjustment may be sought by negotiation or arbitration.

b. Fat score

Acceptable degree of error by Assessor

An acceptable assessment requires at least 70% of the number of animals to be in the fat score designated in the Catalogue and the balance in the adjacent score; additionally the number of animals in any single adjacent score must not exceed 15% of the number in the lot, even where the required 70% are as described.

A claim of misdescription may be made where:

- The number of head outside the designated Fat Scores, while in an adjacent Fat Score, exceeds 30% of the number in the lot;
- The number of head in any adjacent Fat Score exceeds 15% of the number in the lot;

- Any animal is in a Fat Score that is not adjacent to the designated Fat Scores

Price Adjustment may be sought by negotiation or arbitration on the number of animals that exceed the defined tolerances.

c. Dentition

Acceptable degree of error by Assessor

For categories except Lambs, Suckers and Hoggets, an acceptable assessment requires at least 90% of the number of animals to exhibit the dentition designated in the Catalogue and the balance in the adjacent dentition category. For clarity, if sheep are defined as four-tooth, no more than 10% may be six-tooth, and nil may be eight-tooth, otherwise price adjustment may be sought.

If Dentition is **not** defined by the stock category and **not** described in an assessment, and is found to **not** correlate with the defined age of sheep, a claim of misdescription (subject to clause 5, 5.1 – Disputes) may be settled via negotiation or submitted to arbitration.

Example:

Ewes 3 years old, found to have broken mouths

Suckers/Lambs/ Hoggets	Other Stock Categories
0%	10%

Where the purchaser seeks price adjustment, the extent of price adjustment shall be determined as follows -

- (a) by negotiation between the selling Agent and purchaser; or
- (b) should agreement on price adjustment fail to be negotiated:
 - (i) the purchaser shall provide the kill data and their pricing grid as of the date of Auction;
 - (ii) price adjustment shall be determined by AuctionsPlus by application of the purchaser's grid; and
 - (iii) the value of the skin shall be adjusted according to MLA pricing data available on the day of the sale.

d. Progeny Breed

If there is a dispute that relates to any unborn offspring of purchased Livestock being incorrectly described in the Assessment, the buyer must notify AuctionsPlus and the Selling Agent within a reasonable time frame of the claimed mis-described offspring being born. A tolerance level of 10% will apply and any claimed mis-description of less than 10% of the total offspring of purchased Livestock will not be considered a dispute. The dispute will be referred to arbitration in accordance with the operating terms and conditions and the Vendor will be liable for any adjustment in sale price as determined by the arbitration panel.
