Account

C.A.S. Cowcher & Son
246 Kennedy Road
Williams 6391

All bulls and females are diligently performance recorded and are offered for sale under the Zoetis Star quality assurance program. Bulls fertility tested by Nutrien Breeding Services.

Guarantee: Bulls and females purchased at auction are guaranteed for fertility, temperament and structural soundness. The guarantee does not cover injury or disease incurred after delivery. Any claim must be accompanied by a relevant veterinary certificate.

National Bovine Johnes Assurance Score:

Willandra is a JBAS 8 property. Bulls and females are eligible for entry into all states.

Delivery: The vendors at their expense, will deliver bulls and females purchased at auction to the purchaser's property. A rebate of 50% of the freight will be offered to interstate purchasers.

Celebrating 50 YEARS of Simmental

1972 -2022

Simmentals in demand

PUREBRED and percentage simmental bulls sold at auction in WA this year have met with a keen demand.

The ten purebred bulls sold averaged \$2574 and brought prices ranging from \$1900 to a top of \$5000.

The top priced bull was Tenderloin Executive, champion simmental bull at the 1979 Perth Royal Show, bought by Quaindering stud of Williams at the Tenderloin stud's annual on-property sale.

Several purebred bulls also went to commercial herds.

There was a similar demand for percentage bulls, with a complete clearance at Tenderloin, which averaged \$1296, and Dirk Brook — average \$1422.

WA Simmental Breeders Association vice-president and publicity officer Peter Falconer of Tenderloin said he was pleased to see such demand and confidence from commercial breeders even with shadows over the beef market.

• Here, the \$5000 top price simmental bull of the year Tenderloin Executive, with new owners Charles and Beryl Cowcher of Quaindering stud, Williams.

1999 - QUAINDERING SAINT - \$6800
Purchased by Naracoopa Simmental Stud, Denmark WA

SIMMENTAL
BULLS

BREEDPLAN EBVs – HOW TO USE THEM

ESTIMATED BREEDING VALUES (EBV's)

EBV's for growth traits are shown as + or – kg.s liveweight. The animals are ranked in comparison to a breed baseline of 0 for each trait. The EBV is the best estimate of an animal's genetic merit for that trait.

ACCURACY

Accuracy (%) are presented with every EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy the lower the likelihood of change in the animal's EBV. As a general indication, accuracy below 75% should be regarded as low, 76%-85% as medium, and above 85% as high.

BIRTH WEIGHT EBV (kg)

Use this EBV to select lighter birth weights. The lower the EBV, the lighter the calves are expected at birth.

200 DAY MILK EBV (kg)

The EBV for 200 Day milk should be considered in breeding replacement females to ensure reasonable milking ability in the herd.

200 DAY GROWTH EBV (kg)

An estimation of the bull's genetic merit for growth to weaning, calculated independently of the maternal milk effect. Use the EBV in selecting bulls for vealer production.

400 DAY WEIGHT EBV (kg)

This EBV gives an estimation of the yearling weight potential. Steer and feeder producers should place most emphasis on this EBV.

600 DAY WEIGHT EBV (kg)

This EBV is an estimation of the bull's genetic potential beyond yearling age.

CARCASE TRAITS

EMA – EYE MUSCLE AREA EBV (cm²)

Estimates genetic differences in eye muscle area at the 12th/13th rib of a 300kg carcass. More positive EBVs indicate better muscling on animals.

RIB – RIB FAT EBV (mm)

Estimates the rib fat depth at the 12/13th rib of a 300kg carcass. More positive EBVs indicate more fat and earlier maturity.

RUMP – RUMP FAT EBV (mm)

Estimates the fat depth at the P8 site.

RBV – RETAIL BEEF YIELD (%)

Represents quantity of boned out meat from a carcass. Higher EBVs indicate better yielding carcasses.

PERCENTILE BANDS

This table shows where a bull's EBV is ranked against the rest of the Simmental breed in Australia and New Zealand.

Australian Simmental Selection Indexes

There are four different selection indexes calculated for Australian Simmental animals. These are:

- Domestic Maternal Index
- Export Maternal Index
- Northern Terminal Index
- Vealer Terminal Index

Each selection index describes a different production/market scenario and relates to a typical commercial herd using Simmental bulls and targeting the following specifications.

Domestic Maternal Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g.

Angus cows) targeting the domestic supermarket trade. Steers are either finished on grass or grain (e.g. 60-70 days). Steers are marketed at 430 kg live weight (240 kg HSCW and 6 mm P8 fat depth) at 14 months of age. Daughters are retained for breeding.

Export Maternal Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g.

Angus cows) targeting the export trade. Steers are finished on grain (e.g. 120 days) and marketed at 700 kg live weight (380 kg HSCW and 8 mm P8 fat depth) at 28 months of age. Daughters are retained for breeding.

Northern Terminal Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Northern Australia (e.g.

Brahman cows) targeting the export trade. Steers are finished on grass and marketed at 630 kg live weight (345 kg HSCW and 12 mm P8 fat depth) at 28 months of age. This is a terminal production system therefore no daughters are retained for breeding.

Vealer Terminal Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g.

Angus cows) targeting the vealer trade. Vealers are weaned and sold at 8 months of age weighing 350 kg (195 kg HSCW and 6 mm P8 fat depth). This is a terminal production system therefore heifers are not retained for breeding purposes.

All selection indexes are reported as an EBV, in units of relative earning capacity (\$) for a given production/market scenario. They reflect both the short term profit generated by a sire through the sale of his progeny, and the longer term profit generated by his daughters in a self-replacing cow herd (where applicable).

December 2021 SIMMENTAL TRANS TASMAN BREEDPLAN - for all 2019 born animals

Use this table as a guide to compare individual animals with the current genetic level of the breed

| | Calv-Ease | | | | Birth | | | | Growth | | | | Fert | | | | Carcase | | | | Extra | | | | Indexes | | | | | | | | | | | | | | |

RED
ANGUS
BULLS

Selecting Animals Using Red Angus Selection Indexes

The Selection Index value for an animal is effectively an EBV of the animal's profitability in a defined commercial production system and market. Ranking seedstock animals on their Selection Index value sorts them based on their progeny's expected profitability for the targeted production system.

Red Angus Selection Index Descriptions

- Supermarket (SUP) - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd targeting the domestic supermarket trade. Steers are either finished on grass or grain (e.g. 70 days). Steers are marketed at 450 kg live weight (250 kg HSCW and 12 mm P8 fat depth) at 15 months of age. Daughters are retained for breeding. In response to industry feedback regarding eating quality and tenderness, a small premium has been placed on marbling.
- Vealer (VLR) - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd targeting vealer production. Vealers are finished on grass and are marketed at 320 kg live weight (180 kg HSCW and 4 mm P8 fat depth) at 9 months of age. Daughters are retained for breeding. No marbling is required
- Northern Steer (NTH) - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Northern Australia with *Bos indicus* cows targeting grass finished steers for export. Steers are marketed at 600 kg live weight (330 kg HSCW and 10 mm P8 fat depth) at 27 months of age. Daughters are retained for breeding. In response to industry feedback regarding eating quality and tenderness, a small premium has been placed on marbling.

MAP

Willandra Simmental & Red Angus

All bulls and females at the Willandra on property sale on the 15th February 2022 will be STAR accredited.

STAR is a quality assurance program for the stud breeder that ensures steps have been taken to prevent their animals from being carriers or from transmitting preventable reproductive diseases, including *leptospirosis*, *pestivirus* and *vibriosis*.

For a commercial breeding herd, the reproductive integrity is imperative to its continued productivity. For the bull buyer, selecting a STAR accredited bull ensures that you can be confident the animal purchased will not introduce one of the preventable reproductive diseases into your herd.

To qualify to be STAR accredited, the animals are firstly tested to confirm that they are not a lifelong carrier and shedder of pestivirus, (a PI animal). Once determined to be PI free, animals are then vaccinated twice against the reproductive diseases *leptospirosis*, *pestivirus* and *vibriosis*.

Purchasers can therefore be confident that the animals they buy are not going to introduce these preventable reproductive diseases into their own herds.

It is highly recommended that all commercial producers continue to vaccinate their own herds against these diseases to prevent against the dramatic impact that reproductive disease can have on the productivity of a herd.
